

OVERVIEW

The 5087 series are LVDS output oscillator ICs that operate with 300MHz to 700MHz SAW resonators. The series includes devices with $f_0/4$ frequency output (mask option), making them ideal for low frequency SAW oscillators as low as 75MHz. They are specialized for SAW oscillators, realizing smaller chip size compared to existing products. They feature low jitter, miniature LVDS output oscillator to use in high-speed serial interface applications.

FEATURES

- 2.375 to 3.6V operating supply voltage range
- Recommended oscillation frequency range: 300MHz to 700MHz (varies with version)
- Output frequency range: 75MHz to 700MHz
 $f_0, f_0/2, f_0/4$ output frequency, determined by internal connection
- Output rise time/Output fall time: 400ps (max)
- -40 to +85°C operating temperature range
- LVDS output
- Standby function
Outputs are high impedance when OE is LOW. (oscillator stops)
- Power-saving pull-up resistor built-in (OE pin)
- BiCMOS process
- Wafer form (WF5087xx)
- Chip form (CF5087xx)

SERIES CONFIGURATION

Version *1	Recommended crystal unit/resonator	Recommended oscillation frequency range *2 [MHz]	Built-in capacitance *3 [pF]		Output frequency
			C _{XIN}	C _{XOUT}	
5087A1	SAW	300 to 500	6	8	f_0
5087A2					$f_0/2$
5087A3					$f_0/4$
5087B1		500 to 700	5	5	f_0
5087B2					$f_0/2$
5087B3					$f_0/4$

*1. It becomes WF5087xx in case of the wafer form and CF5087xx in case of the chip form.

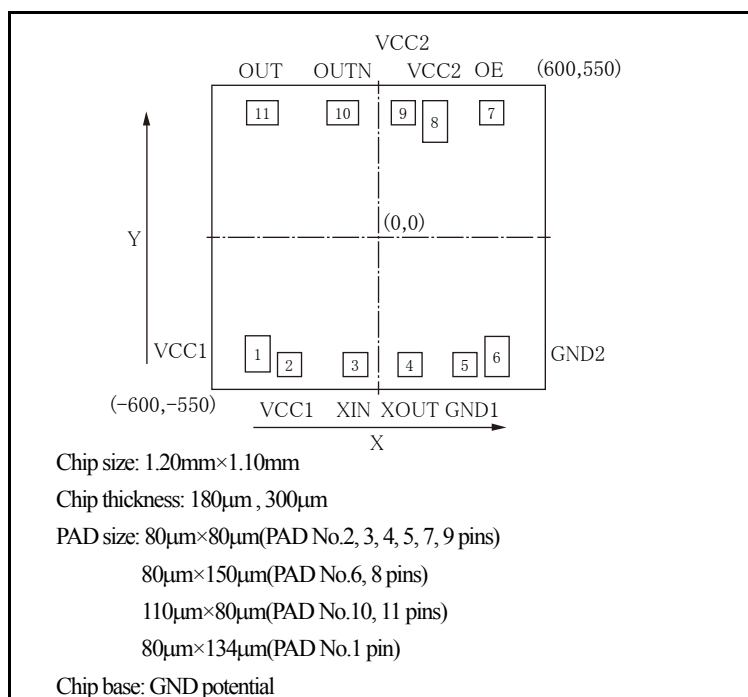

*2. The recommended oscillation frequency is a yardstick value derived from the resonator used for NPC characteristics authentication. However, the oscillation frequency range is not guaranteed. Specifically, the characteristics can vary greatly due to resonator characteristics and mounting conditions, so the oscillation characteristics of components must be carefully evaluated.

*3. The built-in oscillation capacitance contains parasitic capacitance.

