

3875081 G E SOLID STATE

Small-Signal MOSFETs

3N128, 3N143

Silicon MOS Transistor

For Amplifier Mixer & Oscillator Applications in Military & Industrial VHF Communications Equipment Operating up to 250 MHz

Features:

- Large dynamic range
- Greatly reduces spurious responses in receiver front ends
- Permits use of vacuum-tube biasing techniques
- Excellent thermal stability
- Superior crossmodulation capability

Applications:

- VHF amplifiers, mixers, converters and if-amplifiers in communication receivers
- High impedance timing circuits
- Detectors, oscillators, frequency multipliers, phase splitters, pulse stretchers and current limiters
- Electrometer amplifiers
- Voltage-controlled attenuators
- High impedance differential amplifiers

RCA-3N128 and 3N143* are N-channel depletion-type silicon field-effect transistors utilizing the MOS construction. The 3N128 is intended primarily for VHF amplifier service in military and industrial applications. It also is extremely well suited for use in dc and low-frequency amplifier applications requiring a transistor having high power gain, very high input impedance, and low gate leakage.

The 3N143 is designed for use as a VHF mixer and oscillator. Because of their improved transfer characteristic and increased dynamic range the 3N128 and 3N143 provide substantially better cross-modulation performance in linear amplifier applications than conventional (bipolar) transistors and are free from

diodecurrent loading common to junction type FET's. These transistors are hermetically sealed in JEDEC TO-72 metal packages and utilize full-gate construction.

Application data for RCA-3N128, including biasing requirements, basic circuit configurations, selection of optimum operating point, and methods for automatic gain control are given in RCA Application Note AN-3193, "Application Considerations for the RCA-3N128 VHF MOS Field-Effect Transistor".

* Formerly Developmental Nos. TA2840 and TA7275, respectively.

Maximum Ratings, Absolute-Maximum Values:

DRAIN-TO-SOURCE VOLTAGE, V_{DS}	+ 20 max. V
GATE-TO-SOURCE VOLTAGE, V_{GS} :	
Continuous dc.....	+ 1, - 8 max. V
Peak ac.....	± 15 max. V
DRAIN CURRENT, I_D (PULSED).....	.50 mA
Peak duration ≤ 20 ms, duty factor ≤ 0.15	
TRANSISTOR DISSIPATION, P_T :	
At ambient } up to 25°C.....	.400 mW
temperatures } above 25°C.....	derate at 2.67 mW/°C
AMBIENT TEMPERATURE RANGE:	
Storage and Operating.....	- 65 to + 175°C
LEAD TEMPERATURE (During Soldering):	
At distances not closer than 1/32 inch to seating surface for 10 seconds maximum.....	265 max. °C

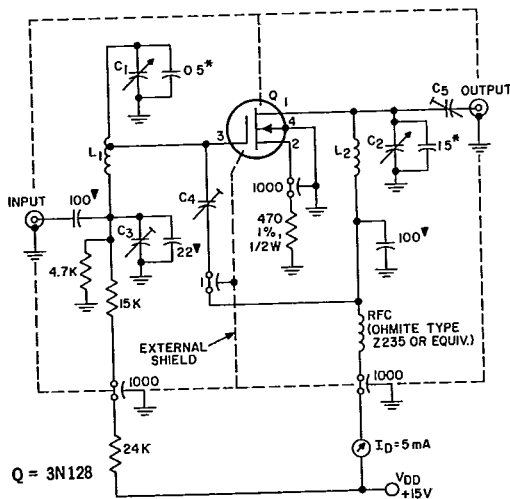

ELECTRICAL CHARACTERISTICS: (At $T_A = 25^\circ\text{C}$)

Measured with Substrate Connected to Source Unless Otherwise Specified.

OPERATING CONSIDERATIONS

The flexible leads of the 3N128 and 3N143 are usually soldered to the circuit elements. As in the case of any high-frequency semiconductor device, the tips of soldering irons should be grounded, and appropriate precautions should be taken to protect the devices against high electric fields.

These devices should not be connected into or disconnected from circuits with the power on because high transient voltages may cause permanent damage to the devices.
