# SERVICE MANUAL

CHASSIS : LP62C

FACTORY MODEL : 37LC2R-TH / 42LC2R-TH

**MODEL : 37LC2R / 42LC2R**

## CAUTION

BEFORE SERVICING THE CHASSIS,  
READ THE SAFETY PRECAUTIONS IN THIS MANUAL.

# SAFETY PRECAUTIONS

## IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by  $\triangle$  in the Schematic Diagram and Replacement Parts List.

It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent X-RADIATION, Shock, Fire, or other Hazards.

Do not modify the original design without permission of manufacturer.

### General Guidance

An **isolation Transformer should always be used** during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and its components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse (or Fusible Resistor) in this TV receiver is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1W), keep the resistor 10mm away from PCB.

Keep wires away from high voltage or high temperature parts.

### X-RAY Radiation

#### Warning:

The source of X-RAY RADIATION in this TV receiver is the High Voltage Section and the LCD PANEL.

For continued X-RAY RADIATION protection, the replacement panel must be the same type panel as specified in the Replacement Parts List.

To determine the presence of high voltage, use an accurate high impedance HV meter.

Adjust brightness, color, contrast controls to minimum.

Measure the high voltage.

The meter reading should indicate

$23.5 \pm 1.5KV$ : 14-19 inch,  $26 \pm 1.5KV$ : 19-21 inch,

$29.0 \pm 1.5KV$ : 25-29 inch,  $30.0 \pm 1.5KV$ : 32 inch

If the meter indication is out of tolerance, immediate service and correction is required to prevent the possibility of premature component failure.

### Before returning the receiver to the customer,

always perform an **AC leakage current check** on the exposed metallic parts of the cabinet, such as antennas, terminals, etc., to be sure the set is safe to operate without damage of electrical shock.

#### Leakage Current Cold Check (Antenna Cold Check)

With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.

If the exposed metallic part has a return path to the chassis, the measured resistance should be between  $1M\Omega$  and  $5.2M\Omega$ .

When the exposed metal has no return path to the chassis the reading must be infinite.

An other abnormality exists that must be corrected before the receiver is returned to the customer.

#### Leakage Current Hot Check (See below Figure)

Plug the AC cord directly into the AC outlet.

**Do not use a line Isolation Transformer during this check.**

Connect 1.5K/10watt resistor in parallel with a 0.15uF capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts.

Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity.

Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which corresponds to 0.5mA.

In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

#### Leakage Current Hot Check circuit

# SERVICING PRECAUTIONS

**CAUTION:** Before servicing receivers covered by this service manual and its supplements and addenda, read and follow the *SAFETY PRECAUTIONS* on page 3 of this publication.

**NOTE:** If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

## General Servicing Precautions

1. Always unplug the receiver AC power cord from the AC power source before;
  - a. Removing or reinstalling any component, circuit board module or any other receiver assembly.
  - b. Disconnecting or reconnecting any receiver electrical plug or other electrical connection.
  - c. Connecting a test substitute in parallel with an electrolytic capacitor in the receiver.  
**CAUTION:** A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.

2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc) equipped with a suitable high voltage probe. Do not test high voltage by "drawing an arc".

3. Do not spray chemicals on or near this receiver or any of its assemblies.

4. Unless specified otherwise in this service manual, clean electrical contacts only by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable non-abrasive applicator; 10% (by volume) Acetone and 90% (by volume) isopropyl alcohol (90%-99% strength)

**CAUTION:** This is a flammable mixture.

Unless specified otherwise in this service manual, lubrication of contacts is not required.

5. Do not defeat any plug/socket B+ voltage interlocks with which receivers covered by this service manual might be equipped.
6. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.
7. Always connect the test receiver ground lead to the receiver chassis ground before connecting the test receiver positive lead. Always remove the test receiver ground lead last.
8. Use with this receiver only the test fixtures specified in this service manual.

**CAUTION:** Do not connect the test fixture ground strap to any heat sink in this receiver.

## Electrostatically Sensitive (ES) Devices

Some semiconductor (solid-state) devices can be damaged easily by static electricity. Such components commonly are called *Electrostatically Sensitive (ES) Devices*. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed to prevent potential shock reasons prior to applying power to the

unit under test.

