8. Typical Characteristic Curves -----	11 ~ 15
9. Reliability Test Items and Conditions -----	20
10. Packing and Labeling of Products -----	21 ~ 25
11. Cautions on Use -----	26 ~ 29
Appendix -----	30

1. Features

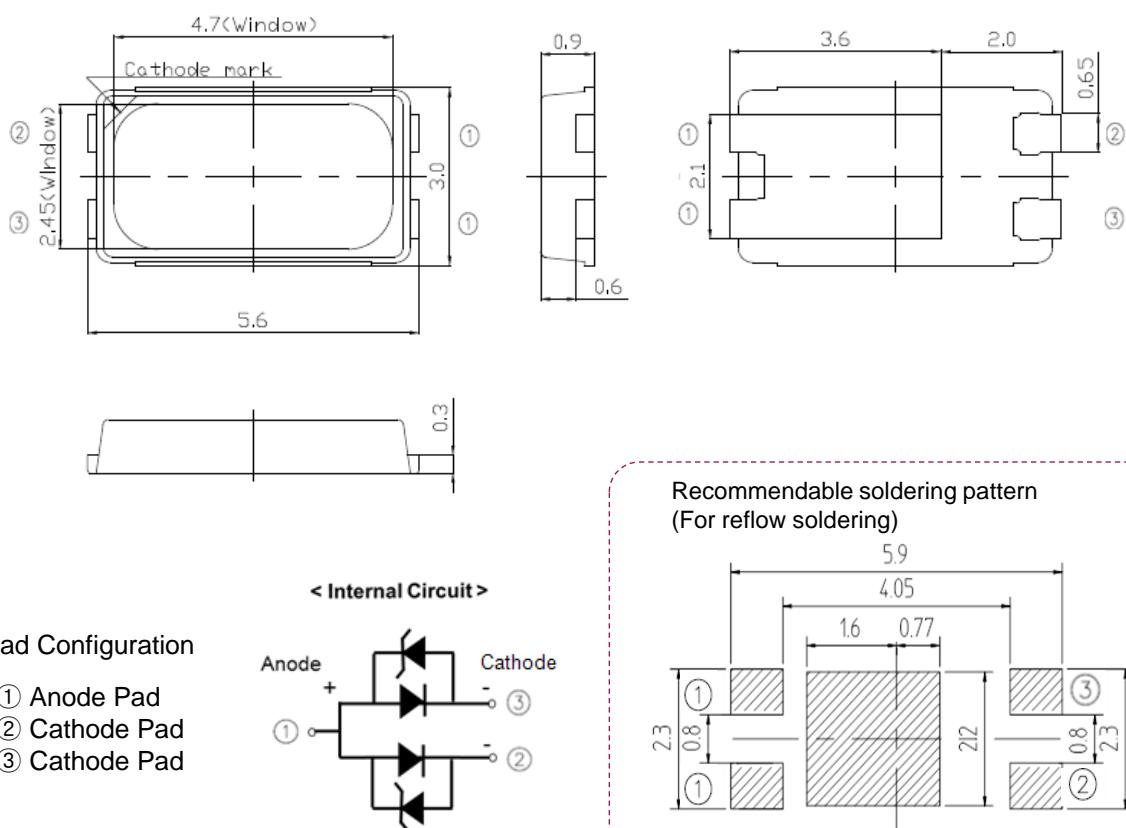

- Lighting Color : White
- Lead Frame Type LED Package : $5.6 \times 3.0 \times 0.9$ mm (L×W×H)
- Viewing Angle : 120°
- Chip Material : InGaN
- Soldering Method : Reflow Soldering
- Taping : 12 mm conductive black carrier tape & antistatic clear cover tape.
3,000pcs/reel, $\Phi 178$ mm wheel
- UL-recognized Component (E356829)
- RoHS Compliant

2. Applications

- Interior and Exterior Illumination

3. Outline Dimensions

(Unit : mm)

▪ Tolerance unless otherwise mentioned are ± 0.1 mm

4. Absolute Maximum Ratings

(Ta = 25°C)

Item	Symbol	Rating	Unit
Forward Current	If	160	mA
Peak Pulse Forward Current ^{*1)}	Ifp	300	mA
Operating Temperature	Topr	-30 ~ +85	°C
Storage Temperature	Tstg	-40 ~ +100	°C
Junction Temperature	Tj	110	°C
Soldering Temperature		JEDEC-J-STD-020D	
ESD Classification		Class 2 (JESD22-A114)	

*1) Pulse width ≤ 10ms and duty cycle ≤ 10%

- ※ Operating the LED beyond the listed maximum ratings may affect device reliability and cause permanent damage.
- These or any other conditions beyond those indicated under recommended operating conditions are not implied.
- The exposure to the absolute maximum rated conditions may affect device reliability.

