# 1 Features

LCD 3.2 inch Amorphous-TFT-LCD (Thin Film Transistor Liquid Crystal Display) for mobile-phone or handy electrical equipments.

- (1) Construction: 3.2" a-Si color TFT-LCD, White LED Backlight and FPCB.
- (2) Main LCD : 2.1 Amorphous-TFT 3.2 inch display, transmissive, Normally white type, 9 o'clock.
  - 2.2 240(RGB)X320 dots Matrix,1/320 Duty.
  - 2.3 Narrow-contact ledge technique.
  - 2.4 Main LCD Driver IC: ILI9325C equivalent.
  - 2.5 262K: Red-6bit, Green-6bit, Blue-6bit (18-bit interface)
- (3) Low cross talk by frame rate modulation
- (4) Direct data display with display RAM
- (5) Partial display function: You can save power by limiting the display space.
- (6) Interface: MPU and RGB Interface. (Select by H/W Jumper). Default: MCU Interface.
- (7) SPI and Digital RGB 18-bit interface selectable.

IM3	IM2	IM1	IM0	MPU mode	DB Pin in use	Remark
PIN9	JP2	PIN8	PIN7

						SPI, RGB Interface

\* Others setting invalid

(8) Abundant command functions:

Area scroll function

Display direction switching function

Power saving function

Electric volume control function: you are able to program the temperature compensation function.

# 2 Mechanical specifications

### Dimensions and weight

	Item	Specifications	Unit
Active Display Size		3.2 inch diagonal(81.28mm)	mm
	Outline Dimension	55.64 (H) x 77.3(V)	mm
Main	Pixel pitch	0.2025 (H) x 0.2025(V)	mm
LCD	Active area	48.6 (H) x 64.8 (V)	mm
	Number of Pixels	240(H)x320(V) pixels	mm

\*1. This specification is about External shape on shipment from AMPIRE.

# 3 Absolute max. ratings and environment

3-1 Absolute max. ratings

Ta=25°C GND=0V

Item	Symbol	Min.	Max.	Unit	Remarks
Power voltage	VDD – GND	-0.3	+3.3	V	
Power voltage	LED A – LED K	-0.5	+4.0	V	Parallel
Input voltage	VIN	-0.5	VDD	V	

### 3-2 Environment

Item	Specifications	Remarks
Storage	Max. +80 °C	Note 1:
temperature	Min30 °C	Non-condensing
Operating	Max. +70 °C	Note 1:
temperature	Min10 °C	Non-condensing

Note 1 : Ta  $\leq$  +40 °C · · · Max.85%RH

Ta>+40 °C  $\cdot \cdot \cdot$  The max. humidity should not exceed the humidity with 40 °C 85%RH.

# 4 Electrical specifications

#### Serial Peripheral interface (SPI) 7-5

The system interface of ILI9325C also includes the Serial Peripheral Interface (SPI). In SPI mode (JP2 1, 2 short on FPC), /CS, SCL, SDI and SDO are used to transfer data between MCU and ILI9325C. IM0/ID pin served as the ID pin. Figure 7-9 illustrates the detail timing while using SPI. Be aware that the unused pins such as DB17-0 pins must be fixed at either IOVCC or GND level.

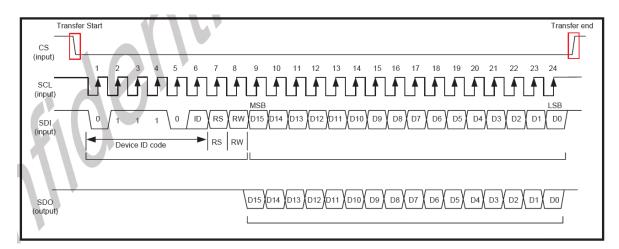

Figure 7-9

Start Byte Format									
Transferred bits	S	1	2	3	4	5	6	7	8
Start byte format	Transfer start	Device ID	code					RS	R/W
		0	1	1	1	0	ID		
Note 1) ID bit is selected by settin	ng the IM0/ID pin.								

RS	R/W	Function
0	0	Set an index register
0	1	Read a status
1	0	Write an instruction or RAM data
1	1	Read an instruction or RAM data

The instruction and GRAM accessing format o Serial Peripheral interface are shown in Figure 7-10 and Figure 7-11 respectively.