2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material.)
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.  
**CAUTION:** Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

## General Soldering Guidelines

1. Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range of 500 °F to 600 °F.
2. Use an appropriate gauge of RMA resin-core solder composed of 60 parts tin/40 parts lead.
3. Keep the soldering iron tip clean and well tinned.
4. Thoroughly clean the surfaces to be soldered. Use a mall wire-bristle (0.5 inch, or 1.25cm) brush with a metal handle. Do not use freon-propelled spray-on cleaners.
5. Use the following unsoldering technique
  - a. Allow the soldering iron tip to reach normal temperature. (500 °F to 600 °F)
  - b. Heat the component lead until the solder melts.
  - c. Quickly draw the melted solder with an anti-static, suction-type solder removal device or with solder braid.  
**CAUTION:** Work quickly to avoid overheating the circuitboard printed foil.
6. Use the following soldering technique.
  - a. Allow the soldering iron tip to reach a normal temperature (500 °F to 600 °F)
  - b. First, hold the soldering iron tip and solder the strand against the component lead until the solder melts.
  - c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.  
**CAUTION:** Work quickly to avoid overheating the circuit board printed foil.
  - d. Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

## IC Remove/Replacement

Some chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

### Removal

1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

### Replacement

1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to the areas).

## "Small-Signal" Discrete Transistor

### Removal/Replacement

1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a "U" shape the end of each of three leads remaining on the circuit board.
3. Bend into a "U" shape the replacement transistor leads.
4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact then solder each connection.

## Power Output, Transistor Device

### Removal/Replacement

1. Heat and remove all solder from around the transistor leads.
2. Remove the heat sink mounting screw (if so equipped).
3. Carefully remove the transistor from the heat sink of the circuit board.
4. Insert new transistor in the circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heat sink.

## Diode Removal/Replacement

1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicularly to the circuit board.
3. Observing diode polarity, wrap each lead of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two "original" leads. If they are not shiny, reheat them and if necessary, apply additional solder.

## Fuse and Conventional Resistor

### Removal/Replacement

1. Clip each fuse or resistor lead at top of the circuit board hollow stake.
2. Securely crimp the leads of replacement component around notch at stake top.
3. Solder the connections.

**CAUTION:** Maintain original spacing between the replaced component and adjacent components and the circuit board to prevent excessive component temperatures.

## Circuit Board Foil Repair

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board causing the foil to separate from or "lift-off" the board. The following guidelines and procedures should be followed whenever this condition is encountered.

### At IC Connections

To repair a defective copper pattern at IC connections use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections).

1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary).
2. Carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.
3. Bend a small "U" in one end of a small gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.
4. Route the jumper wire along the path of the out-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area and clip off any excess jumper wire.

### At Other Connections

Use the following technique to repair the defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

1. Remove the defective copper pattern with a sharp knife. Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
  2. Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
  3. Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side. Carefully crimp and solder the connections.
- CAUTION:** Be sure the insulated jumper wire is dressed so the it does not touch components or sharp edges.

# SPECIFICATION

NOTE : Specifications and others are subject to change without notice for improvement.

## 1. Application range

This specification is applied to LP62C chassis.

## 2. Requirement for Test

Testing for standard of each part must be followed in below condition.

- (1) Temperature : 25°C±5°C(77±9°F), CST : 40±5
- (2) Humidity : 65%±10%
- (3) Power : Standard input voltage (AC 100-240V, 50/60Hz)  
\*Standard Voltage of each products is marked by models
- (4) Specification and performance of each parts are followed each drawing and specification by part number in accordance with BOM.
- (5) The receiver must be operated for about 20 minutes prior to the adjustment.

## 3. Test method

- 3.1 Performance : LGE TV test method followed
- 3.2 Demanded other specification  
Safety : CE, IEC Specification  
EMC : CE, IEC

## 4. General TV Specification

No	Item	Specification	Remark

12	1366 x 768	47.700	60.00	84.62	WXGA(42XGA,50", 60")

## 12. HDMI input ( DTV )

No	Resolution	H-freq(kHz)	V-freq.(kHz)	Pixel clock(MHz)	Remarks
1.	720 x 480	31.47	59.94	27.000	SDTV 480P
2.	720 x 480	31.50	60.00	27.027	SDTV 480P
3.	720 x 576	31.25	50.00	27.000	SDTV 576P
4.	1280 x 720	44.96	59.94	74.176	HDTV 720P
5.	1280 x 720	45.00	60.00	74.250	HDTV 720P
6.	1280 x 720	37.50	50.00	74.25	HDTV 720P 50Hz
7.	1920 x 1080	33.72	59.94	74.176	HDTV 1080I
8.	1920 x 1080	33.75	60.00	74.250	HDTV 1080I
9.	1920 x 1080	28.125	50.00	74.250	HDTV 1080I 50Hz

