

AH118

¼ Watt, High Linearity InGaP HBT Amplifier

Applications

- Final stage amplifiers for Repeaters
- Mobile Infrastructure

SOT-89 Package

Product Features

- 60 – 3500 MHz
- +24.7 dBm P1dB
- +40.5 dBm Output IP3
- 20.4 dB Gain @ 900 MHz
- 16.5 dB Gain @ 1900 MHz
- +5V Single Positive Supply
- Lead-free/Green/RoHS-compliant SOT-89 Package

Functional Block Diagram

General Description

The AH118 is a high dynamic range driver amplifier in a low-cost surface mount package. The InGaP/GaAs HBT is able to achieve high performance across a broad range with +40.5 dBm OIP3 and +24.7 dBm of compressed 1dB power. The AH118 is available in a lead-free/green/RoHS-compliant SOT-89 package. All devices are 100% RF and DC tested.

The AH118 is targeted for use as a driver amplifier in wireless infrastructure where high linearity and medium power is required. Internal biasing allows the AH118 to maintain high linearity over temperature and operate directly off a single +5V supply. This combination makes the device an excellent candidate for transceiver line cards in current and next generation multi-carrier 3G base stations.

Device Characterization Data

Note:

1. S-Parameters ($V_{Device} = +5\text{ V}$, $I_{CC} = 160\text{ mA}$, $25\text{ }^\circ\text{C}$, unmatched 50 ohm system).
2. The gain for the unmatched device in 50 ohm system is shown as the trace in black color. For a tuned circuit for a particular frequency, it is expected that actual gain will be higher, up to the maximum stable gain. The maximum stable gain is shown in the dashed red line.
3. The impedance plots are shown from 0.5 – 6 GHz, with markers placed at 0.5 – 6.0 GHz in 0.5 GHz increments.

1/4 Watt, High Linearity InGaP HBT Amplifier

Reference Design 920-960 MHz (AH118-89PCB900)

Notes:

1. The diode D1 is used as over-voltage protection on the evaluation boards. It is not specifically required in the final circuit layout in a system using a DC regulator.
2. L2 - the 0 Ω resistor - can be removed (with a thru line) in the final circuit layout.
3. The distance from U1 pin1 pad to the edge of C7 is 120 mil.
4. The distance from U1 pin3 pad to the edge of C9 is 350 mil.

Pin Description

Pin	Symbol	Description
1	RF IN	RF Input. DC voltage present, blocking cap required
2	GND	No electrical connection. Provide an isolated or grounded solder pad for mounting integrity
3	RF OUT	RF Output. DC voltage present, blocking cap required
4	GND PADDLE	Multiple vias should be employed to minimize inductance and thermal resistance

Applications Information

PC Board Layout

Circuit Board Material: .062" total thickness with a .014" Getek top RF layer, 4 layers (other layers added for rigidity), 1 oz copper, Microstrip line details: width = .026", spacing = .026" The silk screen markers 'A', 'B', 'C', etc. and '1', '2', '3', etc. are used as placemarkers for the input and output tuning.

The pad pattern shown has been developed and tested for optimized assembly at TriQuint Semiconductor. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.

Mechanical Information

Package Information and Dimensions

This package is lead-free/Green/RoHS-compliant. It is compatible with both lead-free (maximum 260 °C reflow temperature) and leaded (maximum 245 °C reflow temperature) soldering processes. The plating material on the leads is NiPdAu.

The AH118 will be marked with an "AH118G" designator with a lot code marked below the part designator. The "Y" represents the last digit of the year the part was manufactured, the "XXX" is an auto-generated number, and "Z" refers to a wafer number in a lot batch

Mounting Configuration

All dimensions are in millimeters (inches). Angles are in degrees.

Notes:

1. Ground / thermal vias are critical for the proper performance of this device. Vias should use a .35mm (#80 / .0135") diameter drill and have a final plated thru diameter of .25 mm (.010").
2. Add as much copper as possible to inner and outer layers near the part to ensure optimal thermal performance.
3. Mounting screws can be added near the part to fasten the board to a heatsink. Ensure that the ground / thermal via region contacts the heatsink.
4. Do not put solder mask on the backside of the PC board in the region where the board contacts the heatsink.
5. RF trace width depends upon the PC board material and construction.
6. Use 1 oz. Copper minimum.
7. All dimensions are in millimeters (inches). Angles are in degrees.

Product Compliance Information

ESD Information

Caution! ESD-Sensitive Device

ESD Rating: Class 1A
Value: Passes between 250 and 500V.
Test: Human Body Model (HBM)
Standard: JEDEC Standard JESD22-A114

MSL Rating

Level 3 at +260 °C convection reflow
The part is rated Moisture Sensitivity Level 3 at 260°C per JEDEC standard J-STD-020.

Solderability

Compatible with the latest version of J-STD-020, Lead free solder, 260°

This part compliant with EU 2002/95/EC RoHS directive (Restrictions on the Use of Certain Hazardous Substances in Electrical and Electronic Equipment).

This product also has the following attributes:

- Lead Free
- Halogen Free (Chlorine, Bromine)
- Antimony Free
- TBBP-A (C₁₅H₁₂Br₄O₂) Free
- PFOS Free
- SVHC Free
