

Features

- ◆ High-speed access
 - Commercial: 20/35/55ns (max.)
 - Industrial: 25/55ns (max.)
- ◆ Low-power operation
 - IDT71321/IDT71421SA
Active: 325mW (typ.)
Standby: 5mW (typ.)
 - IDT71321/421LA
Active: 325mW (typ.)
Standby: 1mW (typ.)
- ◆ Two $\overline{\text{INT}}$ flags for port-to-port communications
- ◆ MASTER IDT71321 easily expands data bus width to 16-or-more-bits using SLAVE IDT71421
- ◆ On-chip port arbitration logic (IDT71321 only)
- ◆ $\overline{\text{BUSY}}$ output flag on IDT71321; $\overline{\text{BUSY}}$ input on IDT71421
- ◆ Fully asynchronous operation from either port
- ◆ Battery backup operation – 2V data retention (LA only)
- ◆ TTL-compatible, single 5V $\pm 10\%$ power supply
- ◆ Available in 52-Pin PLCC, 52-Pin STQFP, 64-Pin TQFP, and 64-Pin STQFP
- ◆ Industrial temperature range (-40°C to $+85^{\circ}\text{C}$) is available for selected speeds
- ◆ Green parts available, see ordering information

Functional Block Diagram

NOTES:

1. IDT71321 (MASTER): $\overline{\text{BUSY}}$ is open drain output and requires pullup resistor of 270 Ω .
IDT71421 (SLAVE): $\overline{\text{BUSY}}$ is input.
2. Open drain output: requires pullup resistor of 270 Ω .

Description

The IDT71321/IDT71421 are high-speed 2K x 8 Dual-Port Static RAMs with internal interrupt logic for interprocessor communications. The IDT71321 is designed to be used as a stand-alone 8-bit Dual-Port Static RAM or as a "MASTER" Dual-Port Static RAM together with the IDT71421 "SLAVE" Dual-Port in 16-bit-or-more word width systems. Using the IDT MASTER/SLAVE Dual-Port Static RAM approach in 16-or-more-bit memory system applications results in full speed, error-free operation without the need for additional discrete logic.

Both devices provide two independent ports with separate control,

address, and I/O pins that permit independent, asynchronous access for reads or writes to any location in memory. An automatic power down feature, controlled by \overline{CE} , permits the on chip circuitry of each port to enter a very low standby power mode.

Fabricated using CMOS high-performance technology, these devices typically operate on only 325mW of power. Low-power (LA) versions offer battery backup data retention capability, with each Dual-Port typically consuming 200 μ W from a 2V battery.

The IDT71321/IDT71421 devices are packaged in 52-pin PLCC, 52-pin STQFP, 64-pin TQFP, and 64-pin STQFP.

Pin Configurations^(1,2,3)

NOTES:

1. All Vcc pins must be connected to power supply.
2. All GND pins must be connected to ground supply.
3. PLG52 package body is approximately .75 in x .75 in x .17 in.
PNG64 package body is approximately 14mm x 14mm x 1.4mm.
PPG64 package body is approximately 10mm x 10mm x 1.4mm.
4. This package code is used to reference the package diagram.

Pin Configurations (continued)^(1,2,3)

NOTES:

1. All Vcc pins must be connected to power supply.
2. All GND pins must be connected to ground supply.
3. PPG52 package body is approximately 10mm x 10mm x 1.4mm.
4. This package code is used to reference the package diagram.

Capacitance⁽¹⁾
(TA = +25°C, f = 1.0MHz) TQFP Only

Symbol	Parameter	Conditions ⁽²⁾	Max.	Unit
CIN	Input Capacitance	VIN = 3dV	9	pF
COU	Output Capacitance	VOUT = 3dV	10	pF

NOTES:

1. This parameter is determined by device characterization but is not production tested.
2. 3dV references the interpolated capacitance when the input and output signals switch from 0V to 3V or from 3V to 0V.

