

Description

ACE515A series are 300mA, positive voltage regulator ICs fabricated by CMOS process.

Each of these ICs is equipped with a voltage reference, an error amplifier, a resistor network for setting output voltage, a chip enable circuit, a current limit circuit and OTSD (over temperature shut down) circuit to prevent the IC from over current and over temperature.

The ACE515A series have features of high ripple rejection, low dropout voltage, low noise, high output voltage accuracy and low current consumption which make them ideal for use in various battery-powered apparatus.

The ACE515A have 1.8V, 2.5V, 2.8V, 3.0V, 3.3V, 4.15V and 4.2V fixed voltage versions.

These ICs are available in tiny SC-70-5 and SC-82 packages as well as industry standard SOT-23-3 and SOT-23-5 packages.

Features

- Excellent Ripple Rejection: 70dB Typical (1.8V Version)
- Low Dropout Voltage: 65mV ($I_{OUT}=100mA$, 3.3V Version)
- Low Standby Current: 0.01 μA Typical
- Low Quiescent Current: 60 μA Typical
- Extremely Low Noise: 50 μV_{rms} Typical
- Maximum Output Current: 300mA (Min.)
- High Output Voltage Accuracy: $\pm 2\%$
- Compatible with Low ESR Ceramic Capacitor
- Excellent Line/ Load Regulation

Application

- CDMA/ GSM Cellular Handsets
- Battery-powered Equipments
- Laptops, Palmtops, Notebook Computers
- Hand-held Instruments
- PCMCIA Cards
- Portable Information Appliances

Absolute Maximum Ratings

Parameter	Symbol	Max	Unit
Input voltage	V _{IN}	6.5	V
Enable Input Voltage	V _{CE}	-0.3 to V _{IN} +0.3	V
Output Current	I _{OUT}	450	mA
Junction Temperature	T _J	150	°C
Storage Temperature Range	T _{STG}	-65 to 150	°C
Lead Temperature (Soldering, 10sec)	T _{LEAD}	260	°C
Thermal Resistance SOT-23-3 SOT-23-5 SC-70-5 SC-82	θ _{JA}	200 200 300 300	°C/W
ESD (Human Body Model)	ESD	6000	V
ESD (Machine Model)	ESD	400	V

Note 1: Stresses greater than those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “Recommended Operating Conditions” is not implied. Exposure to “Absolute Maximum Ratings” for extended periods may affect device reliability.

Packaging Type

Notes

ACE does not assume any responsibility for use as critical components in life support devices or systems without the express written approval of the president and general counsel of ACE Electronics Co., LTD.

As sued herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
