2N5754 - 2N5757

T2303 T2313 Series

2.5-A Silicon Triacs

Features:

- 25/40 mA IGT
- Shorted-Emitter, Center-Gate Design
- Low Switching Losses
- Low On-State Voltage at High Current Levels

Voltage	100 V Types	200 V Types	400 V Types	600 V Types
Package				
Modified TO-5 (T2303 Series)	2N5754	2N5755	2N5756	2N5757
Modified TO-5 with Heat Rad. (T2313-Series)	T2313A (40684)	T2313B (40685)	T2313D (40686)	T2313M (40687)

Numbers in parentheses (e.g. 40684) are former RCA type numbers.

These RCA triacs are gate-controlled full-wave silicon ac switches that are designed to switch from an off-state to an on-state for either polarity of applied voltage with positive or negative gate triggering voltages.

The gate sensitivity of these triacs permits the use of economical transistorized control circuits and enhances their use in low-power phase control and load-switching applications.

MAXIMUM RATINGS, Absolute-Maximum Values:

For operation with sinusoidal supply voltage at frequencies up to 50/60 Hz and with resistive or inductive load.

NOTE: For incandescent lamp loads which produce burnout current surges with I^2t values greater than 2.5 ampere² seconds, connect a 10-ohm resistor of appropriate power rating in series with the load. This rating can be determined as follows:
Power Rating of 10-ohm Resistor = $10(\text{rms load current})^2$
