**Performance Characteristic**

**(A) Electrical**

| Characteristics                           | Test Methods/Description   | Specifications                   |  |
|---|--|----------------------------------|--|
| Standard Test Condition                   | Environmental conditions under which every measuring is done without doubt on the measuring results. Unless specially specified. Temperature. Relative humidity are 5 to 35°C 45 to 85%RH.                             | —                                |  |
| Maximum Allowable Voltage                 | The maximum sinusoidal RMS voltage or maximum DC voltage that can be applied continuously in the specified environmental temperature range.  | To meet the specified value      |  |
| Varistor Voltage                          | The voltage between two terminals with the specified measuring current $I_m$ A DC applied is called $V_c$ or $V_{cmA}$ , the measurement shall be made as fast as fast as possible to avoid heat affection.            |                                  |  |
| Clamping Voltage                          | The maximum voltage between two terminals with the specified standard impulse current (8/20 $\mu$ s) illustrated below applied.<br> |                                  |  |
| Peak Current (Withstanding Surge Current) | 2 times  |                                  | The maximum current within the varistor voltage change of $\pm 10\%$ with the standard impulse current (8/20 $\mu$ s) applied two times with an interval of 5 minutes. |
|   | 1 times  |                                  | The maximum current within the varistor voltage change of $\pm 10\%$ the standard impulse current (8/20 $\mu$ s) applied one time.                                     |
| Maximum Energy                            | The maximum energy within the varistor voltage change of $\pm 10\%$ when one impulse of 2 ms or 10/1000 $\mu$ s is applied.  |                                  |  |
| Rated Power                               | The power that can be applied in the specified ambient temperature.  |                                  |  |
| Capacitance                               | Capacitance shall be measured at 1 kHz $\pm 10\%$ , 1 Vrms max.(1Mhz below 100pF). 0V bias and 20 $\pm 2^\circ$ C  |                                  |  |
| Dissipation Factor                        | Dissipation Factor shall be measured at 1 KHz $\pm 10\%$ , 1 Vrms max.(1Mhz + %10 below 100pF). 0V bias and 20 $\pm 2^\circ$ C   |                                  |  |
| Temperature Confident of Varistor Voltage | $\frac{V_c \text{ at } 85^\circ\text{C} - V_c \text{ at } 105^\circ\text{C}}{V_c \text{ at } 25^\circ\text{C}} \times \frac{1}{60} \times 100(\% / .^\circ\text{C})$   | $\pm 0.05\% / ^\circ\text{Cmax}$ |  |
| Withstanding Voltage (Body Insulation)    | The specified voltage shall be applied both terminals of the specimen connected together and metal foil closely wrapped round its body for 1 minute. Electrical Breakdown shall be examined.                           |                                  |  |
|   | Classification(Nominal varistor voltage)   | Test Voltage(AC)                 |  |
|   | VO.1mA. V1mA $\leq$ 330V   | 1000 Vrms                        |  |
| VO.1ma. V1mA $>$ 330V                     | 1500 Vrms  |                                  |  |

