74ALVC162334A

16-bit registered driver with inverted register enable and 30 Ω termination resistors (3-state)

Rev. 03 — 13 December 2006

Product data sheet

1. General description

The 74ALVC162334A is a 16-bit universal bus driver. Data flow is controlled by active LOW output enable (\overline{OE}) , active LOW latch enable (\overline{LE}) , and clock input (CP).

When \overline{LE} is LOW, the A to Y data flow is transparent. When \overline{LE} is HIGH and CP is held at LOW or HIGH, the data is latched; on the LOW to HIGH transient of CP, the A data is stored in the latch/flip-flop.

The 74ALVC162334A is designed with 30 Ω series resistors in both HIGH or LOW output stages.

When \overline{OE} is LOW, the outputs are active. When \overline{OE} is HIGH, the outputs go to the high-impedance OFF-state. Operation of the \overline{OE} input does not affect the state of the latch/flip-flop.

To ensure the high-impedance state during power-up or power-down, \overline{OE} should be tied to V_{CC} through a pull-up resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

2. Features

- Wide supply voltage range of 1.2 V to 3.6 V
- Complies with JEDEC standard 8-1A
- CMOS low power consumption
- Direct interface with TTL levels
- Current drive: ±24 mA at 3.0 V
- MULTIBYTE flow-through standard pinout architecture
- Low inductance multiple V_{CC} and GND pins for minimum noise and ground bounce
- Output drive capability 50 Ω transmission lines at 85 °C
- Integrated 30 Ω termination resistors
- Input diodes to accommodate strong drivers

3. Quick reference data

Table 1. Quick reference data

 $V_{CC} = 3.3 \text{ V} \pm 0.3 \text{ V}$; GND = 0 V; $t_r = t_f \le 2.5 \text{ ns}$; $C_L = 50 \text{ pF}$ (see Figure 11).

Symbol	Parameter	Conditions	Min	Typ[1]	Max	Unit
t _{PHL}	HIGH-to-LOW propagation delay	An to Yn; Figure 5	1.0	2.8	4.3	ns
		LE to Yn; Figure 6	1.3	2.8	4.4	ns
		CP to Yn; Figure 8	1.4	3.2	4.9	ns
t _{PLH}	LOW-to-HIGH propagation delay	An to Yn; Figure 5	1.0	2.8	4.3	ns
		LE to Yn; Figure 6	1.3	2.8	4.4	ns
		CP to Yn; Figure 8	1.4	3.2	4.9	ns
f _{max}	maximum input clock frequency	Figure 8	150	240	-	MHz
Ci	input capacitance		-	4.0	-	pF
C _{io}	input/output capacitance		-	8.0	-	pF
C_{PD}	power dissipation capacitance	per buffer; $V_I = GND$ to V_{CC}	[2]			
		transparent mode; output enabled	-	10	-	pF
		transparent mode; output disabled	-	3	-	pF
		clocked mode; output enabled	-	21	-	pF
		clocked mode; output disabled	-	15	-	pF

^[1] All typical values are at T_{amb} = 25 °C.

[2] C_{PD} is used to determine the dynamic power dissipation (P_D) in μ W.

 $P_D = C_{PD} \times V_{CC}^2 \times f_i + \Sigma \ (C_L \times V_{CC}^2 \times f_o), \ where:$

 f_i = input frequency in MHz;

C_L = output load capacitance in pF;

 f_o = output frequency in MHz;

 V_{CC} = supply voltage in V;

 $\Sigma (C_L \times V_{CC}^2 \times f_0) = \text{sum of outputs.}$

11.1 AC waveforms

 V_{CC} = 3.0 V to 3.6 V and V_{CC} = 2.7 V range:

$$V_M = 1.5 \text{ V}$$
; $V_X = V_{OL} + 0.3 \text{ V}$; $V_Y = V_{OH} - 0.3 \text{ V}$; $V_I = 2.7 \text{ V}$.

V_{OL} and V_{OH} are the typical output voltage drop that occur with the output load.

 V_{CC} = 2.3 V to 2.7 V and V_{CC} < 2.3 V range:

$$V_{M} = 0.5 \text{ V}; V_{X} = V_{OL} + 0.15 \text{ V}; V_{Y} = V_{OH} - 0.15 \text{ V}; V_{I} = V_{CC}.$$

V_{OL} and V_{OH} are the typical output voltage drop that occur with the output load.

14. Soldering

This text provides a very brief insight into a complex technology. A more in-depth account of soldering ICs can be found in Application Note *AN10365 "Surface mount reflow soldering description"*.

14.1 Introduction to soldering

Soldering is one of the most common methods through which packages are attached to Printed Circuit Boards (PCBs), to form electrical circuits. The soldered joint provides both the mechanical and the electrical connection. There is no single soldering method that is ideal for all IC packages. Wave soldering is often preferred when through-hole and Surface Mount Devices (SMDs) are mixed on one printed wiring board; however, it is not suitable for fine pitch SMDs. Reflow soldering is ideal for the small pitches and high densities that come with increased miniaturization.