※ The LEDs are not designed to be driven in reverse bias.

5. Electro - Optical Characteristics

(Ta = 25°C, If = 120mA)

7. Chromaticity Bins

LG Innotek complies with the ANSI C78.377A standard for its chromaticity bin structure. For each ANSI quadrangle for the CCT range of 4500K to 6500K, LG Innotek provides 9 micro bins.

11. Cautions on Use

11-1. Moisture-Proof Package

- The moisture in the SMD package may vaporize and expand during soldering.
- The moisture can damage the optical characteristics of the LEDs due to the encapsulation.

11-2. During Storage

Conditions		Temperature	Humidity	Time
Storage	Before Opening Aluminum Bag	5°C ~ 30°C	< 50% RH	Within 1 Year from the Delivery Date
	After Opening Aluminum Bag	5°C ~ 30°C	< 60% RH	≤ 672 Hours
	Baking	65 ± 5°C	< 10% RH	10 ~ 24 Hours

11-3. During Usage

- The LED should avoid the direct contact with hazardous materials such as sulfur, chlorine, phthalate, etc..
- The metal parts on the LED can rust when exposed to corrosive gases. Therefore, exposure to corrosive gases must be avoided during operation and storage.
- The silver-plated metal parts also can be affected not only by the corrosive gases emitted inside of the end-products but by the gases penetrated from outside environment.
- Extreme environments such as sudden ambient temperature changes or high humidity that can cause condensation must be avoided.

11-4. Cleaning

- Do not use brushes for cleaning or organic solvents (i.e. Acetone, TCE, etc..) for washing as they may damage the resin of the LEDs.
- IPA is the recommendable solvent for cleaning the LEDs under the following conditions.
Clearing Condition : IPA, 25°C max. × 60 sec max.
- Ultrasonic cleaning is not recommended.
- Pretests should be conducted with the actual cleaning process to validate that the process will not damage the LEDs.

11. Cautions on Use

11-5. Thermal Management

- The thermal design of the end product must be thoroughly considered, particularly at the beginning of the end product design process.
- The generation of heat is greatly impacted by the input power, the thermal resistance of the circuit boards and the density of the LED array combined with other components.

11-6. Static Electricity

- Wristbands and anti-electrostatic gloves are strongly recommended and all devices, equipment and machinery must be properly grounded when handling the LEDs, which are sensitive against static electricity and surge.
- Precautions are to be taken against surge voltage to the equipment that mounts the LEDs.
- Unusual characteristics such as significant increase of current leakage, decrease of turn-on voltage, or non-operation at a low current can occur when the LED is damaged.

11-7. Recommended Circuit

- The current through each LED must not exceed the absolute maximum rating when designing the circuits.
- In general, the LED forward voltages can vary. LEDs in parallel that have different forward voltages in combination with a single resistor can result in different forward currents to each LED, which can also output different luminous flux values. In the worst case, the currents can exceed the absolute maximum ratings which can stress the LEDs. Matrix circuit with a single resistor for each LED is recommended to avoid luminous flux fluctuations.

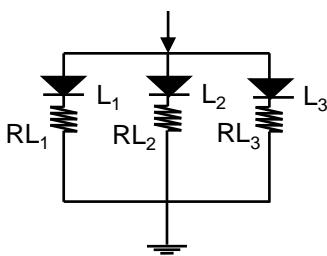

Fig.1 Recommended Circuit in Parallel Mode
: Separate resistors must be used for each LED.

