SOLID STATE OPTRONICS

AD4C112

Dual 1 Form B
Solid State Relay

DESCRIPTION

The AD4C112 is composed of two distinct 1 Form B (normally closed) relays in one compact 8 pin DIP package. Each relays consists of an AlGaAs LED optically coupled to a Photo Diode Arra, driving a pair of rugged source-to-source depletion type DMOS transistors. The output MOS transistors are protected with free-wheeling diodes that can handle up to 1.5A of inrush current, making the relay ideal for switching lamps and highly inductive loads.

FEATURES

- Low input control power consumption (2.5mA TYP)
- 120mA maximum continuous load current
- 35 ohms maximum on-resistance
- Long life/high reliability
- High input-to-output isolation

APPLICATIONS

- Reed relay replacement
- Meter reading systems
- Medical equipment
- Battery monitoring
- Multiplexers

OPTIONS/SUFFIXES*

- -S Surface Mount Option
- -TR Tape and Reel Option

NOTE: Suffixes listed above are not included in marking on device for part number identification.