Absolute Maximum Ratings⁽¹⁾

Symbol	Rating	Commercial & Industrial	Unit
VTERM ⁽²⁾	Terminal Voltage with Respect to GND	-0.5 to +7.0	V
TBIAS	Temperature Under Bias	-55 to +125	°C
TSTG	Storage Temperature	-65 to +150	°C
IOUT	DC Output Current	50	mA

NOTES:

1. Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of the specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
2. VTERM must not exceed Vcc + 10% for more than 25% of the cycle time or 10ns maximum, and is limited to ≤ 20mA for the period of VTERM ≥ Vcc + 10%.

Recommended Operating Temperature and Supply Voltage^(1,2)

Grade	Ambient Temperature	GND	Vcc
Commercial	0°C to +70°C	0V	5.0V ± 10%
Industrial	-40°C to +85°C	0V	5.0V ± 10%

NOTES:

1. This is the parameter TA. This is the "instant on" case temperature.
2. Industrial temperature: for specific speeds, packages and powers contact your sales office.

Recommended DC Operating Conditions

Symbol	Parameter	Min.	Typ.	Max.	Unit
VCC	Supply Voltage	4.5	5.0	5.5	V
GND	Ground	0	0	0	V
VIH	Input High Voltage	2.2	—	6.0 ⁽²⁾	V
VIL	Input Low Voltage	-0.5 ⁽¹⁾	—	0.8	V

NOTES:

1. VIL (min.) = -1.5V for pulse width less than 10ns.
2. VTERM must not exceed Vcc + 10%.

2691 tbl 04b

NOTES:

- 'X' in part numbers indicates power rating (SA or LA).
- At $f = f_{MAX}$, address and control lines (except Output Enable) are cycling at the maximum frequency read cycle of 1/trc, and using "AC TEST CONDITIONS" of input levels of GND to 3V.
- $f = 0$ means no address or control lines change. Applies only to inputs at CMOS level standby.
- V_{CC} = 5V, T_A = +25°C for Typ and is not production tested. V_{CC DC} = 100mA (Typ)
- Port "A" may be either left or right port. Port "B" is opposite from port "A".

DC Electrical Characteristics Over the Operating Temperature and Supply Voltage Range ($V_{CC} = 5.0V \pm 10\%$)

2691 tbl 08b

NOTES:

1. Transition is measured 0mV from Low or High-impedance voltage Output Test Load (Figure 2).
2. 'X' in part numbers indicates power rating (SA or LA).
3. This parameter is guaranteed by device characterization, but is not production tested.

Timing Waveform of Read Cycle No. 1, Either Side⁽¹⁾

NOTES:

1. $R/\bar{W} = V_{IH}$, $\bar{CE} = V_{IL}$, and is $\bar{OE} = V_{IL}$. Address is valid prior to the coincidental with \bar{CE} transition LOW.
2. t_{BDD} delay is required only in the case where the opposite port is completing a write operation to the same address location. For simultaneous read operations $BUSY$ has no relationship to valid output data.
3. Start of valid data depends on which timing becomes effective last t_{AOE} , t_{ACE} , t_{AA} , and t_{BDD} .

Timing Waveform of Read Cycle No. 2, Either Side⁽³⁾

NOTES:

1. Timing depends on which signal is asserted last, \bar{OE} or \bar{CE} .
2. Timing depends on which signal is de-asserted first, \bar{OE} or \bar{CE} .
3. $R/\bar{W} = V_{IH}$ and $\bar{OE} = V_{IL}$, and the address is valid prior to or coincidental with \bar{CE} transition LOW.
4. Start of valid data depends on which timing becomes effective last t_{AOE} , t_{ACE} , t_{AA} , and t_{BDD} .

t _{wz}	Write Enable to Output in High-Z ⁽¹⁾	—	15	—	30	ns
t _{ow}	Output Active from End-of-Write ⁽¹⁾	0	—	0	—	ns