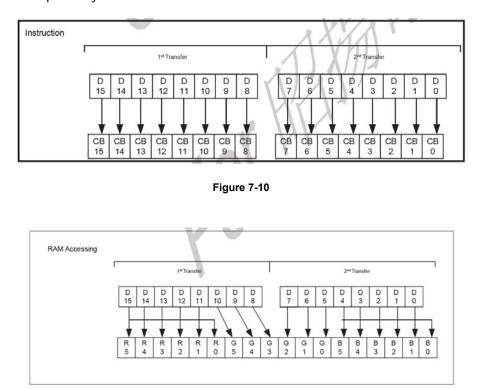

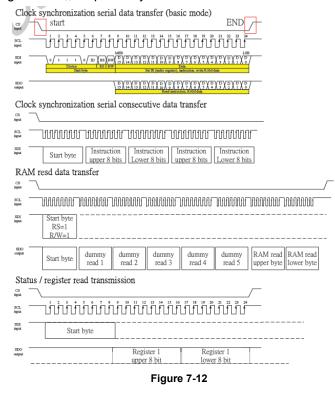

Figure 7-11

When read operation is desired In SPI mode, valid data are read out as the ILI9325C reads out the 6th byte data from the internal GRAM. The RAM data transfer in SPI mode, in SPI mode with status read are illustrated in Figure 7-12,, respectively.

# 7-6 RGB Interface

AM-240320D5TOQW-00H also includes external (RGB) interface for displaying moving picture.

External interface can be set by RIM1-0 bit. Table 7-1summarized the corresponding types of RGB interface with RIM1-0 setting.

RIM1	RIM0	RGB Interface	DB Pin
0	0	18-bit RGB interface	DB17-0
0	1	16-bit RGB interface	DB17-10, 8-1
1	0	6-bit RGB interface	DB17-12
1	1	Setting disabled	

Table 7-1

RGB interface cab access ILI9325C by VSYNC, HSYNC, ENABLE, DOTCLK and DB17-0 signals, where VSYNC is used for frame synchronization; HSYNC is used for line synchronization and ENABLE is served as the valid data synchronized signals. The RGB interface can be rewriting minimum necessary data to the GRAM area which need to be overwritten with use of window address function and high-speed write mode. It is necessary for RGB interface to set front and back porch periods after and before a display period, respectively. Figure 7-13 illustrates the general timing for RGB interface. There are some constrain while using RGB interface. The following summarized the conditions

(a) Partial display/ scroll function / interlace and graphics operation function are not available for RGB interface.

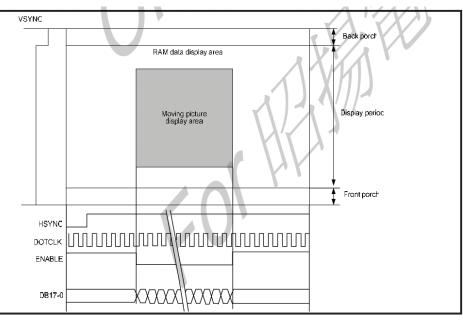

(b) In RGB interface VSYNC, HSYNC, and DOTCLK signals must be input through a display operation period.

(c) The setting of the NO1-0 bits, STD1-0 bits and EQ1-0 bits are based on DOTCLK in RGB interface mode. In 6-bit RGB interface mode, it takes 3 DOTCLK inputs to transfer one pixel. Be aware data transfer in units of 3 DOTCLK inputs in 6-bit RGB interface mode is necessary. Set the cycle of each signal in 6-bit interface mode (VSYNC, HSYNC ENABLE, DB17-0) to input 3x clock to complete data transfer in units of pixels.

(d) In RGB interface mode, the front porch period continues until the next VSYNC input is detected after drawing one frame.

(e) In RGB interface mode, a GRAM address (DB17-0) is set in the address counter every frame on the falling edge of VSYNC.

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP

RGB interface includes ENABLE signal served as valid data synchronized signals. Moreover, the active level for ENABLE can be set by EPL. The EPL bit inverts the polarity of ENABLE signal. Table 7-2 summarized the setting of EPL and ENABLE active level for GRAM accessing. Setting both EPL and ENABLE bits to automatically update RAM address in the AC is necessary while writing data to the GRAM.

EPL	ENABLE	RAM Write	RAM Address
0	0	Enabled	Updated
0	1	Disenabled	Retained
1	0	Disenabled	Retained
1	1	Enabled	Updated

Table 7-2

ILI9325C can support 18-bit, 16-bit and 6-bit RGB interface. The detail timing diagram for 18-bit, 16-bit and 6-bit RGB interface are shown in Figure7-14 and Figure 7-15respectively.