ORDERING INFORMATION

Device	Package	Version name

CF5087xx-x	Chip form	

PAD LAYOUT

(Unit: μm)

PIN DESCRIPTION and PAD COORDINATES

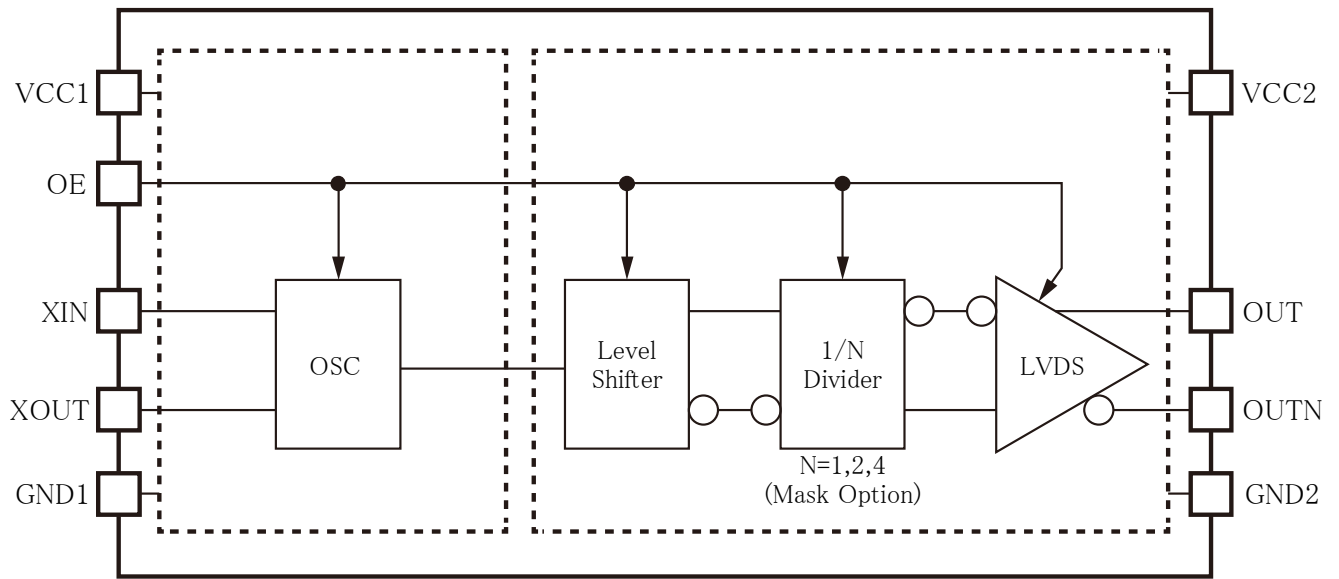

No.	Name	i/o ^{*1}	Function	PAD coordinate [μm]	
				X	Y
1	VCC1 ^{*2}	-	(+) supply pin (for oscillation circuit)	-395	-424
2	VCC1 ^{*2}	-		-290	-440
3	XIN	i	Oscillator input pin	-72	-440
4	XOUT	o	Oscillator output pin	107	-440
5	GND1 ^{*3}	-	(-) ground pin (for oscillation circuit)	290	-440
6	GND2 ^{*3}	-	(-) ground pin (for all circuits excluding oscillation circuit)	395	-440
7	OE	i	Output enable pin. Outputs are high impedance when LOW (oscillator stopped). Power-saving pull-up resistor built-in.	377	440
8	VCC2 ^{*2}	-	(+) supply pin (for all circuits excluding oscillation circuit)	190	440
9	VCC2 ^{*2}	-		85	440
10	OUTN	o	LVDS complementary output pin. Disable: High impedance	-114	440
11	OUT	o	LVDS output pin. Disable: High impedance	-380	440

*1. i: input, o: output

*2. Connect both of pins by wire-bonding for good characteristics.

*3. GND1 and GND2 pins should be connected by wire-bonding since they are disconnected.

