
ADNS-2080

Low Power Optical Mouse Sensor

Data Sheet

Lead (Pb) Free
RoHS 6 fully
compliant

Description

The PixArt Imaging ADNS-2080 is a low power, small form factor optical mouse sensor. It has a new low-power architecture and automatic power management modes, making it ideal for battery, power-sensitive applications – such as cordless input devices.

The ADNS-2080 is capable of high-speed motion detection – up to 30 ips and 20 g. In addition, it has an on-chip oscillator and requires an external resistor to set the LED current.

The ADNS-2080 along with the ADNS-5110-001 lens, or ADNS-5120-002 lens, LED clip, and HSDL-4261 IR LED, or HLMP-EG3E-xxxxx Red LED form a complete and compact mouse tracking system. There are no moving parts and this translates to high reliability and less maintenance for the end user. In addition, precision optical alignment is not required, facilitating high volume assembly.

The sensor is programmed via registers through a two-wire serial port. It is housed in an 8-pin staggered dual in-line package (DIP).

Features

- Low Power Architecture
- Small Form Factor
- Programmable Periods / Response Times and Downshift Times from one mode to another for the Power-saving Modes
- High Speed Motion Detection up to 30 ips and 20 g
- External Interrupt Output for Motion Detection
- Internal Oscillator – no clock input needed
- Selectable Resolution of up to 2000 cpi
- Operating Voltage: as low as 2.1 V
- IO reference voltage of 1.7 V to 3.3 V
- 2-wire serial port interface

Applications

- Optical mice and optical trackballs
- Integrated input devices
- Battery-powered input devices

Theory of Operation

The ADNS-2080 is based on Optical Navigation Technology, which measures changes in position by optically acquiring sequential surface images (frames) and mathematically determining the direction and magnitude of movement.

The ADNS-2080 contains an Image Acquisition System (IAS), a Digital Signal Processor (DSP), and a two wire serial port.

The IAS acquires microscopic surface images via the lens and illumination system. These images are processed by the DSP to determine the direction and distance of motion. The DSP calculates the Dx and Dy relative displacement values.

An external microcontroller reads and translates the Dx and Dy information from the sensor serial port into PS2, USB, or RF signals before sending them to the host PC.

Pinout of ADNS-2080 Optical Mouse Sensor

Pin	Name	Input/Output	Description
1	SDIO	I/O	Serial Data Input/Output
2	LED	I	LED Illumination
3	MOTION	O	Motion Interrupt Output (Default active low, edge triggered)
4	VDDIO	I	Input/Output Reference Voltage
5	SCLK	I	Serial Clock
6	GND	I	Ground
7	VDD	O	Regulator output
8	VDDA	I	Supply Voltage

Overview of Optical Mouse Sensor Assembly

PixArt Imaging provides an IGES file drawing describing the base plate molding features for lens and PCB alignment. The ADNS-2080 sensor is designed for mounting on a through-hole PCB, looking down. There is an aperture stop and features on the package that align to the lens. The ADNS-5110-001 and ADNS-5120-002 lens provides optics for the imaging of the surface as well as the illumination of the surface at the optimum angle. Features on the lens align it to the sensor, base plate, and clip with the LED. The LED clip holds the LED in relation to the lens. The LED must be inserted into the clip and the LED's leads formed prior to loading on the PCB. The LEDs recommended for illumination include HSDL-4261 IR LED and HLMP-EG3E Red LED.

Design Considerations for Improved ESD Performance

For improved electrostatic discharge performance, typical creepage and clearance distance are shown in the table below. Assumption: base plate construction is as per the PixArt Imaging supplied IGES file and ADNS-5110-001 and ADNS-5120-002 lens. Note that the lens material is polycarbonate or polystyrene HH30. Therefore, cyanoacrylate based adhesives or other adhesives that may damage the lens should **NOT** be used.

Typical	Distance (mm)
Creepage	16.0
Clearance	2.0

Regulatory Requirements

- Passes FCC B and worldwide analogous emission limits when assembled into a mouse with shielded cable and following PixArt Imaging recommendations.
- UL flammability level UL94 V-0.
