Octal D-Type Latch With 3-State Outputs

Description

The 'AC/'ACT573 is a high-speed octal latch with buffered common Latch Enable (LE) and buffered common Output Enable (\overline{OE}) inputs.

The 'AC/'ACT573 is functionally identical to the 'AC/'ACT373 but has Inputs and outputs on opposite sides.

- Inputs and Outputs on Opposite Sides of Package Allowing Easy Interface with Microprocessors
- Useful as input or Output Port for Microprocessors
- Functionally Identical to 'AC/'ACT373
- 3-State Outputs for Bus Interfacing
- Outputs Source/Sink 24 mA
- 'ACT573 has TTL-Compatible Inputs

Functional Description

The 'AC/ACT573 contains eight D-type latches with 3-state output buffers. When the Latch Enable (LE) input is HIGH, data on the D_n inputs enters the latches. In this condition the latches are transparent, i.e., a latch output will change state each time its D input changes. When LE is LOW the latches store the information that was present on the D inputs a setup time preceding the HIGH-to-LOW transition of LE. The 3-state buffers are controlled by the Output Enable (\overline{OE}) input. When \overline{OE} is LOW, the buffers are enabled. When \overline{OE} is HIGH the buffers are in the high impedance mode but this does not interfere with entering new data into the latches.

Truth Table

Inputs			Outputs
\overline{OE}	LE	D	O _n
L	H	H	H
L	H	L	H
L	L	X	O ₀
H	X	X	Z

H = HIGH Voltage
 L = LOW Voltage
 Z = High Impedance
 X = Immaterial
 O₀ = Previous O₀ before LOW-to-HIGH Transition of Clock

Logic Diagram