## 13. Mechanical Specification

### 13.1. 37LC2R

No	Item	Content				Remark	
		Width	Length	Height	Unit		
1.	Product Dimension	Before Packing	944	286	726	mm	SET(With Stand)
		After Packing	1052	383	855	mm	
		Product Weight	Only SET	31			
		With BOX	33.3			Kg	

### 13.2. 42LC2R

No	Item	Content				Remark	
		Width	Length	Height	Unit		
1.	Product Dimension	Before Packing	1054	286	813.5	mm	SET(With Stand)
		After Packing	1166	402	950	mm	
		Product Weight	Only SET	37			
		With BOX	42.3			Kg	

# ADJUSTMENT INSTRUCTION

## 1. Application Range

This spec. sheet is applied to all of the LP62A/B/C chassis(H3-High) manufactured at LG TV Plant all over the world.

## 2. Specification

- 2.1 Because this is not a hot chassis, it is not necessary to use an isolation transformer. However, the use of isolation transformer will help to protect test instruments.
- 2.2 Adjustment must be done in the correct sequence.
- 2.3 The adjustment must be performed at 25± 5°C temperature and 65± 10% relative humidity if there is no specified designation.
- 2.4 The input voltage of the receiver must be kept between 100~220V, 50/60Hz.
- 2.5 Before adjustment, execute Heat-Run for 30 minutes at RF no signal

## 3. Adjustment items

### 3.1 PCB assembly adjustment items

- Channel memory
- Download the channel data from BOM to EEPROM by using LGIDS.
- Option adjustment following BOM
- Tool Option1
- Tool Option2
- Area Option

(Fig. 1)

- 1) Push the ADJ key in the Adjust Remocon.
  - 2) Input the Option Number that was specified in the BOM, into the Shipping area.
  - 3) Select "Tool Option1/ Tool Option2/ Area Option" by using ▲/▼(CH+/-) key, and press the number key(0~9) consecutively
- ex) If the value of Tool Option1 is 7, input the data using number key "7" (Fig. 1)

### 3.2 SET assembly adjustment items

- Auto AV(ZH-AV3, TH-AV1) Color Balance
- Aging (by Power on key)
- Adjustment of White Balance
- Auto Component Color Balance adjustment
  - Standard equipment : MSPG925FA
- Auto RGB Color Balance adjustment
  - Standard equipment : MSPG925FA

## 4. EDID

### Caution

- \* Use the proper signal cable for EDID Download
  - Analog EDID : Pin3 exists
  - Digital EDID : Pin3 exists
- => Caution: - Never connect HDMI & DVI-D & DVI-A Cable at the same time.
- Use the proper cables below for EDID Writing

### 4.1 EDID Data

#### 4.1.1. ANALOG(256 Bytes)

##### • BLOCK1 (128BYTE)

	00	01	02	03	04	05	06	07	08	09	0A	0B	0C	0D	0E	0F

=> Detail EDID Options are below (a, b, c, d, e)

#### a. Product ID

Model Name	Product ID	Product ID		
		Dec	Hex	EDID table
37LC2R	30059(A)	30059	756B	6B75
	30060(D)	30060	756C	6C75
42LC2R	40023(A)	40023	9C57	579C
	40024(D)	40024	9C58	589C

b. Serial No : Controlled on production line

c. Month, Year : Controlled on production line:

ex) Montly : '03' => '03'

Year : '2005' => '0F'

d. Model Name/Monitor Name:

Model Name																				
37LC2R-TH	00	00	00	FC	00	33	37	4C	43	32	52	2D	54	48	0A	20	20	20		
42LC2R-TH	00	00	00	FC	00	34	32	4C	43	32	52	2D	54	48	0A	20	20	20		

e. Checksum: Changeable by total EDID data

Master pattern generator like MSPG-925)

- If Minimum Black Level and/or Maximum White Level is not correct, Do select 100% Color Bar Pattern.