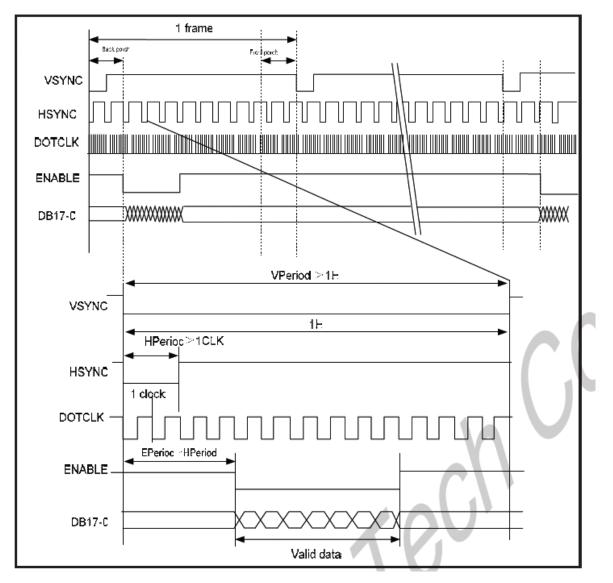

Figure 7-14

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP

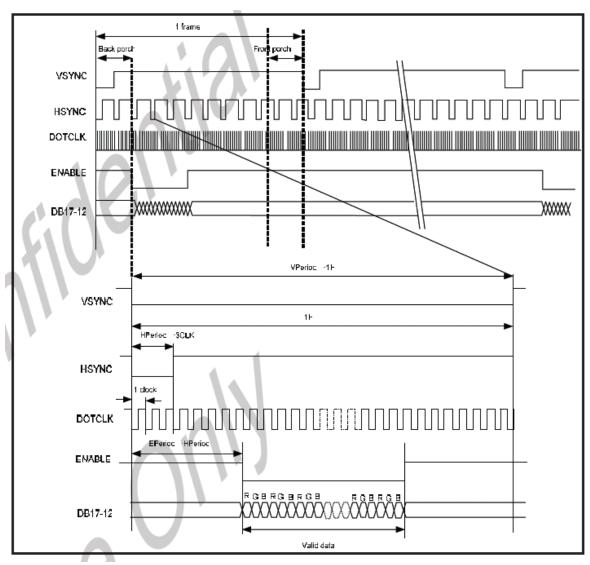

Figure 7-15

The RGB interface also has the window address function to transfer only minimum necessary data on the moving picture GRAM area, which can lower the power consumption and still can use system interface to rewrite data in still picture RAM area while displaying a moving picture. Setting RM = 0 while in RGB interface mode can make GRAM access through the system interface. When RGB interface accessing GRAM is desired, wait for one read/write bus cycle following by RM = 1 setting. Figure 7-16 illustrates the timing diagram when displaying a moving picture through the RGB interface and rewriting data in the still picture GRAM area through the system interface.

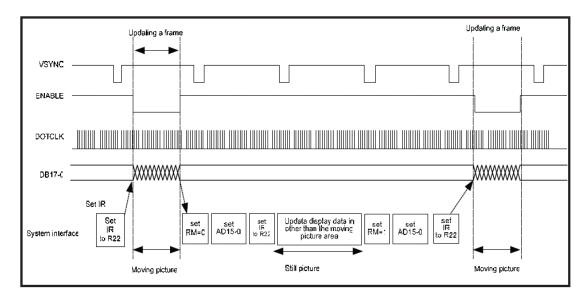

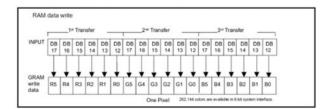

Figure 7-16

### \* 6-bit RGB interface

RAM accessing format and data transmission synchronization of 6-bit RGB interface are shown in Figure 7-17 and Figure 7-18, respectively.

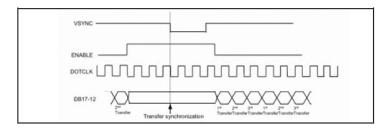

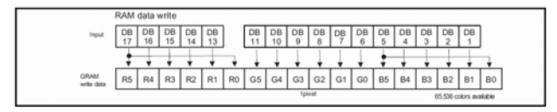

Figure 7-18

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP

### \* 16-bit RGB interface

RAM accessing format of 16-bit RGB interface are shown in Figure 7-19.

### \* 18-bit RGB interface

RAM accessing format of 18-bit RGB interface are shown in Figure 8-21.

