1 Features

5.7 inch Amorphous-TFT-LCD (Thin Film Transistor Liquid Crystal Display) module. This module is composed of a 5.7" TFT-LCD panel, LCD controller, power driver circuit, touch panel and backlight unit.

1.1 TFT Panel Feature :

- (1) Construction: 5.7" a-Si color TFT-LCD, White LED Backlight, touch panel and PCB.
- (2) Resolution (pixel): 320(R.G.B) X240
- (3) Number of the Colors : 262K colors (R , G , B 6 bit digital each)
- (4) LCD type : Transmissive Color TFT LCD (normally White)
- (5) Interface: 33 pin pitch 0.5 FFC
- (6) Power Supply Voltage: Single power input. Built-in power supply circuit.
- (7) Viewing Direction:12 O'clock (The direction it's hard to be discolored):

1.2 LCD Controller Feature:

- (1) MCU interface 8/9/16/18 bit 80&68 series MCU interface.
- (2) Display RAM size : 640x240x3x6 bits. Ex:320x240 two frame buffer with 262K colors.
- (3) Arbitrary display memory start position selection.
- (4) MCU interface : 16 bit 80 MPU interface.
- (5) 8 bit / 16 bit interface support 65K (R5G6B5) /262K(R6G6B6) colors data format.
- (6) 9 bit / 18 bit interface support 262K(R6G6B6) colors data format only.

2 Physical specifications

Item	Specifications	Unit	
Display resolution	960 (W) x 240(H)	dot	
Active area	115.2 (W) x 86.4 (H)	mm	
Screen size	5.7(Diagonal)	inch	
Pixel size	120 (W) x 360 (H)	um	
Color configuration	R.G.B stripe		
Overall dimension	144.0(W)x104.6(H)x14.57(D)	mm	
Backlight unit	LED		

3 Default Setting & Option

Humidity	Note1		Note1		
Corrosive Gas	Not Acceptable		Not Acceptable		

Note1 : Ta ≤ 40°C : 85% RH max

Ta > 40°C : Absolute humidity must be lower than the humidity of 85%RH at 40°C

Note2 : Background color changes slightly depending on ambient temperature. This phenomenon is reversible.

Note3 : The response time will be slower at low temperature.

Note4 : Only operation is guaranteed at operating temperature. Contrast , response time, another display quality are evaluated at +25°C

Note5 : This is panel surface temperature, not ambient temperature.

Note6 : When LCM be operated over than 40°C , the life time of the LED back-light will be reduced.

LED forward current	I _{LED}	--	320	--	mA	Ta=25°C
	I _{LED}	--	210	--	mA	Ta=60°C

- The constant current source is needed for white LED back-light driving.

When LCM is operated over 60°C ambient temperature, the I_{LED} of the LED

back-light should be adjusted to 210mA max

()For reference only. These data should be update according the prototype.

Note 1: Ambient temperature= $25^\circ C$, and lamp current $I_{LED}=320mA$. To be measured in the dark room.

Note 2: To be measured on the center area of panel with a viewing cone of 1° by Topcon luminance meter BM-7, after 10 minutes operation.

Note 3. Definition of response time:

The output signals of photo detector are measured when the input signals are changed from "black" to "white"(falling time) and from "white" to "black" (rising time), respectively. The response time is defined as the time interval between the 10% and 90% of amplitudes. Refer to figure as below.

Note 4. Definition of contrast ratio:

Contrast ratio is calculated with the following formula.

$$\text{Contrast ratio(CR)} = \frac{\text{Photo detector output when LCD is at "White" state}}{\text{Photo detector Output when LCD is at "Black" state}}$$

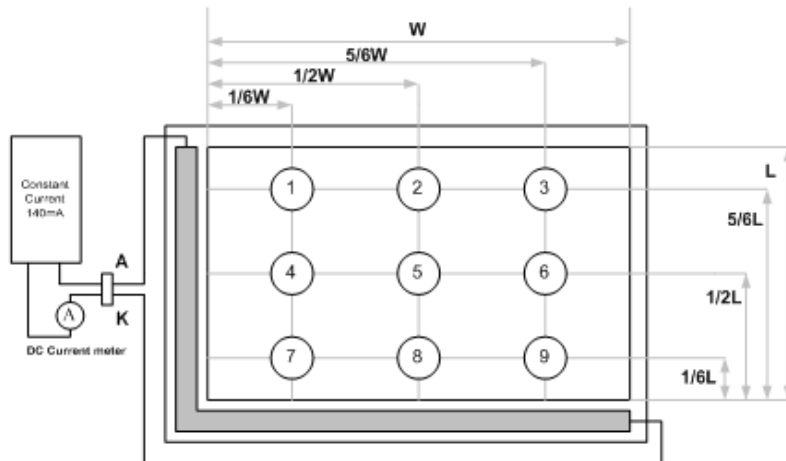

Note 5. Definition of viewing angle, Refer to figure as below.