(Fig. 2)

## 5. ADC Calibration

### 5.1 Adjustment of RF/AV/S-VIDEO

\* Required Equipments

- Remote controller for adjustment
- 802F Pattern Generator, Master (MSPG-925FA), etc.
- MSPG-925FA Pattern Generator  
(Which has Video Signal: 100% Color Bar Pattern shown in Fig. 1)

⇒ Model : 202 / Pattern: 33 (PAL : ZH, TH)

Model : 201 / Pattern : 33 (NTSC : MH)

(Fig. 1)

#### 5.2.1 Method of Auto Component Color Balance

- 1) Input the Component 720p 100% Color Bar(MSPG-925FA model:217, pattern:33) signal into Component.  
(ZH : component , TH/MH : component 1 or 2)
- 2) Set the PSM to Standard mode in the Picture menu.
- 3) Press the INSTART key on R/C for adjustment.
- 4) Press the ►(Vol. +) key to operate the set , then it becomes automatically.
- 5) Auto-RGB OK means the adjustment is completed.

### 5.3 Adjustment of RGB

\* Required Equipments

- Remote controller for adjustment
- 802F Pattern Generator, Master (MSPG-925FA), etc.
- MSPG-925FA Pattern Generator

(Which has XGA [1024x768] 60Hz PC Format output signal : 100% Color Bar Pattern shown in Fig. 3 )

- It is very important to use correct adjustment pattern like Fig. 10.

- Within the pattern, color sequence should be aligned : W-Y-C-G-M-R-BLUE-BLACK

(If color sequence is reversed (Black ->...-> White), reverse the pattern with REV key, when using Master pattern generator like MSPG-925)

- If Minimum Black Level and/or Maximum White Level is not correct, Do select 100% Color Bar Pattern.

(Fig. 3)

#### 5.1.1 Method of Auto RF/AV/S-VIDEO Color Balance.

- 1) Press the FRONT-AV KEY on R/C for converting input mode.
- 2) Input the Video Signal: 100% Color Bar signal into AV3(ZH), AV1(TH), VIDEO1(MH)
- 3) Set the PSM to Standard mode in the Picture menu.
- 4) Press INSTART key on R/C for adjustment.
- 5) Press the ►(Vol.+) key to operate the set, then it becomes automatically
- 6) Auto-RGB OK means the adjustment is completed

#### 5.1.2 Requirement

- This AV color balance adjustment should be performed before White Balance Adjustment.
- After color balance adjustment, You must push "power on" key. ("Power on" key is "Access Heat\_run mode")

### 5.2 Adjustment of Component.

\* Required Equipments

- Remote controller for adjustment
- 802F Pattern Generator, Master (MSPG-925FA), etc.
- MSPG-925FA Pattern Generator  
(Which has 720p YPbPr signal : 100% Color Bar Pattern shown in Fig. 2 )

⇒ Model: 217 / Pattern: 33

- It is very important to use correct adjustment pattern like Fig. 2.  
- Within the pattern, color sequence should be aligned : W-Y-C-G-M-R-BLUE-BLACK  
(If color sequence is reversed (Black -> ... -> White), reverse the pattern with REV key, when using

#### 5.3.1 Method of Auto RGB Color Balance

- 1) Input the PC 1024x768@60Hz 1/2 Black&White Pattern (MSPG-925FA model:3, pattern:33) into RGB.
- 2) Set the PSM to Standard mode in Picture menu.
- 3) Press the INSTART key on R/C for adjustment.
- 4) Press the ►(Vol. +) key operate To set , then it becomes automatically.
- 5) Auto-RGB OK means adjustment is completed.

=> **Caution : Before White-balance, the AV ADC should be done. (ZH:AV3, TH:AV1, MH:VIDEO1)**

=> **After Aging, When the procedure is changed White balance adjustment, it will be canceled Heat\_run mode auto.**

(Notice : Before White-balance, change input mode Move to AV3(ZH) or AV1(TH) or VIDEO1(MH) by using the FRONT-AV KEY on Remote controller.)

## 6. White Balance

White balance		ZH(AV3), TH(AV1)	MH(VIDEO1)
MSPG925FA	216 Level (85IRE)	Model : 202	Model : 201
	Full screen pattern	• Pal Video	• NTSC Video

=> **Caution :** - System control RS-232 Host should be "PC" for adjustment.

