

ACFM-7325

Band Class 14 PCS /

Band Class 10 Cellular Band Quadplexer

Data Sheet

Description

The Avago Technologies' ACFM-7325 is an extended frequency range quadplexer that combines a PCS (Band Class 14) and Cellular (Band Class 10) duplexer into a single, miniature package.

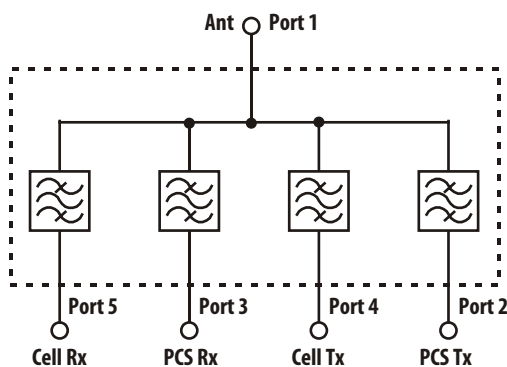

The ACFM-7325 features a single antenna connection, eliminating the need for antenna switching.

The ACFM-7325 is designed with Avago Technologies' Film Bulk Acoustic Resonator (FBAR) technology. The ACFM-7325 also utilizes Avago Technologies' innovative Microcap bonded-wafer, chip scale packaging technology. This process allows the filters to be assembled in a module with a footprint of only 4 x 7 mm with a maximum height of 1.2 mm.

Low Tx Insertion Loss of the ACFM-7325 reduces power amplifier current, extending battery life and talk time. The ACFM-7325 enhances receiver sensitivity and dynamic range with low Rx Insertion Loss and high rejection of Tx signals at the Rx ports.

The excellent power handling capability of Avago Technologies' FBAR bulk-mode resonators supports the high Tx output power levels needed in handsets while adding virtually no distortion

Functional Block Diagram

Features

- Extended frequency ranges
 - Band Class 14 PCS
 - Band Class 10 Cellular
- Single Antenna
- Miniature size
 - 4 x 7 mm footprint
 - 1.2 mm Max height
- High Power Rating
 - +33 dBm Max Tx Power
- Environmental
 - RoHS 6 Compliant
 - Halogen Free
 - TBBPA Free

Specifications

- Performance guaranteed -10 to +85° C
- Cellular Duplexer Rx (862 – 894 MHz)
 - Insertion Loss: 3.9 dB Max
 - Noise Blocking: 45 dB Min
- Cellular Duplexer Tx (817 – 849 MHz)
 - Insertion Loss: 2.9 dB Max
 - Interferer Blocking: 55 dB Min
- PCS Duplexer Rx (1930.5 – 1994.45 MHz)
 - Insertion Loss: 4.0 dB Max
 - Noise Blocking: 40 dB Min
- PCS Duplexer Tx (1850.5 – 1914.4 MHz)
 - Insertion Loss: 4.1 dB Max
 - Interferer Blocking: 53 dB Min

Applications

- Handsets or data terminals operating in Band Class 14 PCS and Band Class 10 Cellular frequency bands

ACFM-7325 Electrical Specifications, $Z_0 = 50 \Omega$, TC ^{[1][2][4]} as indicated

Band 10 Class (Cell) Duplexer Performance

Symbol	Parameter	Units	-10° C		+25° C			+85° C	
			Min	Max	Min	Typ ^[3]	Max	Min	Max
Antenna Port to Cellular Receive Port

Notes:

1. T_C is defined as Case Temperature, the temperature of the bottom mounting surface of the quadplexer where it makes contact with the circuit board.
2. Min/Max specifications are guaranteed at the indicated temperature with the input power to the Tx ports equal to or less than +29 dBm over all Tx frequencies unless otherwise noted.
3. Typical data is the arithmetic mean value of the parameter over its indicated frequency range at the specified temperature. Typical values may vary over time.
4. Specifications are for circuit shown in Figure 1 and include effect of 5.1 nH inductor and 1.0 pF capacitor added to Port 1 (Ant) via simulation.

