

FEATURES

Ultracompact solution

- Small, 2 mm × 1.5 mm, 12-ball WLCSP package
- Smallest footprint, 1 mm height, 1 μH power inductor
- LED current source for local LED grounding
- Simplified routing to/from LED
- Improved LED thermals

Synchronous 3 MHz PWM boost converter, no external diode

High efficiency: 90% peak

- Reduces high levels of input battery current during flash
- Limits battery current drain in torch mode

I²C programmable

- Currents up to 1500 mA in flash mode for one LED with 7% accuracy over all conditions
- Currents up to 200 mA in torch mode
- Programmable dc battery current limit (4 settings)
- Programmable flash timer up to 1600 ms
- Low VBAT mode to reduce LED current automatically
- 4-bit ADC for LED V_F, die/LED temperature readback

Control

- I²C-compatible control registers
- External STROBE and torch input pins
- 2 transmitter mask (TxMASK) inputs

Safety

- Thermal overload protection
- Inductor fault detection
- LED short-/open-circuit protection

APPLICATIONS

- Camera-enabled cellular phones and smart phones
- Digital still cameras, camcorders, and PDAs

GENERAL DESCRIPTION

The ADP1650 is a very compact, highly efficient, single white LED flash driver for high resolution camera phones that improves picture and video quality in low light environments. The device integrates a programmable 1.5 MHz or 3.0 MHz synchronous inductive boost converter, an I²C-compatible interface, and a 1500 mA current source. The high switching frequency enables the use of a tiny, 1 mm high, low cost, 1 μH power inductor, and the current source permits LED cathode grounding for thermally enhanced, low EMI, and compact layouts.

The LED driver maximizes efficiency over the entire battery voltage range to maximize the input-power-to-LED-power

For more information about the ADP1650, contact Analog Devices, Inc., Sales Office, at <http://www.analog.com/sales>.

conversion and minimize battery current draw during flash events. A programmable dc battery current limit safely maximizes LED current for all LED V_F and battery voltage conditions.

Two independent TxMASK inputs permit the flash LED current and battery current to reduce quickly during a power amplifier current burst. The I²C-compatible interface enables the programmability of timers, currents, and status bit readback for operation monitoring and safety control.

The ADP1650 comes in a compact 12-ball, 0.5 mm pitch package and operates within specification over the full -40°C to +125°C junction temperature range.