- AV ADC(ZH: AV3, TH : AV1, MH: VIDEO1) should be done before White-balance.

### \* Test Equipment

Color Analyzer (CA-110)

PC(For communication through RS-232C)=>UART

Baud rate : 115200

Pattern Generator (MSPG-925FA etc.)

\*Target Value [ PSM: Standard(ZH/TH), CSM: Normal]

- Normal(9300K±1000K) x:283±0.015, y: 298±0.015

-Luminance(Y) AV/COMP: 250 Cd/m2 (Typ: 300 Cd/m2)

PC : 300 Cd/m2 (Typ: 350 Cd/m2)

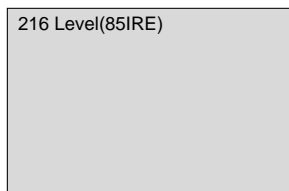

=> Reference Value(Automatically fixed)

- Cool(11000K±1000K)

- Warm(7200K±1000K)

## 6.1 Manual white Balance (AV)

- 1) Execute CA-110 Zero Calibration.
- 2) Execute the SET Heat Run for 30minutes
- 3) As below Fig. 4, Supply 216Level (85 IRE) full screen pattern to Video input.  
37LC2R-ZH,42LC2R-ZH : AV3/AV4 (Input 50Hz),  
32LB1R-TH : AV1/AV2 (Input 50Hz)
- 4) Press the FRONT-AV KEY on R/C for converting input mode.
- 5) Set the PSM to Standard mode in Picture menu.
- 6) Enter the White Balance adjustment mode by pressing the INSTART key twice(White Balance) on R/C.
- 7) Stick sensor to center of the screen and select each items (Red/Green/Blue Gain and Offset) using ▲▼(CH+/-) key on R/C.
- 8)Adjust Only High Light with R Gain/B Gain using ◀▶ (VOL +/-) key on R/C.
- 9) Adjust it until color coordination becomes as below.  
X-axis : 0.283±0.003  
Y-axis : 0.298±0.003  
(R/G/B gain and R/G/B offset Default values are different in according to using module )
- 10) Adjust High light with R/B Gain.

(Fig.4)

## 6.2 Auto white Balance (AV)

# SVC REMOCON

NO	KEY	FUNTION	REAMARK
1	POWER	To turn the TV on or off	
2	POWER ON	To turn the TV on automatically if the power is supplied to the TV. (Use the POWER key to deactivate): It should be deactivated when delivered.	
3	MUTE	To activate the mute function.	
4	P-CHECK	To check TV screen image easily.	Shortcut keys
5	S-CHECK	To check TV screen sound easily	Shortcut keys
6	ARC	To select size of the main screen (Normal, Spectacle, Wide or Zoom)	Shortcut keys
7	CAPTION	Switch to closed caption broadcasting	
8	TXT	To toggle on/off the teletext mode	
9	TV/AV	To select an external input for the TV screen	
10	TURBO SOUND	To start turbo sound	
11	TURBO PICTURE	To start turbo picture	
12	IN-START	To enter adjustment mode when manufacturing the TV sets. To adjust the screen voltage (automatic): In-start → mute → Adjust → AV(Enter into W/B adjustment mode) W/B adjustment (automatic): After adjusting the screen → W/B adjustment → Exit two times (Adjustment completed)	Use the AV key to enter the screen W/B adjustment mode.
13	ADJ	To enter into the adjustment mode. To adjust horizontal line and sub-brightness.	
14	MPX	To select the multiple sound mode (Mono, Stereo or Foreign language)	
15	EXIT	To release the adjustment mode	
16	APC(PSM)	To easily adjust the screen according to surrounding brightness	
17	ASC(SSM)	To easily adjust sound according to the program type	
18	MULTIMEDIA	To check component input	Shortcut keys
19	FRONT-AV	To check the front AV	Shortcut keys
20	CH±	To move channel up/down or to select a function displayed on the screen.	
21	VOL±	To adjust the volume or accurately control a specific function.	
22	ENTER	To set a specific function or complete setting.	
23	PIP CH-(OP1)	To move the channel down in the PIP screen To use as a red key in the teletext mode	
24	PIP CH+(OP2)	To move the channel in the PIP screen To use as a green key in the teletext mode	
25	PIP SWAP(OP3)	To switch between the main and sub screens. To use as a yellow key in the teletext mode	
26	PIP INPUT(OP4)	To select the input status in the PIP screen To use as a blue key in the teletext mode	
27	EYE	To set a function that will automatically adjust screen status to match the surrounding brightness so natural color can be displayed.	
28	MENU	To select the functions such as video, voice, function or channel.	
29	IN-STOP	To set the delivery condition status after manufacturing the TV set.	
30	STILL	To halt the main screen in the normal mode, or the sub screen at the PIP screen. Used as a hold key in the teletext mode (Page updating is stopped.)	
31	TIME	Displays the teletext time in the normal mode Enables to select the sub code in the teletext mode	
32	SIZE	Used as the size key in the PIP screen in the normal mode Used as the size key in the teletext mode	
33	MULTI PIP	Used as the index key in the teletext mode (Top index will be displayed if it is the top text.)	
34	POSITION	To select the position of the PIP screen in the normal mode Used as the update key in the teletext mode (Text will be displayed if the current page is updated.)	
35	MODE	Used as Mode in the teletext mode	
36	PIP	To select the simultaneous screen	
37	TILT	To adjust screen tilt	Shortcut keys
38	0~9	To manually select the channel.	