2691 tbl 09b

NOTES:

- Transition is measured 0mV from Low or High-impedance voltage with Output Test Load (Figure 2). This parameter is guaranteed by device characterization but is not production tested.
- For Master/Slave combination, t_{wc} = t_{BAA} + t_{wp}, since R_W = V_{IL} must occur after t_{BAA}.
- If \overline{OE} is LOW during a R_W controlled write cycle, the write pulse width must be the larger of t_{wp} or (t_{wz} + t_{dw}) to allow the I/O drivers to turn off data to be placed on the bus for the required t_{dw}. If \overline{OE} is HIGH during a R_W controlled write cycle, this requirement does not apply and the write pulse can be as short as the specified t_{wp}.
- 'X' in part numbers indicates power rating (SA or LA).

Timing Waveform of Write Cycle No. 1, (R/\overline{W} Controlled Timing)^(1,5,8)

Timing Waveform of Write Cycle No. 2, (\overline{CE} Controlled Timing)^(1,5)

NOTES:

1. R/\overline{W} or \overline{CE} must be HIGH during all address transitions.
2. A write occurs during the overlap (t_{EW} or t_{WP}) of $\overline{CE} = V_{IL}$ and $R/\overline{W} = V_{IL}$.
3. t_{WR} is measured from the earlier of \overline{CE} or R/\overline{W} going HIGH to the end of the write cycle.
4. During this period, the I/O pins are in the output state and input signals must not be applied.
5. If the \overline{CE} LOW transition occurs simultaneously with or after the R/\overline{W} LOW transition, the outputs remain in the High-impedance state.
6. Timing depends on which enable signal (\overline{CE} or R/\overline{W}) is asserted last.
7. This parameter is determined to be device characterization, but is not production tested. Transition is measured 0mV from steady state with the Output Test Load (Figure 2).
8. If \overline{OE} is LOW during a R/\overline{W} controlled write cycle, the write pulse width must be the larger of t_{WP} or $(t_{WZ} + t_{OW})$ to allow the I/O drivers to turn off data to be placed on the bus for the required t_{OW} . If \overline{OE} is HIGH during a R/\overline{W} controlled write cycle, this requirement does not apply and the write pulse can be as short as the specified t_{WP} .

2691 tbl 10b

NOTES:

1. Port-to-port delay through RAM cells from the writing port to the reading port, refer to "Timing Waveform of Write with Port-to-Port Read and BUSY."
2. To ensure that the earlier of the two ports wins.
3. tbDD is a calculated parameter and is the greater of 0, tWDD - tWP (actual) or tDDD - tDW (actual).
4. To ensure that a write cycle is inhibited on port "B" during contention on port "A".
5. To ensure that a write cycle is completed on port "B" after contention on port "A".
6. 'X' in part numbers indicates power rating (SA or LA)..

Timing Waveform of Write with Port-to-Port Read and **BUSY**^(2,3,4)

NOTES:

- 1. To ensure that the earlier of the two ports wins. tAPS is ignored for Slave (IDT71421).
- 2. $\overline{CE}_L = \overline{CE}_R = V_{IL}$
- 3. $\overline{OE} = V_{IL}$ for the reading port.
- 4. All timing is the same for the left and right ports. Port "A" may be either the left or right port. Port "B" is opposite from port "A".

2691 drw 10

Timing Waveform of Write with **BUSY**⁽⁴⁾

NOTES:

- 1. t_{WH} must be met for both \overline{BUSY} input (IDT71421, slave) or output (IDT71321, Master).
- 2. \overline{BUSY} is asserted on port "B" blocking $R\overline{W}^B$, until \overline{BUSY}^B goes HIGH.
- 3. t_{WB} is only for the slave version (IDT71421).
- 4. All timing is the same for the left and right ports. Port "A" may be either the left or right port. Port "B" is opposite from port "A".

