# Low-Voltage CMOS Hex Buffer with Open Drain Outputs

# With 5 V - Tolerant Inputs

The 74LVC07A is a high performance hex buffer operating from a 1.2 V to 5.5 V supply. High impedance TTL compatible inputs significantly reduce current loading to input drivers. These LVC devices have open drain outputs which provide the ability to set output levels, or do active—HIGH AND or active—LOW OR functions. A  $\rm V_I$  specification of 5.5 V allows 74LVC07A inputs to be safely driven from 5.0 V devices.

#### **Features**