# TROUBLESHOOTING

## 1. No power

## 2. VSC Board

### 2-1. No Power

#### (1) Symptom

- 1) Minute discharge doesn't occur at module.
- 2) Front LED doesn't come into action

#### (2). Check follow

After remove the cable connect to Power Board(except the CN101 connection cable), authorizes the AC voltage marking on manual.  
When ST-BY 5V does not operate, replace Power Board.

## 2-2. No Raster - LCD

### (1) Symptom

- 1) Does't minute discharge at module.
- 2) It maintains the condition where the front LED is normal.

### (2) Check follow

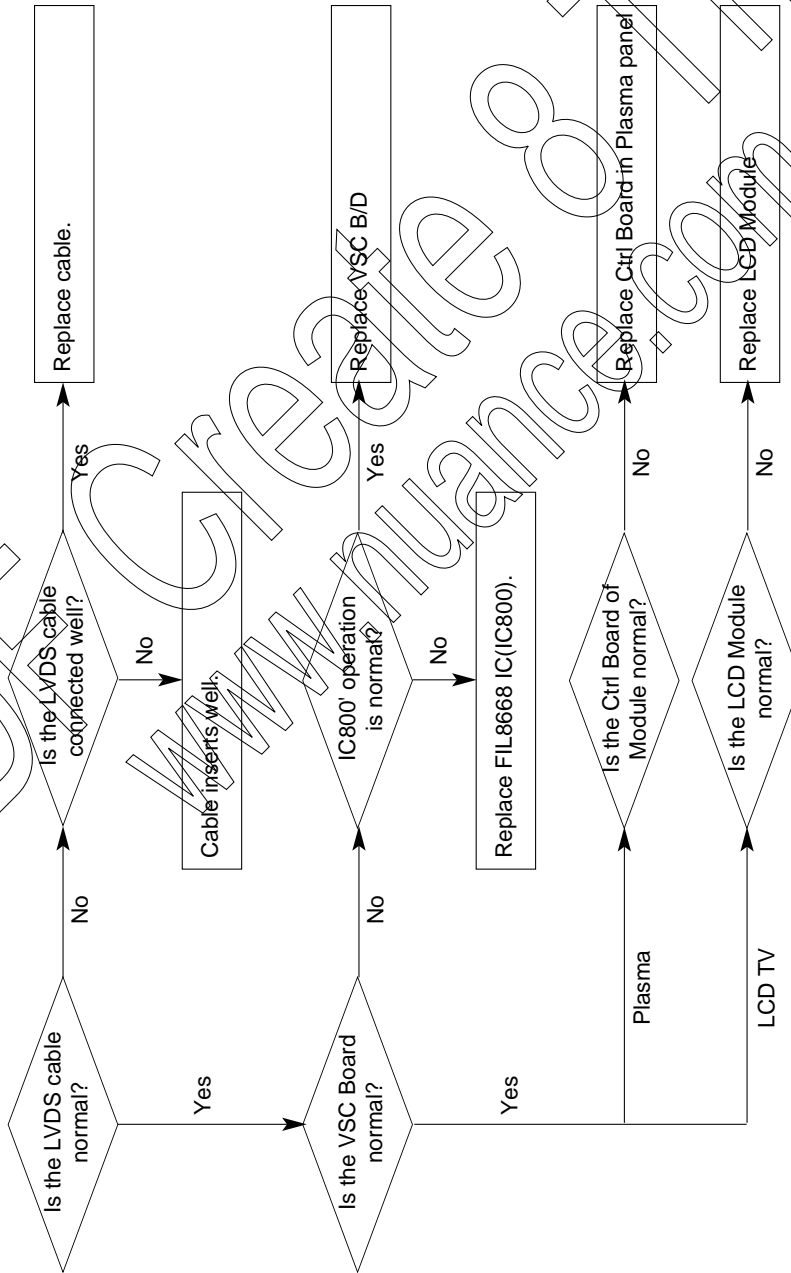

### 2-3. In case of occur strange screen into specific mode

2-3-1. In case of doesn't display the OSD

(1) Symptom

- 1) LED is White
- 2) The minute discharge work continuously

(2) Check follow

**2-3-2. In the case of doesn't work normally at specific input mode**

**(1) Symptom**

1) The screen doesn't work normally at specific input mode (RF, AV, Component, RGB, HDMI)

**(2) Check follow**

- 1) Check the all input model if all input display normally.
- 2) Check the PIP and Double Window if it display normally. (Re-Check it Swap)