Absolute Maximum Ratings^[1]

Parameter	Unit	Value
Storage temperature	°C	-65 to +125
Maximum RF Input Power to Tx Ports	dBm	+33

Maximum Recommended Operating Conditions^[2]

Parameter	Unit	Value
Operating temperature, T_c ^[3] , Tx Power \leq 29 dBm	°C	-40 to +100
Operating temperature, T_c ^[3] , Tx Power \leq 30 dBm	°C	-40 to +85

Notes:

1. Operation in excess of any one of these conditions may result in permanent damage to the device.
2. The device will function over the recommended range without degradation in reliability or permanent change in performance, but is not guaranteed to meet electrical specifications.
3. T_c is defined as Case Temperature, the temperature of the bottom mounting surface of the quadplexer where it makes contact with the circuit board.

ACFM-7325

Applications Information

The ACFM-7325 quadplexer has a single antenna connection common to the both the Cellular and PCS Band duplexers.

Operation

A two-element series-L, shunt-C network is used to match the impedance of the Ant port to 50 ohms as shown in Figure 1.

Matching Components

The nominal values for L and C shown here were selected to match the ACFM-7325 to 50 ohms. Since every application is different, these nominal values may need to be adjusted to provide the best impedance match for the user's particular circuit board, performance requirements, and interface to related components.

The L and C matching components should be located in close proximity to the quadplexer as shown in the recommended PCB layout.

The maximum tolerance for the matching components should be $\pm 5\%$ for the inductor and ± 0.2 pF for the capacitor. The inductor should be of the high Q type (e.g., Murata LQW15AN5N1D00D).

Notes:

1. Performance shown includes effect of 5.1 nH inductor and 1.0 pF capacitor added to Port 1 (Ant) via simulation as shown in Figure 1.

ACFM-7325

Notes:

1. Dimensions in mm
2. Tolerance: X.X ± 0.1, X.XX ± 0.05
3. Max OD: 4.1 x 7.1 x 1.2 mm
4. IO pads (5 ea), 0.35 x 0.35, pad to ground plane spacing = 0.03
5. Non-ground vias (6 ea) shown for reference only; covered with 0.35 Ø solder mask
Note: PCB metal on mother board under non-ground vias does not need to be voided
6. Contact areas are gold plated

Figure 38. Package Outline Drawing.

Figure 39. Locations of Non-Ground (Signal) Vias (bottom view).

ACFM-7325

Notes:

1. Dimensions in mm
2. Areas shown are location of transmit filters. Adequate heat sinking should be provided for these areas by means of ground/thermal vias. Heat sink areas on the PCB should be larger than the dimensions shown to allow for thermal spreading.
3. Dimensions are referenced to bottom metal pattern. (Top view)

Figure 40. Location of Heat Sink Areas (top view).

Notes:

1. Dimensions in mm
2. Pads for I/O terminals and ground area are 1:1 with package bottom metal pattern.

Figure 41. PCB Footprint (top view).

ACFM-7325

Notes:

1. Dimensions in mm
2. Dimensions W and T should be adjusted for 50-ohm line impedance (beyond the footprint).
3. Includes provision for series inductor and shunt capacitor (0402 size) at Ant terminal.

Figure 42. Recommended PCB Layout (top view).

Note:

1. Antenna matching components shown are 0402 size.

Figure 43. PCB Layout with ACFM-7325 and Ant Matching Components Superposed (top view).

Notes:

1. Dimensions in mm
2. Openings aligned to either Boundary Rectangle or Center Line
3. Openings "B" are equally spaced horizontally. Ref: Spacing = 0.514

Stencil Opening ID	Qty	Width	Height
A (I/O pad areas)	5	0.35	0.35
B	9	0.40	2.00
C	5	0.80	0.40

Figure 45. Recommended Solder Stencil (top view).

The I/O pad openings ("A") in the recommended solder stencil are the same size as the I/O pad metal patterns on the ACFM-7325.

The stencil pattern for the large ground pad area is divided into smaller openings ("B" through "C") for the purpose of reducing the volume of solder paste. The use of smaller apertures reduces risk of solder voiding as well as preventing the device from "floating" during reflow.
