

# MS79005

# PRESSURE SENSOR DIE (0-0.5 BAR)

- 0 to 50 kPa range (500 mbar or 7.5 PSI)
- Absolute/differential pressure sensors
- RoHS-compatible & Pb-free<sup>1</sup>

## DESCRIPTION

The sensor element of the MS79005 consists of a silicon micro-machined membrane. Implanted resistors make use of the piezo-resistive effect to sense the membrane deflection and transform it in an electrical signal. This sensor, which has outstanding linearity and span values, is available in various configurations. The absolute pressure sensor employs a sealed vacuum reference cavity underneath the membrane. The Pyrex glass wafer used for this sealing has a thickness of 0.2 mm (MS79005-A\_0.2) or 0.5 mm (MS79005-A\_0.5). Two gauge versions available: one with a drilled Pyrex glass (MS79005-D) and the other without Pyrex glass (MS79005-S).

## FEATURES

- R6+ : Reference Resistor 6: positive access
- R6- : Reference Resistor 6: negative access

<sup>1</sup> The European RoHS directive 2002/95/EC (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment) bans the use of lead, mercury, cadmium, hexavalent chromium and polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

## BOND PAD CONFIGUTRATION

### Important remarks:

As the sensing elements are diffused resistances, the voltage applied on the ground pads (GND1 and GND2) has to be lower than the voltage applied on supply voltage pad (Vs+).

The epitaxial layer is connected to the Vs+ pin under the pad.

Gold ball bonding or aluminium wedge bonding can be used to wire-bond the sensor. The quality of the wire-bonding is equipment and process dependant. For this reason, it is strongly recommended that a thorough wire-bonding qualification is made by the end user if the sensor is going to be operated over an extended temperature range.

### NOTES

- 1) Reference Resistors R5 and R6 have the same specifications as the bridge resistances.
- 2) Deviation at one half full-scale pressure from the least squares best line fit over pressure range (0 to 0.5 bar).
- 3) Slope of the endpoint straight line from  $25^\circ\text{C}$  to  $60^\circ\text{C}$ .
- 4) Output deviation at any pressure within the specified range, when this pressure is cycled to and from the minimum or maximum rated pressure, at  $25^\circ\text{C}$ .
- 5) Same as 4) after 10 pressure cycles
- 6) Maximum difference in offset after one thermal cycle from  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$ .

### PICKING TOOLS

The MS79005 sensors have a sensitive membrane size of  $0.74 \times 0.74 \text{ mm}$  and outer dimensions of  $1.78 \times 1.78 \text{ mm}$  (MS79005-A\_0.2, MS79005-A\_0.5 and MS79005-D) and  $1.81 \times 1.81 \text{ mm}$  (MS79005-S). The pick and place tool has to be of a soft material such as rubber (Hardness 78-97 Shore A). Its external size must fit the sensor and the vacuum cavity must be as large as the membrane itself. Successful tests have been made with specific SPT tools, see SPT drawing and references below.

Ensure that the ejection pins do not touch the membrane for gauge versions.

SPT references	RTR-A1-060x060
External dimension	TL & TW: 0.06 inch / 1.52 mm
Internal dimensions	$\varnothing H$ : 0.035 inch / 0.89 mm