Note 6. Measured at the center area of the panel when all the input terminals of LCD panel are electrically opened.

Note8: Measurement of the following 9 places on the display.

The Uniformity definition

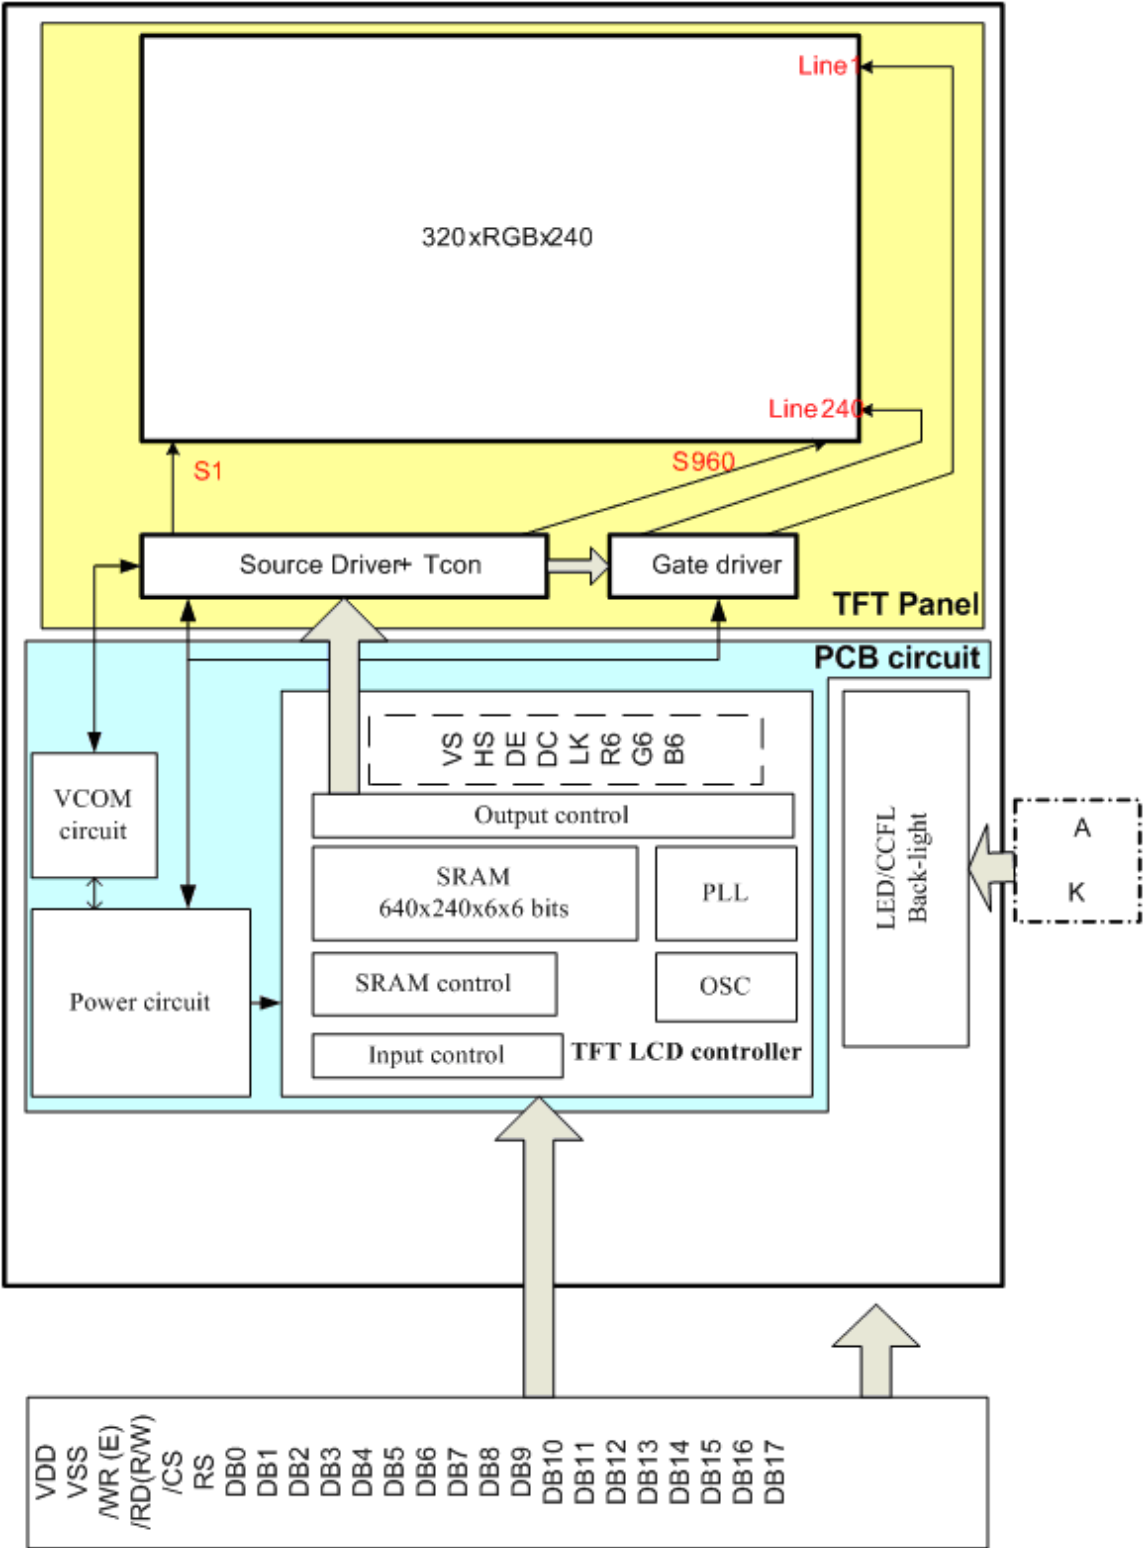

$$(\text{Min Brightness} / \text{Max Brightness}) \times 100\%$$

To simplify the address control of display RAM access, the window area address function allows for writing data only within a window area of display RAM specified by registers REG[00]~REG[07].

After writing data to the display RAM, the Address counter will be increased within setting window address-range which is specified by

MIN X address (REG[0] & REG[1])

MAX X address (REG[2] & REG[3])

MIN Y address (REG[4] & REG[5])

MAX Y address (REG[6] & REG[7])

Therefore, data can be written consecutively without thinking the data address.

The TFT LCD controller default value is for AM320240NS already. So we can start to write our data in a few steps:

Target: To write a 640x240 data to Display RAM and scroll the display data by change the Horizontal offset register.