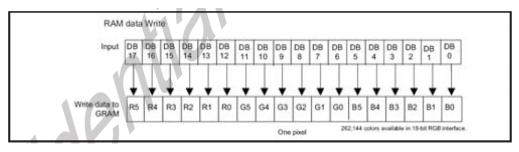

Figure 7-20

# 10 QUALITY AND RELIABILITY

### 10-1 TEST CONDITIONS

Tests should be conducted under the following conditions :

Ambient temperature	$25 \pm 5^{\circ}C$
Humidity	$60\pm25\%$ RH.

### 10-2 SAMPLING PLAN

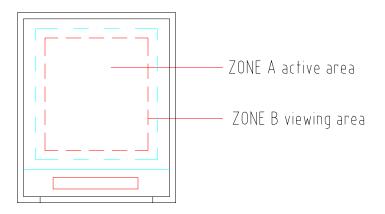

Sampling method shall be in accordance with MIL-STD-105E , level II, normal single sampling plan .

### 10-3 ACCEPTABLE QUALITY LEVEL

A major defect is defined as one that could cause failure to or materially reduce the usability of the unit for its intended purpose. A minor defect is one that does not materially reduce the usability of the unit for its intended purpose or is an infringement from established standards and has no significant bearing on its effective use or operation.

### 10-4 APPEARANCE

An appearance test should be conducted by human sight at approximately 30 cm distance from the LCD module under florescent light. The inspection area of LCD panel shall be within the range of following limits.

No.	ltem	Criterion	for c	lefects	Class of Defec	Accept able level			
1	Non display	No non display is allowed	Major	0.65					
2	Scratch,Dent of Plastic Mold	Serious one is not allowed	Major	0.65					
3	Scratch on FPC	By limited sample	By limited sample						
		Item		Number					
4	Dat Dafaat	Bright dot defect		$N \leq 0$	Minor	1 5			
4	Dot Defect	Black dot defect		$N \leq 2$	Minor	1.5

### 10-6 RELIABILITY

Test Item	Test Conditions	Note
High Temperature Operation	70±3°C , t=72 hrs	
Low Temperature Operation	-10±3°C , t=72 hrs	
High Temperature Storage	80±3°C , t=72hrs	1,2
Low Temperature Storage	-30±3°C , t=72 hrs	1,2
Temperature /Humidity Storage Test	60°C, Humidity 90%, 72 hrs	1,2
Temperature /Humidity Operation Test	40°C, Humidity 90%, 72 hrs	1,2
Thermal Shock Test	-20°C ~ 70°C 60 min 60 min. ( 1 cycle ) Total 20 cycle	1,2
Vibration Test (Packing)	Sweep frequency : 10~55~10 Hz/1min Amplitude : 0.75mm Test direction : X.Y.Z/3 axis Duration : 30min/each axis	2
Static Electricity	150pF 330 ohm <u>+</u> 8kV, 10times air discharge <u>+</u> 5kV, 10times contact discharge	

Note 1 : Condensation of water is not permitted on the module.

Note 2 : The module should be inspected after 1 hour storage in normal conditions (15-35°C , 45-65%RH).

Definitions of life end point :

- Current drain should be smaller than the specific value.
- Function of the module should be maintained.
- Appearance and display quality should not have degraded noticeably.
- Contrast ratio should be greater than 50% of the initial value.

# 11 USE PRECAUTIONS

### 11-1 Handling precautions

- 1) The polarizing plate may break easily so be careful when handling it. Do not touch, press or rub it with a hard-material tool like tweezers.
- 2) Do not touch the polarizing plate surface with bare hands so as not to make it dirty. If the surface or other related part of the polarizing plate is dirty, soak a soft cotton cloth or chamois leather in benzine and wipe off with it. Do not use chemical liquids such as acetone, toluene and isopropyl alcohol. Failure to do so may bring chemical reaction phenomena and deteriorations.
- 3) Remove any spit or water immediately. If it is left for hours, the suffered part may deform or decolorize.
- 4) If the LCD element breaks and any LC stuff leaks, do not suck or lick it. Also if LC stuff is stuck on your skin or clothing, wash thoroughly with soap and water immediately.