14.2 Wave and reflow soldering

Wave soldering is a joining technology in which the joints are made by solder coming from a standing wave of liquid solder. The wave soldering process is suitable for the following:

- Through-hole components
- Leaded or leadless SMDs, which are glued to the surface of the printed circuit board

Not all SMDs can be wave soldered. Packages with solder balls, and some leadless packages which have solder lands underneath the body, cannot be wave soldered. Also, leaded SMDs with leads having a pitch smaller than ~0.6 mm cannot be wave soldered, due to an increased probability of bridging.

The reflow soldering process involves applying solder paste to a board, followed by component placement and exposure to a temperature profile. Leaded packages, packages with solder balls, and leadless packages are all reflow solderable.

Key characteristics in both wave and reflow soldering are:

- Board specifications, including the board finish, solder masks and vias
- · Package footprints, including solder thieves and orientation
- The moisture sensitivity level of the packages
- Package placement
- Inspection and repair
- Lead-free soldering versus PbSn soldering

14.3 Wave soldering

Key characteristics in wave soldering are:

- Process issues, such as application of adhesive and flux, clinching of leads, board transport, the solder wave parameters, and the time during which components are exposed to the wave
- Solder bath specifications, including temperature and impurities

14.4 Reflow soldering

Key characteristics in reflow soldering are:

- Lead-free versus SnPb soldering; note that a lead-free reflow process usually leads to higher minimum peak temperatures (see <u>Figure 13</u>) than a PbSn process, thus reducing the process window
- Solder paste printing issues including smearing, release, and adjusting the process window for a mix of large and small components on one board
- Reflow temperature profile; this profile includes preheat, reflow (in which the board is heated to the peak temperature) and cooling down. It is imperative that the peak temperature is high enough for the solder to make reliable solder joints (a solder paste characteristic). In addition, the peak temperature must be low enough that the packages and/or boards are not damaged. The peak temperature of the package depends on package thickness and volume and is classified in accordance with Table 12 and 13

Table 12. SnPb eutectic process (from J-STD-020C)

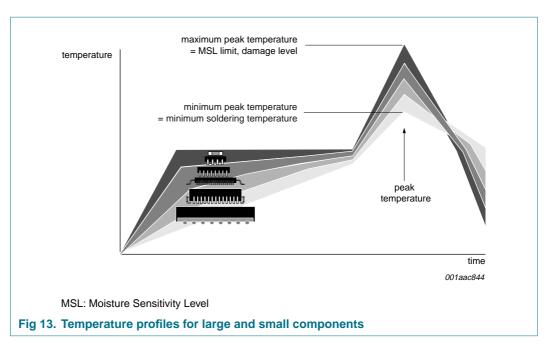

Package thickness (mm)	Package reflow temperature (°C) Volume (mm³)		
	< 350	≥ 350	
< 2.5	235	220	
≥ 2.5	220	220	

Table 13. Lead-free process (from J-STD-020C)

Package thickness (mm)	Package reflow temperature (°C)				
	Volume (mm³)				
	< 350	350 to 2000	> 2000		
< 1.6	260	260	260		
1.6 to 2.5	260	250	245		
> 2.5	250	245	245		

Moisture sensitivity precautions, as indicated on the packing, must be respected at all times.

Studies have shown that small packages reach higher temperatures during reflow soldering, see Figure 13.

For further information on temperature profiles, refer to Application Note *AN10365* "Surface mount reflow soldering description".

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. Nexperia does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local Nexperia sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

17.3 Disclaimers

General — Information in this document is believed to be accurate and reliable. However, Nexperia does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

Right to make changes — Nexperia reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — Nexperia products are not designed, authorized or warranted to be suitable for use in medical, military, aircraft, space or life support equipment, nor in applications where failure or

malfunction of a Nexperia product can reasonably be expected to result in personal injury, death or severe property or environmental damage. Nexperia accepts no liability for inclusion and/or use of Nexperia products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. Nexperia makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) may cause permanent damage to the device. Limiting values are stress ratings only and operation of the device at these or any other conditions above those given in the Characteristics sections of this document is not implied. Exposure to limiting values for extended periods may affect device reliability.

Terms and conditions of sale — Nexperia products are sold subject to the general terms and conditions of commercial sale, as published at http://www.nexperia.com/profile/terms, including those pertaining to warranty, intellectual property rights infringement and limitation of liability, unless explicitly otherwise agreed to in writing by Nexperia. In case of any inconsistency or conflict between information in this document and such terms and conditions, the latter will prevail.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

17.4 Trademarks

Notice: All referenced brands, product names, service names and trademarks are the property of their respective owners.