9.2 Step 1: Make sure the interface Protocol.

9.3 Step 2: Define the Horizontal ram seize = 640 and Vertical ram size =240

640x240x18bit. REG[34]=0x02 , REG[35]=0x80 , REG[36]=0x00 ,

REG[37]=0xF0

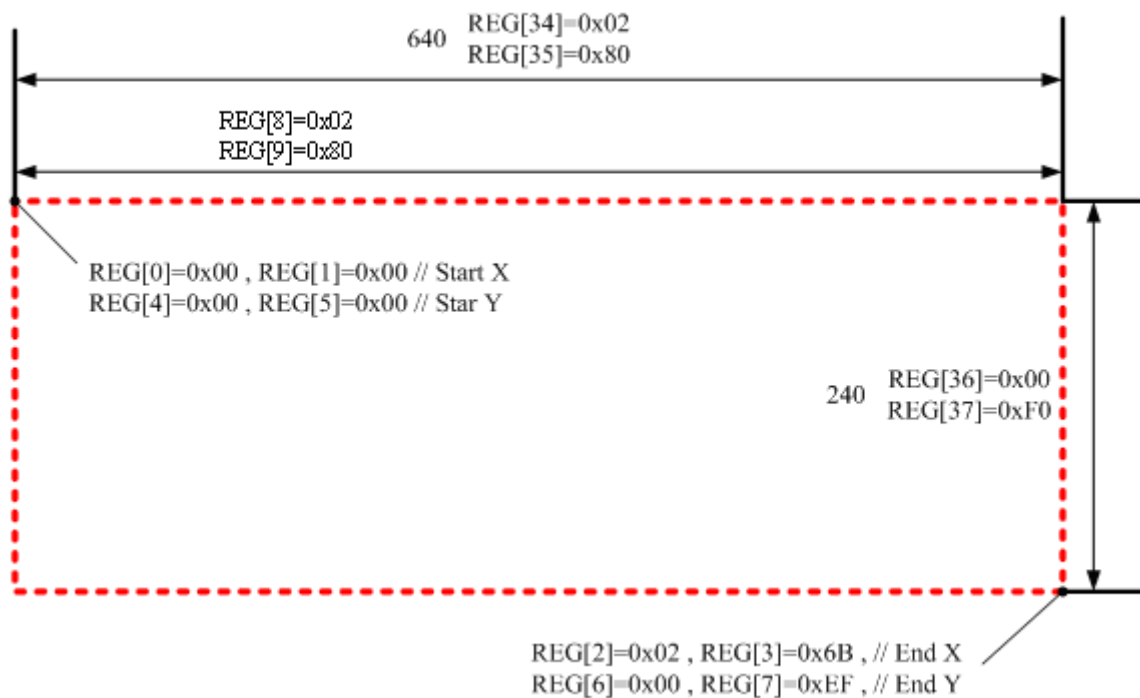

9.4 Step 3: Define the Panel X Size = 320

REG[8]=0x02 , REG[9]=0x80

9.5 Step4: Define the Write window. Start=(0,0) End=(619,239)

REG[0]=0x00 , REG[1]=0x00 , REG[2]=0x02 , REG[3]=0x6B , // Start X , End X

REG[4]=0x00 , REG[5]=0x00 , REG[6]=0x00 , REG[7]=0xEF , // Star Y ,End Y

9.6 Step5: Write the 640x240x18 bit data consecutively

9.7 Step6: The display will show the following image.

9.8 Step7: Change the Horizontal offset to switch or scroll the display data. Set the Horizontal offset = 160 , REG[30]=00 REG[31]=A0 . You will see

9.9 Step8: Change the Horizontal offset to switch or scroll the display data. Set the Horizontal offset = 320 , REG[30]=01 REG[31]=40 . You will see

10 QUALITY AND RELIABILITY

10.2 TEST CONDITIONS

Tests should be conducted under the following conditions :

Ambient temperature : $25 \pm 5^{\circ}\text{C}$

Humidity : $60 \pm 25\% \text{ RH}$.

10.3 SAMPLING PLAN

Sampling method shall be in accordance with MIL-STD-105E , level II, normal single sampling plan .

10.4 ACCEPTABLE QUALITY LEVEL

A major defect is defined as one that could cause failure to or materially reduce the usability of the unit for its intended purpose. A minor defect is one that does not materially reduce the usability of the unit for its intended purpose or is an infringement from established standards and has no significant bearing on its effective use or operation.

10.5 APPEARANCE

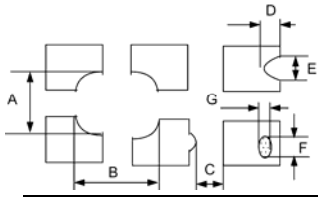

An appearance test should be conducted by human sight at approximately 30 cm distance from the LCD module under fluorescent light. The inspection area of LCD panel shall be within the range of following limits.

 Zone A (Active Area)

 Zone B (Viewing Area)

12 USE PRECAUTIONS

12.2 Handling precautions

- 1) The polarizing plate may break easily so be careful when handling it. Do not touch, press or rub it with a hard-material tool like tweezers.
