Capacitance values in pF

L1, L2 – Silver-plated brass rod, 1 1/2" long and 1/4" dia. Install at least 1/2" from nearest vertical chassis surface

L3 – 1/2 turn #16 AWG wire, located 1/4" from and *parallel* to L2.

– External interlead shield to isolate collector lead from emitter and base leads.

Neutralization Procedure

(A) Connect 450-MHz signal generator (with R_S = 50 ohms) to input terminals of amplifier.

(B) Connect 50-ohm RF voltmeter across output terminals of amplifier.

(C) Apply V_{EE}, and with signal generator adjusted for 5 mV output from amplifier, tune C1, C3, and C4 for maximum output.

(D) Interchange connections to signal generator and RF voltmeter.

(E) With sufficient signal applied to output terminals of amplifier, adjust C2 for minimum indication at input.

(F) Repeat steps (A), (B), and (C) to determine if retuning is necessary.