TO BE CONTINUED

| Characteristics          | Test Methods/Description  | Specifications                         |                   |   |  |
|--------------------------|---|--|-------------------|---|--|
| Impulse Life (I)         | The change of Vc shall be measured after the impulse listed below is applied 10000 times continuously with the interval of the seconds at room temperature. | $\Delta V_{cmA}/V_{cmA} \leq \pm 10\%$ |                   |   |  |
|                          |   |  | 05D Series        | VCR-05D180L to VCR-05D680K  | 0.5A (2ms)                             |
|                          |   |  |                   | VCR-05D820K to VCR-05D681K  | 20A (8/20 $\mu$ s)                     |
|                          |   |  | 07D Series        | VCR-07D180K to VCR-07D680K  | 18A (8/20 $\mu$ s)                     |
|                          |   |  |                   | VCR-07D820K to VCR-07D471K  | 50A (8/20 $\mu$ s)                     |
|                          |   |  | 10D Series        | VCR-10D180K to VCR-10D680K  | 50A (8/20 $\mu$ s)                     |
|                          |   |  |                   | VCR-10D820K to VCR-10D112K  | 100A (8/20 $\mu$ s)                    |
|                          |   |  | 14D Series        | VCR-14D180K to VCR-14D680K  | 75A (8/20 $\mu$ s)                     |
|                          |   |  |                   | VCR-14D820K to VCR-14D112K  | 150A (8/20 $\mu$ s)                    |
|                          |   |  | 20D Series        | VCR-20D180K to VCR-20D680K  | 120A (8/20 $\mu$ s)                    |
|                          |   |  |                   | VCR-20D820K to VCR-20D182K  | 200A (8/20 $\mu$ s)                    |
|                          |   |  | Impulse Life (II) | The change of Vc shall be measured after the impulse listed below is applied 10000 times continuously with the interval of the seconds at room temperature. | $\Delta V_{cmA}/V_{cmA} \leq \pm 10\%$ |
| 05D Series               | VCR-05D180L to VCR-05D680K  | 0.45A (2ms)                            |                   |   |  |
|                          | VCR-05D820K to VCR-05D681K  | 14A (8/20 $\mu$ s)                     |                   |   |  |
| 07D Series               | VCR-07D180K to VCR-07D680K  | 12A (8/20 $\mu$ s)                     |                   |   |  |
|                          | VCR-07D820K to VCR-07D471K  | 35A (8/20 $\mu$ s)                     |                   |   |  |
| 10D Series               | VCR-10D180K to VCR-10D680K  | 35A (8/20 $\mu$ s)                     |                   |   |  |
|                          | VCR-10D820K to VCR-10D112K  | 70A (8/20 $\mu$ s)                     |                   |   |  |
| 14D Series               | VCR-14D180K to VCR-14D680K  | 45A (8/20 $\mu$ s)                     |                   |   |  |
|                          | VCR-14D820K to VCR-14D112K  | 90A (8/20 $\mu$ s)                     |                   |   |  |
| 20D Series               | VCR-20D180K to VCR-20D680K  | 55A (8/20 $\mu$ s)                     |                   |   |  |
|                          | VCR-20D820K to VCR-20D182K  | 100A (8/20 $\mu$ s)                    |                   |   |  |
| Impulse Response Time    | Time lag Between Application of surge and varistor's "turn-on" conduction action.   | <50 nanoseconds                        |                   |   |  |
| DC Leakage Current       | Maximum current with rated DC voltage applied   | 200 $\mu$ A max.                       |                   |   |  |
| Current/Energy Detecting | Detecting of Maximum Values when operated above 85°C  | -2.5%/°C                               |                   |   |  |

## (B) Mechanical

| Characteristics                      | Test Methods/Description  | Specifications   |       |          |              |          |              |         |               |                       |
|--------------------------------------|---|--|-------|----------|--------------|----------|--------------|---------|---------------|-----------------------|
| Robustness of Terminations (Tensile) | After gradually applying the force specified below and keeping the unit fixed for ten seconds. The terminal shall be visually examined for any damage.<br><table border="1"> <thead> <tr> <th>Terminal diameter</th> <th>Force</th> </tr> </thead> <tbody> <tr> <td>Ø0.6mm</td> <td>9.8N(1.0Kgf)</td> </tr> <tr> <td>Ø 0.8mm</td> <td>9.8N(1.0Kgf)</td> </tr> <tr> <td>Ø 1.0mm</td> <td>19.6N(2.0Kgf)</td> </tr> </tbody> </table>  | Terminal diameter  | Force | Ø0.6mm   | 9.8N(1.0Kgf) | Ø 0.8mm  | 9.8N(1.0Kgf) | Ø 1.0mm | 19.6N(2.0Kgf) |                       |
| Terminal diameter                    | Force   |  |       |          |              |          |              |         |               |                       |
| Ø0.6mm                               | 9.8N(1.0Kgf)  |  |       |          |              |          |              |         |               |                       |
| Ø 0.8mm                              | 9.8N(1.0Kgf)  |  |       |          |              |          |              |         |               |                       |
| Ø 1.0mm                              | 19.6N(2.0Kgf)   |  |       |          |              |          |              |         |               |                       |
| Robustness of Terminations (Bending) | The unit shall be secured with its terminal vertical and the force specified below be applied in the axial direction. The terminal shall gradually be bent by 90° in one direction. Then 90° in the opposite. Direction, and again back to the original position. The damage of the terminal shall be visually examined.<br><table border="1"> <thead> <tr> <th>Terminal diameter</th> <th>Force</th> </tr> </thead> <tbody> <tr> <td>Ø 0.6 mm</td> <td>9.8N(1.0Kgf)</td> </tr> <tr> <td>Ø 0.8 mm</td> <td>9.8N(1.0Kgf)</td> </tr> <tr> <td>Ø 1.0mm</td> <td>19.6N(2.0Kgf)</td> </tr> </tbody> </table> | Terminal diameter  | Force | Ø 0.6 mm | 9.8N(1.0Kgf) | Ø 0.8 mm | 9.8N(1.0Kgf) | Ø 1.0mm | 19.6N(2.0Kgf) | No outstanding damage |
