

DESCRIPTION

The 1N4775 thru 1N4784A series of Zero-TC Reference Diodes provides a selection of 8.5 V nominal voltages and temperature coefficients to as low as 0.0005%/°C for minimal voltage change with temperature when operated at 7.5 mA. Options for screening similar to JAN, JANTX, JANTXV, and JANS also exist by using MQ, MX, MV or MSP respectively for part number prefixes and high reliability screening. Microsemi also offers numerous other Zener Reference Diode products for a variety of other voltages from 6.2 V to 200 V

APPEARANCE

**DO-7
(DO-204AA)**

IMPORTANT: For the most current data, consult MICROSEMI's website: <http://www.microsemi.com>

FEATURES

- JEDEC registered 1N4775 thru 1N4784A series
- Standard reference voltage of 8.5 V +/- 5%
- Internal metallurgical bonds
- Options for screening in accordance with MIL-PRF-19500 for JAN, JANTX, JANTXV, and JANS are available by adding MQ, MX, MV, or MSP prefixes respectively to part numbers. For example, designate "MX1N4779A" for a JANTX, or MV1N4784A for a JANTXV screen.
- Radiation Hardened devices available by changing the "1N" prefix to "RH", e.g. RH4779A, RH4784A, etc. Also consult factory for "RH" data sheet brochure for other radiation hardened reference diode products.

APPLICATIONS / BENEFITS

- Provides minimal voltage changes over a broad temperature range for instrumentation and other circuit designs requiring a voltage reference
- Temperature coefficient selections available from 0.01%/°C to 0.0005%/°C
- Tight voltage tolerances available by adding tolerance 1%, 2%, 3%, etc. after part number for further identification, e.g. 1N4773A-2%, 1N4774A-1%, 1N4769-3%, 1N4769A-1%, etc.
- Flexible axial-leaded mounting terminals
- Nonsensitive to ESD per MIL-STD-750 Method 1020

MAXIMUM RATINGS

- Operating & Storage Temperature: -65°C to +175°C
- DC Power Dissipation: 250 mW @ T_L = 25°C
NOTE: For optimum voltage-temperature stability, the test current I_{ZT} = 0.5 or 1.0 mA as shown in Electrical Characteristics (less than 10 mW in dissipated power)
- Solder temperatures: 260 °C for 10 s (maximum)

MECHANICAL AND PACKAGING

- CASE: Hermetically sealed glass case with DO-7 (DO-204AA) package
- TERMINALS: Tin-lead plated and solderable per MIL-STD-750, Method 2026
- MARKING: Part number and cathode band
- POLARITY: Reference diode to be operated with the banded end positive with respect to the opposite end
- TAPE & REEL option: Standard per EIA-296 (add "TR" suffix to part number)
- WEIGHT: 0.2 grams.
- See package dimensions on last page

*JEDEC Registered Data.

NOTES:

1. Designate Radiation Hardened devices with "RH" prefix instead of "1N," i.e., RH4784A. Consult factory for TX, TXV or JANS equivalent SCDs.
2. Measured by superimposing I_Z ac rms on I_Z dc @ 25°C where I_Z ac rms = 10% I_Z dc.
3. Maximum allowable change between any two discrete temperatures over the specified temperature change.
4. When ordering devices with a tighter tolerance than specified, use a nominal center voltage of 8.4 volts.
5. Voltage measurements to be performed 15 seconds after application of dc current.