BLOCK DIAGRAM

SPECIFICATIONS

Absolute Maximum Ratings

 $V_{SS}=0V$

Parameter	Symbol	Condition	Rating	Unit
Supply voltage range ^{*1}	V_{CC}	VCC1, VCC2 pins	-0.3 to +5.0	V
Input voltage range ^{*1*2}	V_{IN}	XIN, OE pins	-0.3 to $V_{CC}+0.3$	V
Output voltage range ^{*1*2}	V_{OUT}	XOUT, OUT/OUTN pins	-0.3 to $V_{CC}+0.3$	V
Junction temperature ^{*3}	T_j		+125	°C
Storage temperature range ^{*4}	T_{STG}	Chip form, Wafer form	-55 to +125	°C

*1. This parameter rating is the values that must never exceed even for a moment. This product may suffer breakdown if this parameter rating is exceeded.

Operation and characteristics are guaranteed only when the product is operated at recommended operating conditions.

*2. V_{CC} is a V_{CC} value of recommended operating conditions.

*3. Do not exceed the absolute maximum ratings. If they are exceeded, a characteristic and reliability will be degraded.

*4. When stored in nitrogen or vacuum atmosphere applied to IC itself only (excluding packaging materials).

Recommended Operating Conditions

 $V_{SS}=0V$

Parameter	Symbol	Conditions	Rating			Unit
			MIN	TYP	MAX	
Operating supply voltage	V_{CC}	Between VCC1 and GND pins Between VCC2 and GND pins	2.375		3.6	V
Operating supply voltage difference	ΔV_{CC}	Voltage difference between VCC1 and VCC2 pins	-0.1		+0.1	V
Input voltage	V_{IN}	XIN, OE pins	0		V_{CC}	V
Operating temperature	T_a		-40		+85	°C
Output load	R_L	Between OUT and OUTN pins	99	100	101	Ω
Oscillation frequency range ^{*1}	f_0	5087Ax	300		500	MHz
		5087Bx	500		700	
Output frequency range	f_{OUT}	5087A1	300		500	MHz
		5087A2	150		250	
		5087A3	75		125	
		5087B1	500		700	
		5087B2	250		350	
		5087B3	125		175	

*1. The oscillation frequency is a yardstick value derived from the resonator used for NPC characteristics authentication. However, the oscillation frequency range is not guaranteed. Specifically, the characteristics can vary greatly due to crystal characteristics and mounting conditions, so the oscillation characteristics of components must be carefully evaluated.

Note. Since it may influence the reliability if it is used out of range of recommended operating conditions, this product should be used within this range.

5087 series

Electrical Characteristics

3.3V operation

$V_{CC}=3.0$ to $3.6V$, $GND=0V$, $T_a= -40$ to $+85^{\circ}C$ unless otherwise noted.

Parameter	Symbol	Conditions	Rating			Unit	
			MIN	TYP	MAX		
Current consumption	I_{CC}	Measurement circuit 1, OE=Open		49	70	mA	
Standby current	I_{STB}	Measurement circuit 1, OE=Low			30	μA	
High-level output voltage	V_{OH}	Measurement circuit 2, OE=Open, $R_L=100\Omega$ OUT/OUTN pins		1.43	1.6	V	
Low-level output voltage	V_{OL}		0.9	1.1		V	
Differential output voltage	V_{OD}	Measurement circuit 2, OE=Open, $R_L=100\Omega$ OUT/OUTN pins	247	330	454	mV	
Differential output voltage error	ΔV_{OD}				50	mV	
Offset voltage	V_{OS}	Measurement circuit 2, OE=Open, $R_L=100\Omega$ OUT/OUTN pins	1.125	1.25	1.375	V	
Offset voltage error	ΔV_{OS}				50	mV	
Output leakage current	I_Z	Measurement circuit 3, SW=High or Low OE=Low, OUT/OUTN pins			10	μA	
High-level input voltage	V_{IH}	Measurement circuit 1, OE pin	$0.7V_{CC}$			V	
Low-level input voltage	V_{IL}	Measurement circuit 1, OE pin			$0.3V_{CC}$	V	
High-level input current	I_{IH}^{*1}	Measurement circuit 1, $V_{IN}=0.7V_{CC}$, OE pin	-10		-70	μA	
Low-level input current	I_{IL}^{*1}	Measurement circuit 1, $V_{IN}=0V$, OE pin	-1		-15	μA	
Oscillation capacitors	C_{IN}	Design value (a monitor pattern on a wafer is tested), Excluding parasitic capacitance.	5087Ax	1.70	2.00	2.30	pF
			5087Bx	0.85	1.00	1.15	
	C_{OUT}		5087Ax	3.40	4.00	4.60	
			5087Bx	0.85	1.00	1.15	