2691 drw 11

Timing Waveform of **BUSY** Arbitration Controlled by **CE** Timing⁽¹⁾

Timing Waveform of **BUSY** Arbitration Controlled by Address Match Timing⁽¹⁾

NOTES:

1. All timing is the same for left and right ports. Port "A" may be either left or right port. Port "B" is the opposite from port "A".
2. If tAPS is not satisfied, the **BUSY** will be asserted on one side or the other, but there is no guarantee on which side **BUSY** will be asserted (IDT71321 only).

Timing Waveform of Interrupt Mode⁽¹⁾

Set \overline{INT}

2691 drw 14

Clear \overline{INT}

2691 drw 15

NOTES:

1. All timing is the same for left and right ports. Port "A" may be either left or right port. Port "B" is the opposite from port "A".
2. See Interrupt Truth Table.
3. Timing depends on which enable signal (\overline{CE} or R/\overline{W}) is asserted last.
4. Timing depends on which enable signal (\overline{CE} or R/\overline{W}) is de-asserted first.

Truth Tables

Truth Table I. Non-Contention Read/Write Control⁽⁴⁾

Left or Right Port ⁽¹⁾				Function
R/W	CE	OE	D0-7	
X	H	X	Z	Port Disabled and in Power-Down Mode, ISB2 or ISB4
X	H	X	Z	CE _R = CE _L = V _{IH} , Power-Down Mode, ISB1 or ISB3
L	L	X	DATA _{IN}	Data on Port Written Into Memory ⁽²⁾
H	L	L	DATA _{OUT}	Data in Memory Output on Port ⁽³⁾
H	L	H	Z	High Impedance Outputs

2691 tbl 12

NOTES:

1. A_{0L} - A_{10L} ≠ A_{0R} - A_{10R}.
2. If BUSY = L, data is not written.
3. If BUSY = L, data may not be valid, see twDD and tDD timing.
4. 'H' = V_{IH}, 'L' = V_{IL}, 'X' = DON'T CARE, 'Z' = HIGH IMPEDANCE

Truth Table II. Interrupt Flag^(1,4)

Left Port					Right Port					Function
R/WL	CEL	OEL	A10L-A0L	INTL	RWR	CEr	OEr	A10R-A0R	INTR	
L	L	X	7FF	X	X	X	X	X	L ⁽²⁾	Set Right INTR Flag
X	X	X	X	X	X	L	L	7FF	H ⁽³⁾	Reset Right INTR Flag
X	X	X	X	L ⁽³⁾	L	L	X	7FE	X	Set Left INTL Flag
X	L	L	7FE	H ⁽²⁾	X	X	X	X	X	Reset Left INTL Flag

2691 tbl 13

NOTES:

1. Assumes BUSYL = BUSYR = V_{IH}
2. If BUSYL = V_{IL}, then No Change.
3. If BUSYR = V_{IL}, then No Change.
4. 'H' = HIGH, 'L' = LOW, 'X' = DON'T CARE

Truth Table III — Address **BUSY** Arbitration

Inputs			Outputs		Function
CEL	CEr	A0L-A10L A0R-A10R	BUSYL ⁽¹⁾	BUSYR ⁽¹⁾	
X	X	NO MATCH	H	H	Normal
H	X	MATCH	H	H	Normal
X	H	MATCH	H	H	Normal
L	L	MATCH	(2)	(2)	Write Inhibit ⁽³⁾

2691 tbl 14

NOTES:

1. Pins BUSYL and BUSYR are both outputs for IDT71321 (Master). Both are inputs for IDT71421 (Slave). BUSYx outputs on the IDT71321 are open drain, not push-pull outputs. On slaves the BUSYx input internally inhibits writes.
2. 'L' if the inputs to the opposite port were stable prior to the address and enable inputs of this port. 'H' if the inputs to the opposite port became stable after the address and enable inputs of this port. If tAPS is not met, either BUSYL or BUSYR = LOW will result. BUSYL and BUSYR outputs can not be LOW simultaneously.
3. Writes to the left port are internally ignored when BUSYL outputs are driving LOW regardless of actual logic level on the pin. Writes to the right port are internally ignored when BUSYR outputs are driving LOW regardless of actual logic level on the pin.