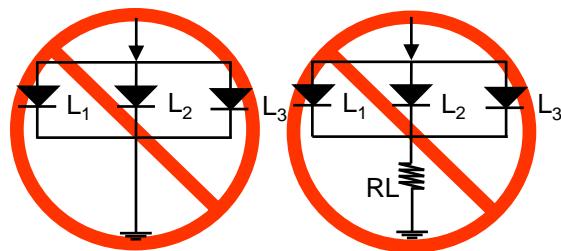

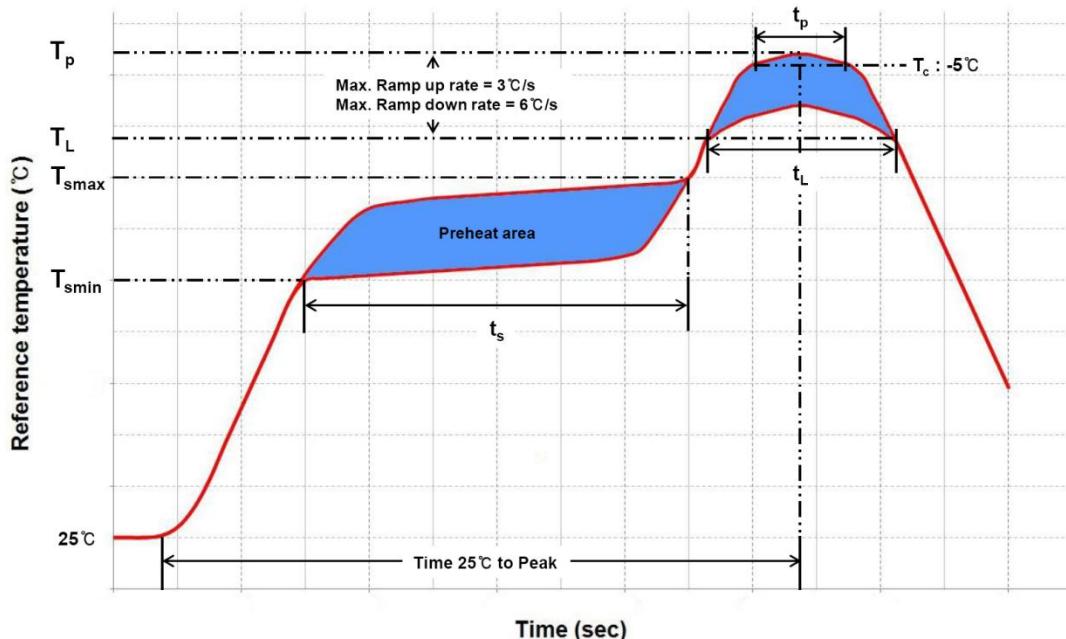

Fig.2. Abnormal Circuit
Circuits to Avoid: The current through the LEDs may vary due to the variation in LED forward voltage.

- The driving circuits must be designed to operate the LEDs by forward bias only.
- Reverse voltages can damage the zener diode, which can cause the LED to fail.
- A constant current LED driver is recommended to power the LEDs.

11. Cautions on Use

11-8. Soldering Conditions

- Reflow soldering is the recommended method for assembling LEDs on a circuit board.
- LG Innotek does not guarantee the performance of the LEDs assembled by the dip soldering method.
- Recommended Soldering Profile (according to JEDEC J-STD-020D)

Profile Feature	Pb-Free Assembly	Pb-Based Assembly
Preheat/Soak		
Temperature Min(T_{smin})	150°C	100°C
Temperature Max(T_{smax})	200°C	150°C
Maximum time(t_s) from T_{smin} to T_{smax}	60~120 seconds	60~120 seconds
Ramp-up rate (T_L to T_p)	3°C / second max.	3°C / second max.
Liquidous temperature (T_L)	217°C	183°C
Time (t_L) maintained above T_L	60~150 seconds	60~150 seconds
Maximum peak package body temperature (T_p)	260°C	235°C
Time(t_p) within 5°C of the specified temperature (T_c)	30 seconds	20 seconds
Ramp-down rate (T_p to T_L)	6°C/second max.	6°C/second max.
Maximum Time 25°C to peak temperature	8 minutes max.	6 minutes max.

- Reflow or hand soldering at the lowest possible temperature is desirable for the LEDs although the recommended soldering conditions are specified in the above diagrams.
- A rapid cooling process is not recommended for the LEDs from the peak temperature.
- The silicone encapsulant at the top of the LED package is a soft surface, which can easily be damaged by pressure. Precautions should be taken to avoid strong pressure on the silicone resin when leveraging the pick and place machines.
- Reflow soldering should not be done more than two times.

11. Cautions on Use

11-9. Soldering Iron

- The recommended condition is less than 5 seconds at 260 °C.
- The time must be shorter for the higher temperatures. (+10 °C → -1sec).
- The power dissipation of the soldering iron should be lower than 15W and the surface temperature of the device should be controlled at or under 230 °C.

11-10. Eye Safety Guidelines

- Do not directly look at the light when the LEDs are on.
- Proceed with caution to avoid the risk of damage to the eyes when examining the LEDs with optical instruments.