*1. A sign means the direction of current flows and the MAX value is defined as the largest absolute value.

5087 series

2.5V operation

$V_{DD}=2.375$ to $2.625V$, $GND=0V$, $T_a=-40$ to $+85^\circ C$ unless otherwise noted.

Parameter	Symbol	Conditions	Rating			Unit	
			MIN	TYP	MAX		
Current consumption	I_{CC}	Measurement circuit 1, OE=Open		47	68	mA	
Standby current	I_{STB}	Measurement circuit 1, OE=Low			30	μA	
High-level output voltage	V_{OH}	Measurement circuit 2, OE=Open, $R_L=100\Omega$ OUT/OUTN pins		1.43	1.6	V	
Low-level output voltage	V_{OL}		0.9	1.1		V	
Differential output voltage	V_{OD}	Measurement circuit 2, OE=Open, $R_L=100\Omega$ OUT/OUTN pins	247	330	454	mV	
Differential output voltage error	ΔV_{OD}				50	mV	
Offset voltage	V_{OS}	Measurement circuit 2, OE=Open, $R_L=100\Omega$ OUT/OUTN pins	1.125	1.25	1.375	V	
Offset voltage error	ΔV_{OS}				50	mV	
Output leakage current	I_Z	Measurement circuit 3, SW=High or Low OE=Low, OUT/OUTN pins			10	μA	
High-level input voltage	V_{IH}	Measurement circuit 1, OE pin	$0.7V_{CC}$			V	
Low-level input voltage	V_{IL}	Measurement circuit 1, OE pin			$0.3V_{CC}$	V	
High-level input current	I_{IH}^{*1}	Measurement circuit 1, $V_{IN}=0.7V_{CC}$, OE pin	-10		-70	μA	
Low-level input current	I_{IL}^{*1}	Measurement circuit 1, $V_{IN}=0V$, OE pin	-1		-15	μA	
Oscillation capacitors	C_{IN}	Design value (a monitor pattern on a wafer is tested), Excluding parasitic capacitance.	5087Ax	1.70	2.00	2.30	pF
			5087Bx	0.85	1.00	1.15	
	5087Ax		3.40	4.00	4.60		
	5087Bx		0.85	1.00	1.15		

*1. A sign means the direction of current flows and the MAX value is defined as the largest absolute value.

5087 series

Switching Characteristics

3.3V operation

$V_{DD} = 3.0$ to $3.6V$, $GND = 0V$, $T_a = -40$ to $+85^\circ C$ unless otherwise noted

Parameter	Symbol	Conditions	Rating			Unit
			MIN	TYP	MAX	
Output duty cycle	Duty	Measurement circuit 4 $T_a = +25^\circ C$, $V_{CC} = 3.3V$ Measured at differential output is 0V (cross point)	45		55	%
Output swing	V_{OPP}	Measurement circuit 4, Peak to peak of differential output waveform	0.35			V
Output rise time	t_r	Measurement circuit 4 20% to 80% of differential output swing		290	400	ps
Output fall time	t_f	Measurement circuit 4 80% to 20% of differential output swing		290	400	ps
Output disable time	t_{OD}	Measurement circuit 5, $T_a = +25^\circ C$ Time to becoming output Hi-Z at $OE(fall) = V_{IL}$ (Refer to the timing chart for details.)			200	ns

Note. The ratings are measured by using the NPC standard resonator and jig. They may vary due to resonator characteristics, so they must be carefully evaluated.

