

8-bit μ P-compatible D/A converter

5018

FEATURES

- 8-bit resolution
- Input latches
- Low-loading data inputs
- On-chip voltage reference
- Output buffer amplifier
- Accurate to $\pm 1/2$ LSB (0.19%)
- Monotonic to 8 bits
- Amplifier and reference both short-circuit protected
- Compatible with 8085, 68000 and many other μ Ps

APPLICATIONS

- Precision 8-bit D/A converters
- A/D converters
- Programmable power supplies
- Test equipment
- Measuring instruments
- Analog-digital multiplication

DESCRIPTION

The 5018 is a complete 8-bit digital-to-analog converter subsystem on one monolithic chip. The data inputs have input latches, controlled by a latch enable pin. The data and latch enable inputs are ultra-low loading for easy interfacing with all logic systems. The latches appear transparent when the \overline{LE} input is in the low state. When \overline{LE} goes high, the input data present at the moment of transition is latched and retained until \overline{LE} again goes low. This feature allows easy compatibility with most microprocessors.

The chip also comprises a stable voltage reference (5V nominal) and high slew rate buffer amplifier. The voltage reference may be externally trimmed with a potentiometer for easy adjustment of full scale, while maintaining a low temperature coefficient.

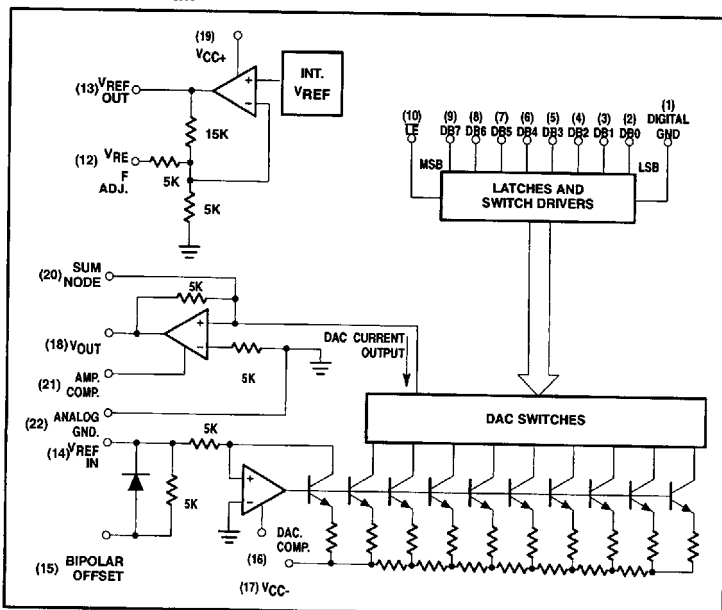

The output of the buffer amplifier may be offset so as to provide bipolar as well as unipolar operation.

NOTES:

- Operation beyond limits in the table may impair the useful life of the device.
- Refer to Figure 1.
- Refer to Figure 2.
- See Figure 5.
- See Figure 6.
- See Figure 7.
- See Figure 8.
- See Figure 9.
- For reference currents $> 3\text{mA}$, use of an external buffer is required.