11-11. Manual Handling

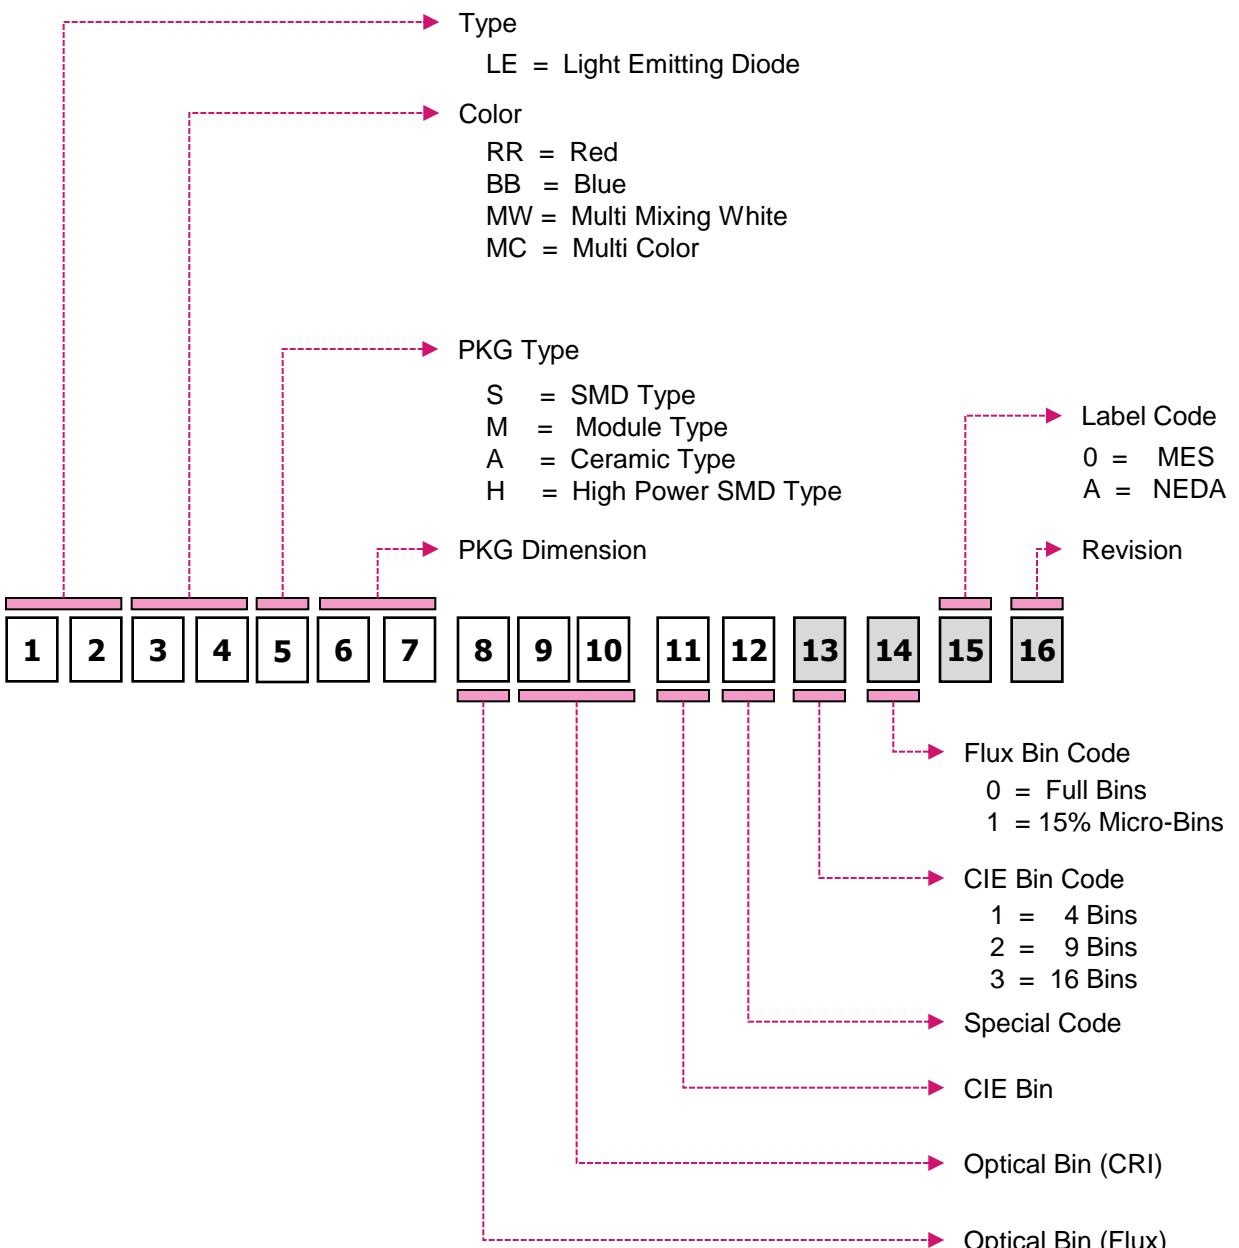

- Use Teflon-type tweezers to grab base of LED and do not apply mechanical pressure on the surface of the encapsulant.

Appendix. Nomenclature of Package

All LEDs are tested and sorted by color, luminous flux and forward voltage where every LED in a tube has only a single color bin, luminous flux bin and forward voltage bin. However, the forward voltage bin information is not captured in the part number nomenclature.

A 16-digit part number is required when orders are placed. LG Innotek leverages the following part number nomenclature.