Recommended resonator characteristics: A version: $R1 \leq 20\Omega$, $C0 \leq 3pF$

B version: $R1 \leq 20\Omega$, $C0 \leq 2pF$

2.5V operation

$V_{DD} = 2.375$ to $2.625V$, $GND = 0V$, $T_a = -40$ to $+85^\circ C$ unless otherwise noted

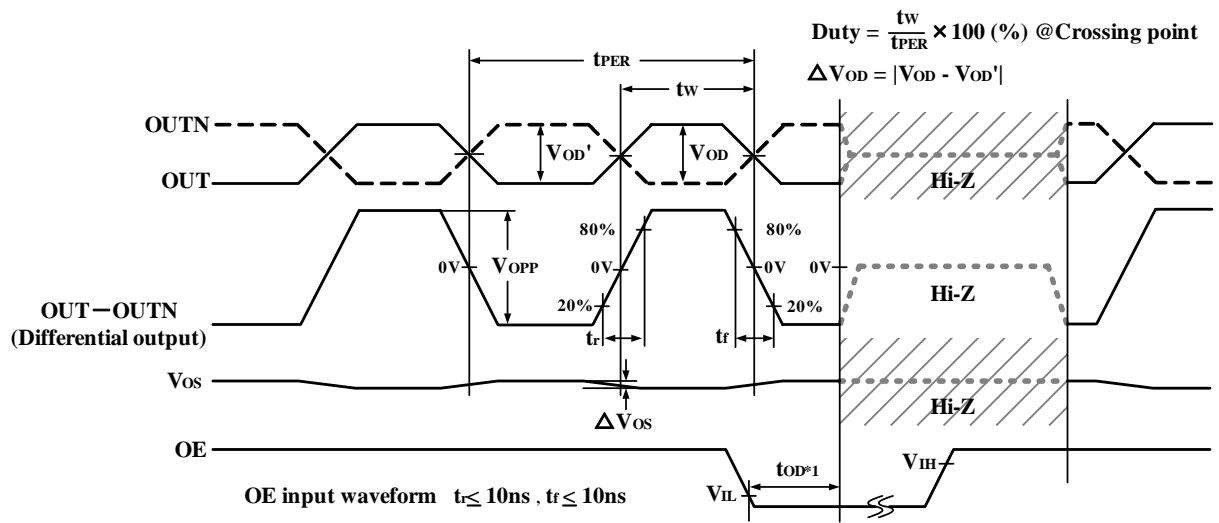

Parameter	Symbol	Conditions	Rating			Unit
			MIN	TYP	MAX	
Output duty cycle	Duty	Measurement circuit 4 $T_a = +25^\circ C$, $V_{CC} = 2.5V$ Measured at differential output is 0V (cross point)	45		55	%
Output swing	V_{OPP}	Measurement circuit 4, Peak to peak of differential output waveform	0.25			V
Output rise time	t_r	Measurement circuit 4 20% to 80% of differential output swing		290	400	ps
Output fall time	t_f	Measurement circuit 4 80% to 20% of differential output swing		290	400	ps
Output disable time	t_{OD}	Measurement circuit 5, $T_a = +25^\circ C$ Time to becoming output Hi-Z at $OE(fall) = V_{IL}$ (Refer to the timing chart for details.)			200	ns

Note. The ratings are measured by using the NPC standard resonator and jig. They may vary due to resonator characteristics, so they must be carefully evaluated.

Recommended resonator characteristics: A version: $R1 \leq 20\Omega$, $C0 \leq 3pF$

B version: $R1 \leq 20\Omega$, $C0 \leq 2pF$

Timing chart

*1. The OUT/OUTN output goes high impedance after the OE is fallen and then the output disable time “ t_{OD} ” has elapsed.

Figure 1. Timing chart

MEASUREMENT CIRCUITS

These are measurement circuits for electrical characteristics and switching characteristics.

