2N5190G, 2N5191G, 2N5192G

Silicon NPN Power Transistors

Silicon NPN power transistors are for use in power amplifier and switching circuits, – excellent safe area limits. Complement to PNP 2N5194, 2N5195.

Features

- Epoxy Meets UL 94 V-0 @ 0.125 in.
- These Devices are Pb-Free and are RoHS Compliant*

MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Collector–Emitter Voltage 2N5190G 2N5191G 2N5192G	V _{CEO}	40 60 80	Vdc
Collector-Base Voltage 2N5190G 2N5191G 2N5192G	V _{CBO}	40 60 80	Vdc
Emitter-Base Voltage	V _{EBO}	5.0	Vdc
Collector Current	۱ _C	4.0	Adc
Base Current	Ι _Β	1.0	Adc
Total Device Dissipation @ T _C = 25°C Derate above 25°C	P _D	40 320	W mW/°C
Operating and Storage Junction Temperature Range	T _J , T _{stg}	-65 to +150	°C
ESD – Human Body Model	HBM	3B	V
ESD – Machine Model	MM	С	V

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

THERMAL CHARACTERISTICS

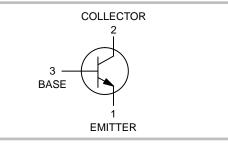

Characteristic	Symbol	Max	Unit
Thermal Resistance, Junction-to-Case	R_{\thetaJC}	3.12	°C/W

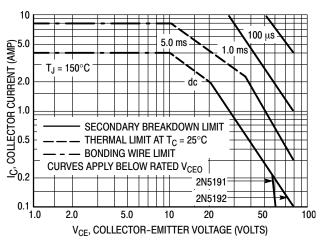

Figure 11. Rating and Thermal Data Active–Region Safe Operating Area

There are two limitations on the power handling ability of a transistor; average junction temperature and second breakdown. Safe operating area curves indicate I $_{\rm C}$ – V $_{\rm CE}$ limits of the transistor that must be observed for reliable operation; i.e., the transistor must not be subjected to greater dissipation than the curves indicate.

The data of Figure 11 is based on $T_{J(pk)} = 150 \text{ °C}$; T_C is variable depending on conditions. Second breakdown pulse limits are valid for duty cycles to 10% provided $T_{J(pk)} \le 150 \text{ °C}$. At high case temperatures, thermal limitations will reduce the power that can be handled to values less than the limitations imposed by second breakdown.

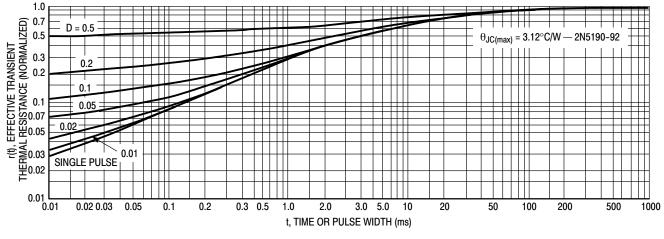

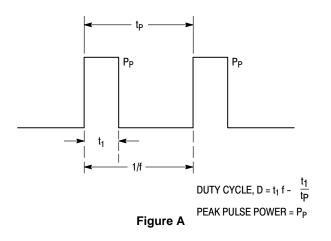

Figure 12. Thermal Response

A train of periodical power pulses can be represented by the model shown in Figure A. Using the model and the device thermal response, the normalized effective transient thermal resistance of Figure 12 was calculated for various duty cycles.

To find $\theta_{JC}(t)$, multiply the value obtained from Figure 12 by the steady state value θ_{JC} .

Example:

The 2N5190 is dissipating 50 watts under the following conditions: $t_1 = 0.1$ ms, $t_p = 0.5$ ms. (D = 0.2).

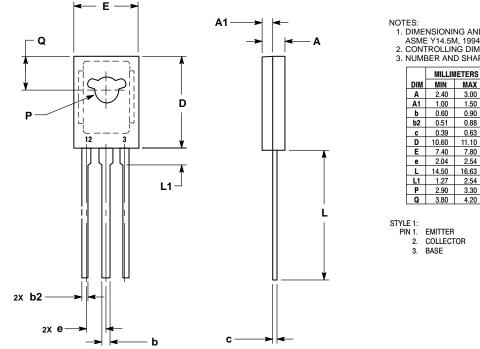

Using Figure 12, at a pulse width of 0.1 ms and D = 0.2, the reading of $r(t_1, D)$ is 0.27.

The peak rise in function temperature is therefore:

 $\Delta T = r(t) \times P_P \times \theta_{JC} = 0.27 \times 50 \times 3.12 = 42.2^{\circ}C$
