

DESCRIPTION

This "fast recovery" rectifier diode series is military qualified to MIL-PRF-19500/429 and is ideal for high-reliability applications where a failure cannot be tolerated. These industry-recognized 1.0 Amp rated rectifiers for working peak reverse voltages from 200 to 1000 volts are hermetically sealed with voidless-glass construction using an internal "Category I" metallurgical bond. These devices are also available in surface mount MELF package configurations by adding a "US" suffix (see separate data sheet for 1N5615US thru 1N5623US). Microsemi also offers numerous other rectifier products to meet higher and lower current ratings with various recovery time speed requirements including fast and ultrafast device types in both through-hole and surface mount packages.

These ambient ratings are for PC boards where thermal resistance from mounting point to ambient is sufficiently controlled where T_{J(max)} does not exceed 175°C.

NOTE 2: T_A = 100°C, f = 60 Hz, I_O = 750 mA for ten 8.3 ms surges @ 1 minute intervals

NOTE 3: I_F = 0.5 A, I_{RM} = 1 A, I_{R(REC)} = 0.250 A