- Note: Bypass capacitors specified in each measurement circuit below should be connected between VCC and GND. Load resistance specified in each measurement circuit below should be connected to OUT and OUTN pins (excluding measurement circuit 3). Circuit wiring of bypass capacitors and load resistance should be connected as short as possible. If the circuit wiring is long, the required characteristics may not be realized. Also, if the values of bypass capacitors and load resistance differ from the description in this document or are not connected, the required characteristics may not be realized.

* The capacitor and resistor used in measurement circuits below;

GRM155F11H103Z (MURATA)	0.01 μ F
GRM1552C1H102JA01 (MURATA)	1000pF
RN732ATTD49R9B25 (KOA)	49.9 Ω

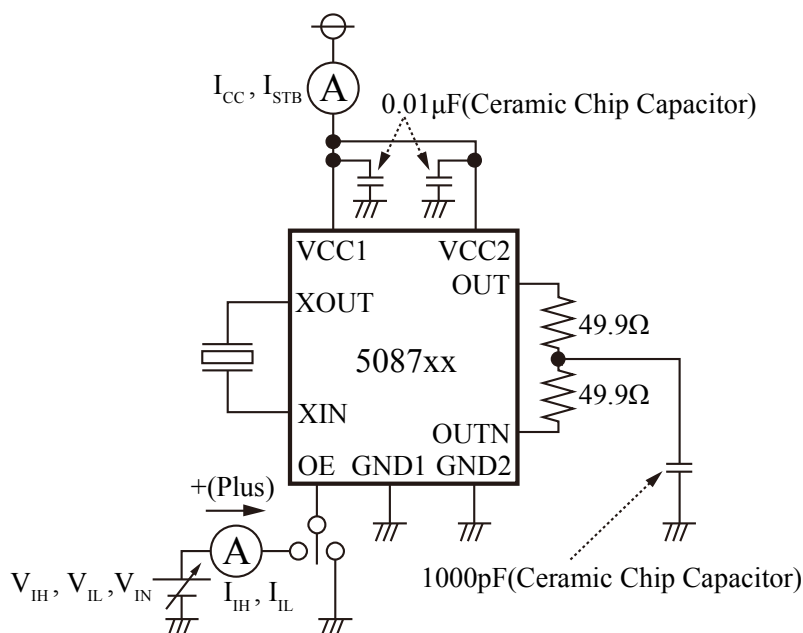

The differential probe spec used for measurement recommends >5GHz analog bandwidth, >50k Ω impedance, and <1pF load.

If common-mode noise becomes a problem, connect a capacitor between the center tap of 49.9 Ω resistance and GND.

The capacitor should choose value so that impedance becomes low on the frequency of the noise which is attenuated.

