FIGURE 10 - POWER GAIN AND NOISE FIGURE versus SOURCE RESISTANCE (See Schematic Figure 12)

The Test Circuit shown in Figure 12 was used to generate Power Gain and Noise Figure as a function of Source Resistance curves.

FIGURE 11 - THIRD ORDER INTERMODULATION DISTORTION (See Schematic Figure 12)

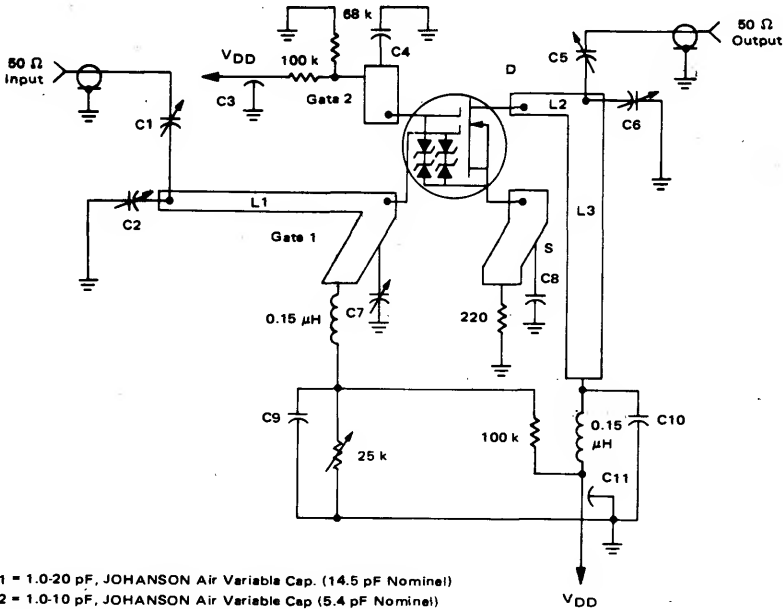

Figure 11 shows the typical third order intermodulation distortion (IMD) performance of the 3N209 and 3N210 at 500 MHz.

Both fundamental output and third order IMD output characteristics are plotted. The curves have been extrapolated to show the third order intermodulation output intercept point.

The performance is typical for I_D between 5.0 mAdc and 10 mAdc. The test circuit shown in Figure 12 was used to generate the IMD Data.
