

AK632512AW - 64 Pin Version

524,288 x 32 Bit CMOS / BiCMOS

Static Random Access Memory

DESCRIPTION

The Accutek AK632512AW SRAM Module consists of fast high performance SRAMs mounted on a low height, 64 pin SIM Board. The module utilizes four 36 pin 512K x 8 SRAMs in 400 mil SOJ packages and four decoupling capacitors mounted two on the front side and two on the back side of a printed circuit board.

The SRAMs used have common I/O functions and single output enable functions. Also, four separate chip select (\overline{CE}) connections are used to independently enable the four bytes. The modules can be supplied in a variety of access time values from 15 nSEC to 35 nSEC in CMOS or BiCMOS technology.

The Accutek module is designed to have a maximum seated height of 0.640 inch SIM to provide for the lowest height off the board. The module conforms to JEDEC-standard size. The Presence Detect feature has been disabled on this 64 pin module. The customer must jumper his board to provide density identification. The available 72 pin module has the Presence Detect feature operational.