### 11-2 Installing precautions

- 1) The PCB has many ICs that may be damaged easily by static electricity. To prevent breaking by static electricity from the human body and clothing, earth the human body properly using the high resistance and discharge static electricity during the operation. In this case, however, the resistance value should be approx.  $1M\Omega$  and the resistance should be placed near the human body rather than the ground surface. When the indoor space is dry, static electricity may occur easily so be careful. We recommend the indoor space should be kept with humidity of 60% or more. When a soldering iron or other similar tool is used for assembly, be sure to earth it.
- 2) When installing the module and ICs, do not bend or twist them. Failure to do so may crack LC element and cause circuit failure.
- 3) To protect LC element, especially polarizing plate, use a transparent protective plate (e.g., acrylic plate, glass etc) for the product case.
- 4) Do not use an adhesive like a both-side adhesive tape to make LCD surface (polarizing plate) and product case stick together. Failure to do so may cause the polarizing plate to peel off.

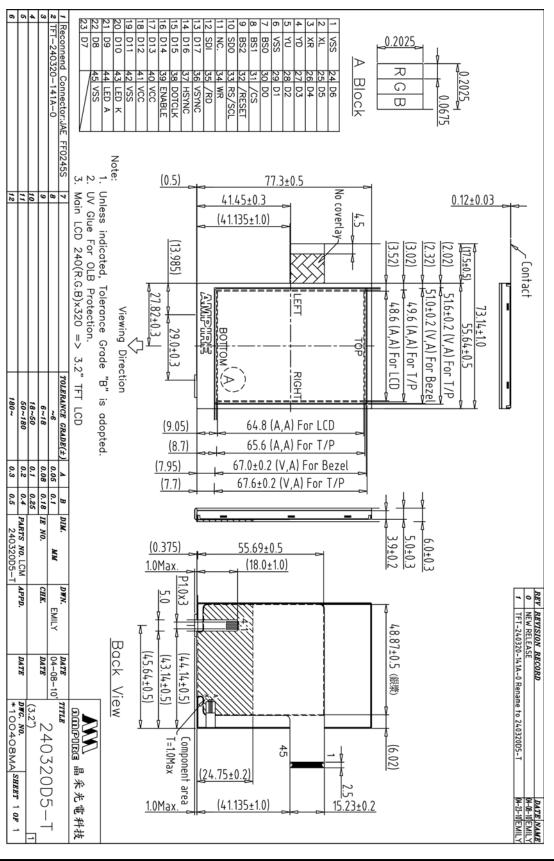

### 11-3 Storage precautions

- Avoid a high temperature and humidity area. Keep the temperature between 0°C and 35°C and also the humidity under 60%.
- 2) Choose the dark spaces where the product is not exposed to direct sunlight or fluorescent light.
- 3) Store the products as they are put in the boxes provided from us or in the same conditions as we recommend.
- 11-4 Operating precautions
- 1) Do not boost the applied drive voltage abnormally. Failure to do so may break ICs. When applying power voltage, check the electrical features beforehand and be careful. Always turn off the power to the LC module controller before removing or inserting the LC module input connector. If the input connector is removed or inserted while the power is turned on, the LC module internal circuit may break.
- 2) The display response may be late if the operating temperature is under the normal standard, and the display may be out of order if it is above the normal standard. But this is not a failure; this will be restored if it is within the normal standard.
- 3) The LCD contrast varies depending on the visual angle, ambient temperature, power voltage etc. Obtain the optimum contrast by adjusting the LC dive voltage.
- 4) When carrying out the test, do not take the module out of the low-temperature space suddenly. Failure to do so will cause the module condensing, leading to malfunctions.
- 5) Make certain that each signal noise level is within the standard (L level: 0.2Vdd or less and H level: 0.8Vdd or more) even if the module has functioned properly. If it is beyond the standard, the module may often malfunction. In addition, always connect the module when making noise level measurements.
- 6) The CMOS ICs are incorporated in the module and the pull-up and pull-down function is not adopted for the input so avoid putting the input signal open while the power is ON.
- 7) The characteristic of the semiconductor element changes when it is exposed to light emissions, therefore ICs on the LCD may malfunction if they receive light emissions. To prevent these malfunctions, design and assemble ICs so that

they are shielded from light emissions.

- 8) Crosstalk occurs because of characteristics of the LCD. In general, crosstalk occurs when the regularized display is maintained. Also, crosstalk is affected by the LC drive voltage. Design the contents of the display, considering crosstalk.
- 11-5 Other
- 1) Do not disassemble or take the LC module into pieces. The LC modules once disassembled or taken into pieces are not the guarantee articles.
- 2) The residual image may exist if the same display pattern is shown for hours. This residual image, however, disappears when another display pattern is shown or the drive is interrupted and left for a while. But this is not a problem on reliability.
- 3) AMIPRE will provide one years warrantee for all products and three months warrantee for all repairing products.