Functional Description

The IDT71321/IDT71421 provides two ports with separate control, address and I/O pins that permit independent access for reads or writes to any location in memory. The IDT71321/IDT71421 has an automatic power down feature controlled by \overline{CE} . The \overline{CE} controls on-chip power down circuitry that permits the respective port to go into a standby mode when not selected ($\overline{CE} = V_{IH}$). When a port is enabled, access to the entire memory array is permitted.

Interrupts

If the user chooses the interrupt function, a memory location (mail box or message center) is assigned to each port. The left port interrupt flag (\overline{INTL}) is asserted when the right port writes to memory location 7FE (HEX), where a write is defined as the $\overline{CE}_R = R/\overline{W}_R = V_{IL}$, per Truth Table II. The left port clears the interrupt by accessing address location 7FE when $\overline{CE}_L = \overline{OE}_L = V_{IL}$, R/W is a "don't care". Likewise, the right port interrupt flag (\overline{INTR}) is asserted when the left port writes to memory location 7FF (HEX) and to clear the interrupt flag (\overline{INTR}), the right port must access the memory location 7FF. The message (8 bits) at 7FE or 7FF is user-defined, since it is an addressable SRAM location. If the interrupt function is not used, address locations 7FE and 7FF are not used as mail boxes, but as part of the random access memory. Refer to Truth Table II for the interrupt operation.

Busy Logic

Busy Logic provides a hardware indication that both ports of the RAM have accessed the same location at the same time. It also allows one of the two accesses to proceed and signals the other side that the RAM is "Busy". The \overline{BUSY} pin can then be used to stall the access until the operation on the other side is completed. If a write operation has been attempted from the side that receives a busy indication, the write signal is gated internally to prevent the write from proceeding.

The use of \overline{BUSY} Logic is not required or desirable for all applications. In some cases it may be useful to logically OR the \overline{BUSY} outputs together and use any \overline{BUSY} indication as an interrupt source to flag the event of an illegal or illogical operation. In slave mode the \overline{BUSY} pin operates solely as a write inhibit input pin. Normal operation can be programmed by tying the \overline{BUSY} pins HIGH. If desired, unintended write operations can be prevented to a port by tying the \overline{BUSY} pin for that port LOW.

The \overline{BUSY} outputs on the IDT71321 (Master) are open drain type outputs and require open drain resistors to operate. If these SRAMs are

being expanded in depth, then the \overline{BUSY} indication for the resulting array does not require the use of an external AND gate.

Width Expansion with Busy Logic Master/Slave Arrays

When expanding an SRAM array in width while using \overline{BUSY} logic, one master part is used to decide which side of the SRAM array will receive a \overline{BUSY} indication, and to output that indication. Any number of slaves to be addressed in the same address range as the master, use the \overline{BUSY} signal as a write inhibit signal. Thus on the IDT71321/IDT71421 SRAMs the \overline{BUSY} pin is an output if the part is Master (IDT71321), and the \overline{BUSY} pin is an input if the part is a Slave (IDT71421) as shown in Figure 3.

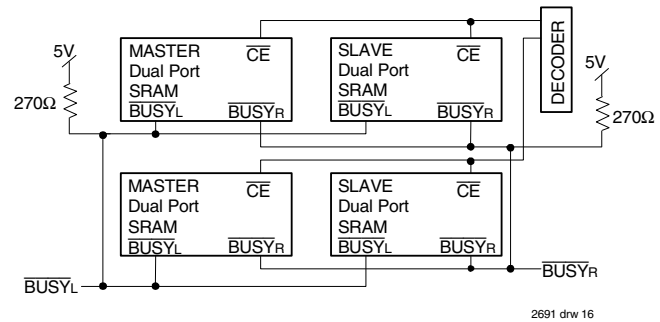

Figure 3. Busy and chip enable routing for both width and depth expansion with IDT71321 (Master) and (Slave) IDT71421 SRAMs.