MEASUREMENT CIRCUIT 1

Measurement Parameter: I_{CC} , I_{STB} , V_{IH} , V_{IL} , I_{IH} , I_{IL}

MEASUREMENT CIRCUIT 2

Measurement Parameter: V_{OH} , V_{OL} , V_{OD} , ΔV_{OD} , V_{OS} , ΔV_{OS}

MEASUREMENT CIRCUIT 3

Measurement Parameter: I_z

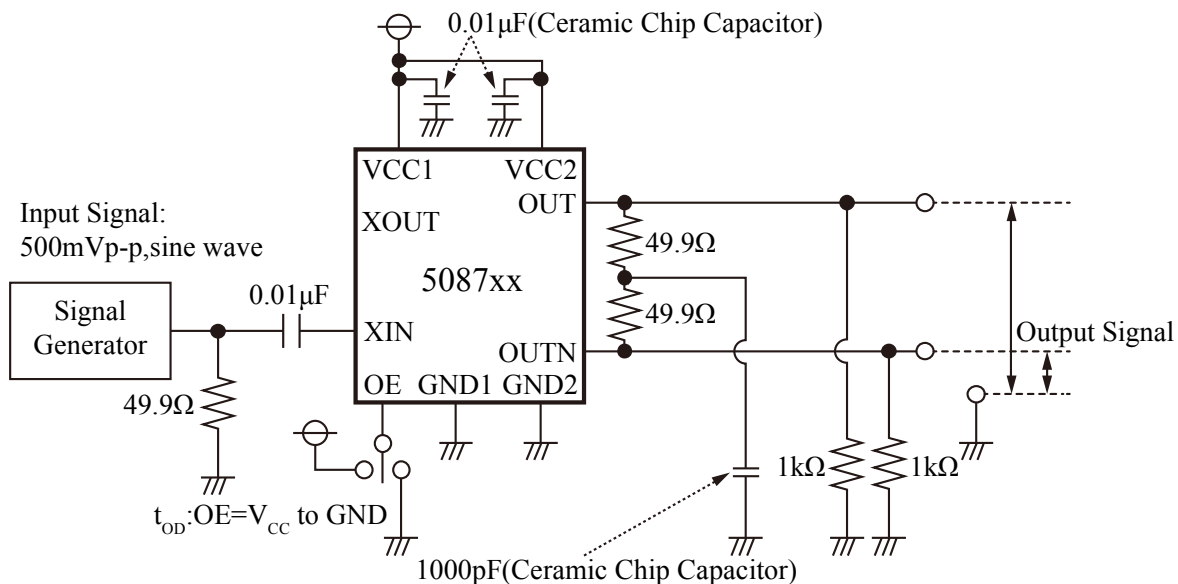

MEASUREMENT CIRCUIT 4

Measurement Parameter: Duty, V_{OPP} , t_r , t_f

MEASUREMENT CIRCUIT 5

Measurement Parameter: t_{OD}

FUNCTIONAL DESCRIPTION**Standby Function**

When OE goes LOW, the oscillator stops and the output pins (OUT, OUTN) become high impedance.

OE	OUT, OUTN	Oscillator
HIGH (Open)	Any $f_0, f_0/2, f_0/4$ output frequency	Operating
LOW	Hi-Z	Stopped

Power Saving Pull-up Resistor

The OE pin pull-up resistance changes in response to the input level (HIGH or LOW). When OE is tied LOW (standby state), the pull-up resistance becomes large, reducing the current consumed by the resistance. When OE is open circuit, the pull-up resistance becomes small, decreasing the susceptibility to the effects of external noise.

Oscillation Detection Function

The 5087 series also feature an oscillation detector circuit. This circuit functions to disable the outputs until the oscillator circuit starts and the oscillation becomes stable. This alleviates the danger of abnormal oscillator output at oscillator start-up when power is applied or when OE is switched.

TYPICAL PERFORMANCE

The following characteristics measured using the NPC's standard jig and SAW resonator. Note that the characteristics will vary with the resonator used or measurement condition.

SAW resonator used for measurement

Parameter	$f_0=315\text{MHz}$
C0 (pF)	2.8
R1 (Ω)	18

SAW resonator parameters

Current Consumption

Negative Resistance

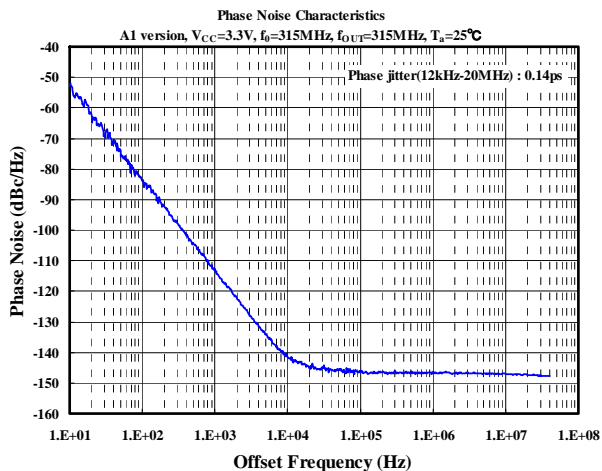

Measurement equipment: Agilent 4396B Network Analyzer, Agilent 85046A S-parameter Test Set

Characteristics are measured with a capacitance C0, representing the resonator equivalent circuit C0 capacitance, connected between the XIN and XOUT pins. Measurement are performed with Agilent 4396B, 85046A using the NPC test jig. Characteristics may vary with measurement jig and measurement conditions.

