

#### **DESCRIPTION**

The AD4C541 is a bi-directional, double-pole, single-throw, normally open solid-state relay. This device consists of two discrete relays in a compact 8 pin package. Each relay is composed of a AlGaAs LED optically coupled to an IC--driving a pair of source-to-source enhancement type DMOS transistors. Low on-resistance allows for a high load current rating--making the AD4C541 ideal in applications where packaging density and high load current requirements present unique design challenges.

#### **FEATURES**

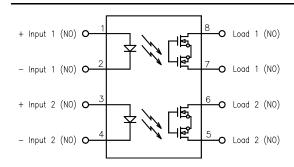

- Low On-Resistance (1 ohm MAX)
- Low input control power consumption (2.5mA TYP)
- High load current rating (700mA MAX, single pole)
- High input-to-output isolation (2500V MIN)
- Long life/high reliability

## **OPTIONS/SUFFIXES\***

- -H High Output Isolation
- -S Surface Mount Option
- -TR Tape and Reel Option

NOTE: Suffixes listed above are not included in marking on device for part number identification.

# SCHEMATIC DIAGRAM

#### **APPLICATIONS**

- Reed relay replacement
- Meter reading systems
- Medical equipment
- Battery monitoring
- Multiplexers

## ABSOLUTE MAXIMUM RATINGS\*

| PARAMETER                        | UNIT | MIN | TYP | MAX |
|----------------------------------|------|-----|-----|-----|
| Storage Temperature              | °C   | -55 |     | 125 |
| Operating Temperature            | °C   | -40 |     | 85  |
| Continuous Input Current         | mA   |     |     | 40  |
| Transient Input Current          | mA   |     |     | 400 |
| Reverse Input Control<br>Voltage | V    | 6   |     |     |
| Output Power Dissipation         | mW   |     |     | 800 |

<sup>\*</sup>The values indicated are absolute stress ratings. Functional operation of the device is not implied at these or any conditions in excess of those defined in electrical characteristics section of this document. Exposure to Absolute Ratings may cause permanent damage to the device and may adversely affect reliability.

#### **DISCLAIMER**

Solid State Optronics (SSO) makes no warranties or representations with regards to the completeness and accuracy of this document. SSO reserves the right to make changes to product description, specifications at any time without further notice. SSO shall not assume any liability arising out of the application or use of any product or circuit described herein. Neither circuit patent licenses nor indemnity are expressed or implied.

Except as specified in SSO's Standard Terms & Conditions, SSO disclaims liability for consequential or other damage, and we make no other warranty, expressed or implied, including merchantability and fitness for particular use.

#### LIFE SUPPORT POLICY

SSO does not authorize use of its devices in life support applications wherein failure or malfunction of a device may lead to personal injury or death. Users of SSO devices in life support applications assume all risks of such use and agree to indemnify SSO against any and all damages resulting from such use. Life support devices are defined as devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when used properly in accordance with instructions for use can be reasonably expected to result in significant injury to the user, or (d) a critical component in any component of a life support device or system whose failure can be reasonably expected to cause failure of the life support device or system, or to affect its safety or effectiveness.
