

## 2 Watt DC/DC Converters for LAN Transceiver Chips

### Key Features

- Meets FCC Section 15, Sub Part J, A and B
- Continuous short circuit protection with foldback on 2E models
- No derating to 71° C
- Wide input range

The LAN series of DC/DC converters is designed to provide power and isolation for Local Area Network (LAN) transceiver chips. The LAN series covers both the Cheapernet and Ethernet LAN (IEEE 802.3 - 10 base 5 and 10 base 2 Standards) approach. The use of a compact and inexpensive DC/DC converter as a power source for these transceiver chips allows conversion of the normal bus power to the isolated power required. The series operates from inputs of 5 and 12 VDC for Cheapernet with input/output isolation of 500 VDC. Ethernet converters offer a wide input range of 10.20 to 15.75 VDC with 2500 VDC isolation.