**(3) In case of unusual situation from RF mode**

**(4) When set doesn't display normally at RF , AV mode**

**(5) When set doesn't display normally at Component, RGB mode**

**(6) In the case of becomes unusual display from HDMI mode**

**2-4. In case of no sound**

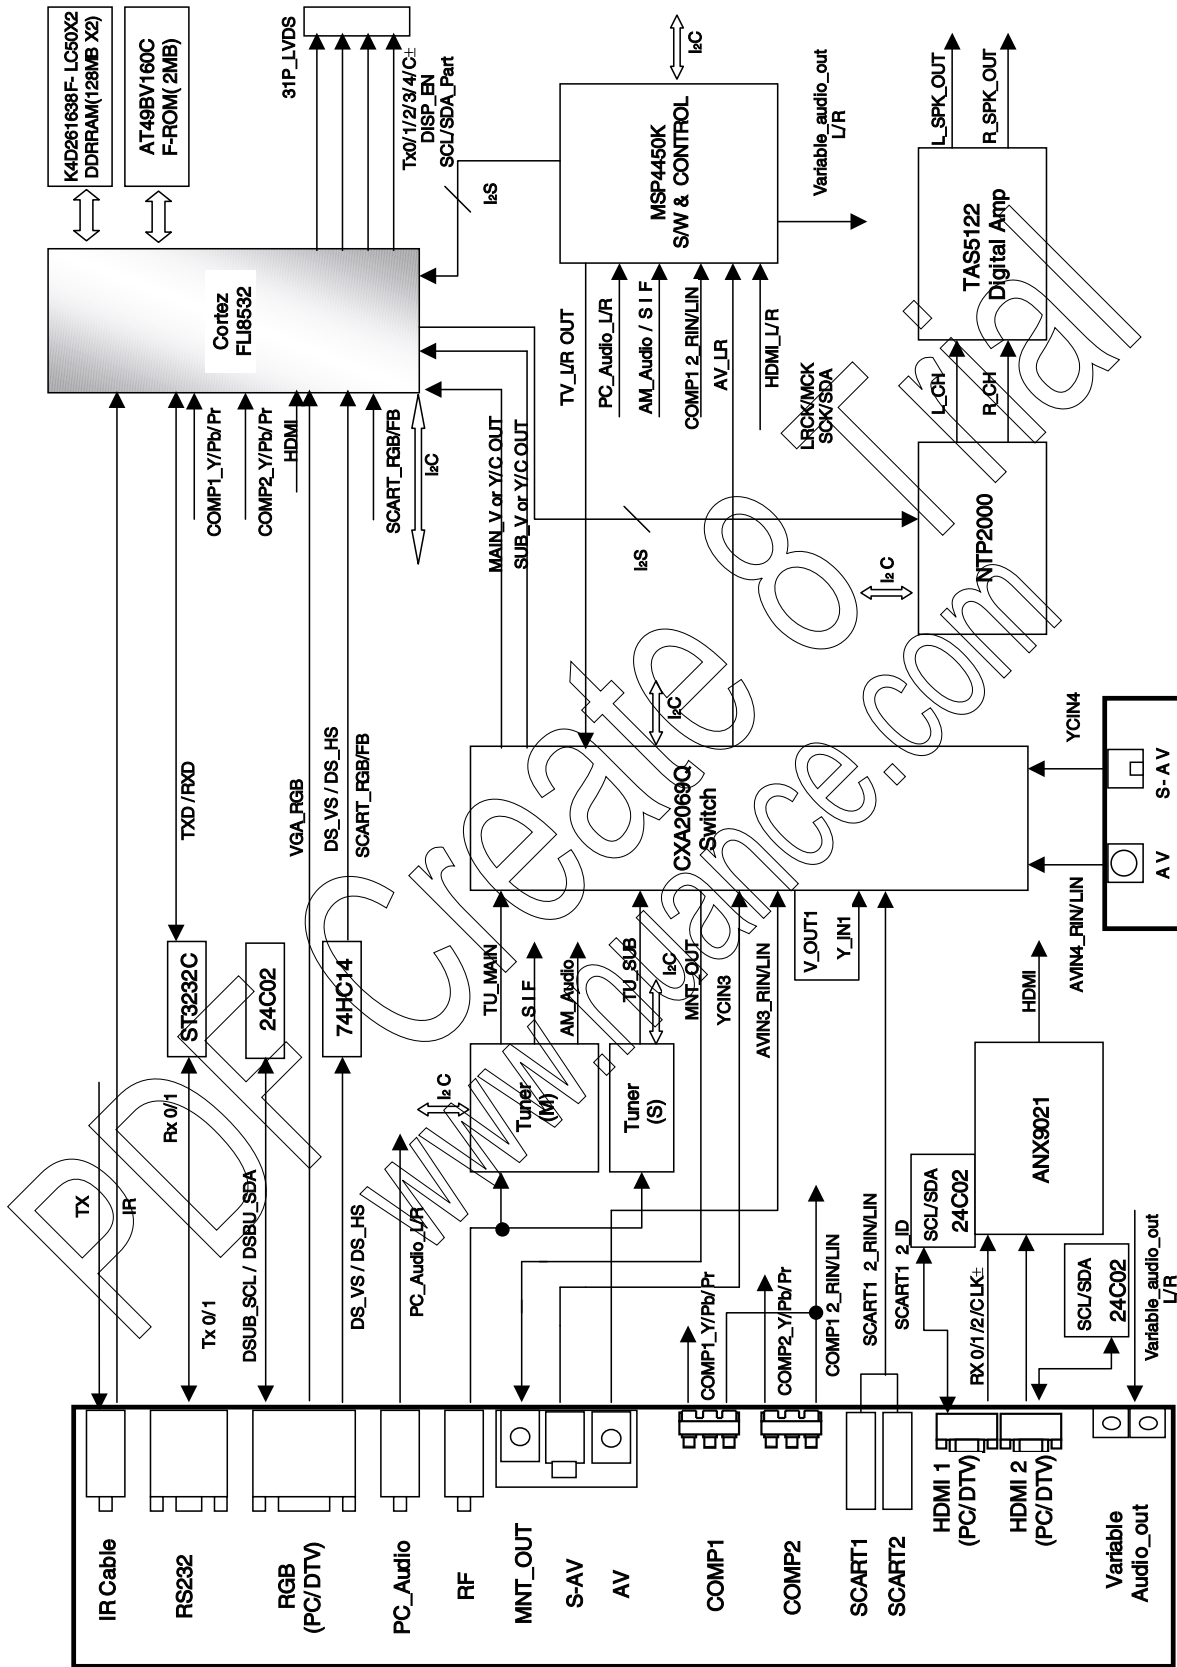

**(1) Symptom**

- 1) LED is White
- 2) Screen existent, but Sound isn't

**(2) Check follow**

# REPLACEMENT PARTS LIST

For Capacitor & Resistors, the characters at 2nd and 3rd digit in the P/No. means as follows;

CC, CX, CK, CN, CH : Ceramic  
CQ : Polyester  
CE : Electrolytic  
CF : Fixed Film

RD : Carbon Film  
RS : Metal Oxide Film  
RN : Metal Film  
RH : CHIP, Metal Glazed(Chip)  
RR : Drawing
