

23C16 STATIC READ ONLY MEMORY (2048x8)

DESCRIPTION

The 23C16 high performance read only memory is organized 2048 words by 8 bits with access times of less than 450 ns. This ROM is designed to be compatible with all microprocessor and similar applications where high performance, large bit storage and simple interfacing are important design considerations.

The 23C16 operates totally asynchronously. No clock input is required. The three programmable chip select inputs allow eight 16K ROMs to be OR-tied without external decoding.

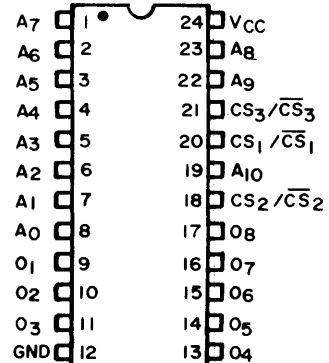

Designed to replace two 2708 8K EPROMs, the 23C16 can eliminate the need to redesign printed circuit boards for volume mask programmed ROMs after prototyping with EPROMs.

- 400mV Noise Immunity on Inputs
- 2048 x 8 Bit Organization
- Single +5 Volt Supply
- Access Time — 450 ns
- Totally Static Operation
- TTL Compatible
- Three-State Outputs for Wire-OR Expansion
- Three Programmable Chip Selects
- Pin Compatible with 2716 EPROM
- Replacement for two 2708s
- 2708/2716 EPROMs Accepted as Program Data Inputs
