Features:

- Non-contact switching
- 0.130" wide slot
- 0.300" lead spacing

Applications:

- Position sensing
- Open sensing
- Rotation sensing

DESCRIPTION

The **67060** consists of GaAlAs light emitting diode and an NPN silicon phototransistor in hermetic coaxial packages, mounted in a plastic housing on opposite sides of a 0.125" wide slot. Phototransistor switching takes place whenever an opaque object passes through the slot. The components are available screened in accordance with MIL-PRF-19500. Available with single or dual mounting flange(s).