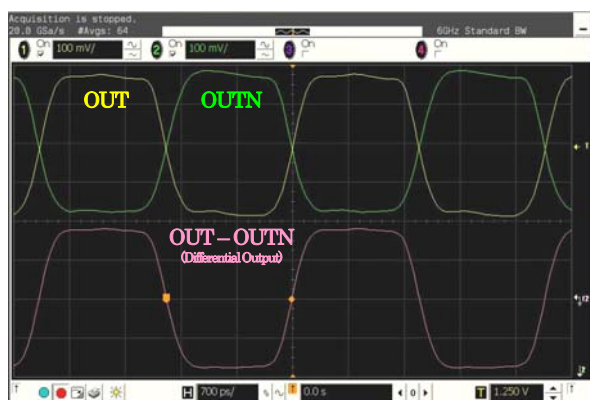

Phase Noise

Measurement equipment: Agilent E5052B Signal Source Analyzer

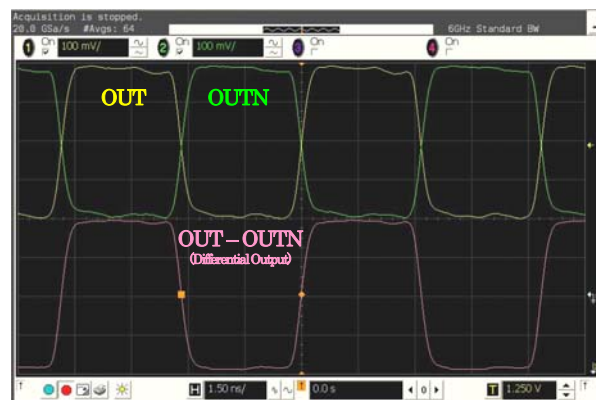

Output Waveform

Measurement equipment: Agilent DSO80604B Oscilloscope, Differential probe 1134A (Probe head E2678A)

A1 version, $V_{CC}=3.3V$, $T_a=25^\circ C$
 $f_0=315MHz$, $f_{OUT}=315MHz$

A2 version, $V_{CC}=3.3V$, $T_a=25^\circ C$
 $f_0=315MHz$, $f_{OUT}=157.5MHz$

Please pay your attention to the following points at time of using the products shown in this document.

1. The products shown in this document (hereinafter "Products") are designed and manufactured to the generally accepted standards of reliability as expected for use in general electronic and electrical equipment, such as personal equipment, machine tools and measurement equipment. The Products are not designed and manufactured to be used in any other special equipment requiring extremely high level of reliability and safety, such as aerospace equipment, nuclear power control equipment, medical equipment, transportation equipment, disaster prevention equipment, security equipment. The Products are not designed and manufactured to be used for the apparatus that exerts harmful influence on the human lives due to the defects, failure or malfunction of the Products. If you wish to use the Products in that apparatus, please contact our sales section in advance.
In the event that the Products are used in such apparatus without our prior approval, we assume no responsibility whatsoever for any damages resulting from the use of that apparatus.
2. NPC reserves the right to change the specifications of the Products in order to improve the characteristics or reliability thereof.
3. The information described in this document is presented only as a guide for using the Products. No responsibility is assumed by us for any infringements of patents or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any patents or other rights of the third parties. Then, we assume no responsibility whatsoever for any damages resulting from that infringements.
4. The constant of each circuit shown in this document is described as an example, and it is not guaranteed about its value of the mass production products.
5. In the case of that the Products in this document falls under the foreign exchange and foreign trade control law or other applicable laws and regulations, approval of the export to be based on those laws and regulations are necessary. Customers are requested appropriately take steps to obtain required permissions or approvals from appropriate government agencies.
