

Switch and Switch + LNA Front End Solutions

Designed specifically for high-performance WiFi applications in the 2.4 GHz to 2.5 GHz ISM band, the RF5501 MMIC and RF5511 flip-chip MMIC address the need for size reduction for a typical IEEE 802.11b/g/n front end design. Featuring an integrated SP3T switch and a low noise amplifier, these solutions also reduce the number of components required outside of the core chipset. The RF5500 and RF5510, single-pole triple-throw switches, are capable of switching between WiFi receive and transmit operations, and *Bluetooth*® receive and transmit operations. These switch front end solutions meet or exceed the RF front end needs of IEEE 802.11b/g/n WiFi RF systems.

FEATURES

- Single supply voltage 3.0 V to 4.5 V
- Integrated SP3T switch and low noise amplifier
- Typical gain is 12 dB and 1.7 dB noise figure in receive mode pin-to-pin
- SP3T switch control voltage 2.1 to 5 V (3.0 V typical)
- Ideal for 2.5 GHz ISM band, portable battery-powered, and WiFi/*Bluetooth*® combination devices