If two or more master parts were used when expanding in width, a split decision could result with one master indicating \overline{BUSY} on one side of the array and another master indicating \overline{BUSY} on one other side of the array. This would inhibit the write operations from one port for part of a word and inhibit the write operations from the other port for the other part of the word.

The \overline{BUSY} arbitration, on a Master, is based on the chip enable and address signals only. It ignores whether an access is a read or write. In a master/slave array, both address and chip enable must be valid long enough for a \overline{BUSY} flag to be output from the master before the actual write pulse can be initiated with either the R/\overline{W} signal or the byte enables. Failure to observe this timing can result in a glitched internal write inhibit signal and corrupted data in the slave.

Datasheet Document History

03/24/99:		Initiated datasheet document history Converted to new format Cosmetic typographical corrections
	Pages 2 & 3	Added additional notes to pin configurations
06/07/99:		Changed drawing format
11/10/99:		Replaced IDT logo
08/23/01:	Page 3	Increased storage temperature parameters Clarified TA parameter
	Page 4	DC Electrical parameters—changed wording from "open" to "disabled"
	Page 16	Fixed part numbers in "Width Expansion" paragraph Changed $\pm 500\text{mV}$ to 0mV in notes
	Page 4	Industrial temperature range offering added to DC Electrical Characteristics for 25ns and removed for 35ns
	Page 7 & 9	Industrial temperature range added to AC Electrical Characteristics for 25ns
	Page 17	Industrial offering removed for 35ns ordering information
01/17/06:	Page 1	Added green availability to features
	Page 17	Added green indicator to ordering information
	Page 1 & 17	Replaced old IDT™ with new IDT™ logo
08/25/06:	Page 14	Changed $\overline{\text{INT}}\text{"A"}$ to $\overline{\text{INT}}\text{"B"}$ in the CLEAR $\overline{\text{INT}}$ drawing in the Timing Waveform of Interrupt Mode
10/29/08:	Page 17	Removed "IDT" from orderable part number
09/10/12:	Page 1 & 2	52-pin STQFP added to the features and description
	Page 3	PP52-1 pin configuration added
	Page 9	Typo corrected
	Page 17	Added T&R indicator and PP52-1 package information to the ordering information
06/10/16:	Page 2	Changed diagram for the J52 pin configuration by rotating package pin labels and pin numbers 90 degrees clockwise to reflect pin1 orientation and added pin 1 dot at pin 1 Removed J52 chamfers and aligned the top and bottom pin labels in the standard direction Changed diagram for the PN64/PP64 pin configuration by rotating package pin labels and pin numbers 90 degrees counter clockwise to reflect pin 1 orientation and added pin 1 dot at pin 1 PP52 pin configuration. Added the IDT logo, changed the text to be in alignment with new diagram marking specs
	Page 3	Removed footnote 5 and its references
	Pages 2 & 17	In pin configuration footnotes and in the Ordering Information: The package codes J52-1, PN64-1, PP64-1 and PP52-1 changed to J52, PN64, PP64 & PP52 respectively to match standard package codes
02/20/18:		Product Discontinuation Notice - PDN# SP-17-02 Last time buy expires June 15, 2018
09/24/19:	Pages 1 & 17	Deleted obsolete Commercial 25ns speed grade
	Pages 2 & 3	Updated package codes
	Page 3	Rotated PPG52 STQFP pin configuration to accurately reflect pin 1 orientation
	Page 5	Typo corrected in the Data Retention Characteristics table 06
	Page 17	Added Orderable Part Information

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
