

74LVQ157

Low Voltage Quad 2-Input Multiplexer

General Description

The LVQ157 is a high-speed quad 2-input multiplexer. Four bits of data from two sources can be selected using the common Select and Enable inputs. The four outputs present the selected data in the true (noninverted) form. The LVQ157 can also be used as a function generator.

Features

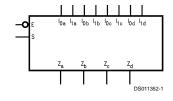

- Ideal for low power/low noise 3.3V applications
- Guaranteed simultaneous switching noise level and dynamic threshold performance
- Guaranteed pin-to-pin skew AC performance
- Guaranteed incident wave switching into 75 Ω .

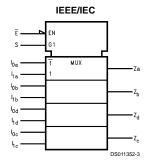

Ordering Code:

Functional Description

The LVQ157 is a quad 2-input multiplexer. It selects four bits of data from two sources under the control of a common Select input (S). The Enable input (\overline{E}) is active-LOW. When \overline{E} is HIGH, all of the outputs (Z) are forced LOW regardless of all other inputs. The LVQ157 is the logic implementation of a 4-pole, 2-position switch where the position of the switch is determined by the logic levels supplied to the Select input. The logic equations for the outputs are shown below:

$$\mathsf{Z}_{\mathsf{a}} = \overline{\mathsf{E}} \bullet (\mathsf{I}_{\mathsf{1a}} \bullet \mathsf{S} + \mathsf{I}_{\mathsf{0a}} \bullet \overline{\mathsf{S}}\,)$$

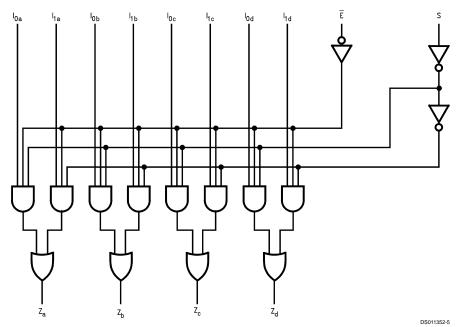

$$Z_b = \overline{E} \cdot (I_{1b} \cdot S + I_{0b} \cdot \overline{S})$$

$$Z_c = \overline{E} \cdot (I_{1c} \cdot S + I_{0c} \cdot \overline{S})$$

$$Z_{d} = \overline{\mathsf{E}} \, \bullet \, (\mathsf{I}_{1d} \, \bullet \, \mathsf{S} + \mathsf{I}_{0d} \, \bullet \, \overline{\mathsf{S}} \,)$$

A common use of the LVQ157 is the moving of data from two groups of registers to four common output busses. The particular register from which the data comes is determined by the state of the Select input. A less obvious use is as a function generator. The LVQ157 can generate any four of the sixteen different functions of two variables with one variable common. This is useful for implementing gating functions.

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 2: Unused inputs must be held HIGH or LOW. They may not float.