- 2) Do not touch the polarizing plate surface with bare hands so as not to make it dirty. If the surface or other related part of the polarizing plate is dirty, soak a soft cotton cloth or chamois leather in benzene and wipe off with it. Do not use chemical liquids such as acetone, toluene and isopropyl alcohol. Failure to do so may bring chemical reaction phenomena and deteriorations.
- 3) Remove any spit or water immediately. If it is left for hours, the suffered part may deform or decolorize.
- 4) If the LCD element breaks and any LC stuff leaks, do not suck or lick it. Also if LC stuff is stuck on your skin or clothing, wash thoroughly with soap and water immediately.

12.3 Installing precautions

- 1) The PCB has many ICs that may be damaged easily by static electricity. To prevent breaking by static electricity from the human body and clothing, earth the human body properly using the high resistance and discharge static electricity during the operation. In this case, however, the resistance value should be approx. $1M\Omega$ and the resistance should be placed near the human body rather than the ground surface. When the indoor space is dry, static electricity may occur easily so be careful. We recommend the indoor space should be kept with humidity of 60% or more. When a soldering iron or other similar tool is used for assembly, be sure to earth it.
- 2) When installing the module and ICs, do not bend or twist them. Failure to do so may crack LC element and cause circuit failure.
- 3) To protect LC element, especially polarizing plate, use a transparent protective plate (e.g., acrylic plate, glass etc) for the product case.
- 4) Do not use an adhesive like a both-side adhesive tape to make LCD surface (polarizing plate) and product case stick together. Failure to do so may cause the polarizing plate to peel off.

12.4 Storage precautions

- 1) Avoid a high temperature and humidity area. Keep the temperature between 0°C and 35°C and also the humidity under 60%.
- 2) Choose the dark spaces where the product is not exposed to direct sunlight or

fluorescent light.

- 3) Store the products as they are put in the boxes provided from us or in the same conditions as we recommend.

12.5 Operating precautions

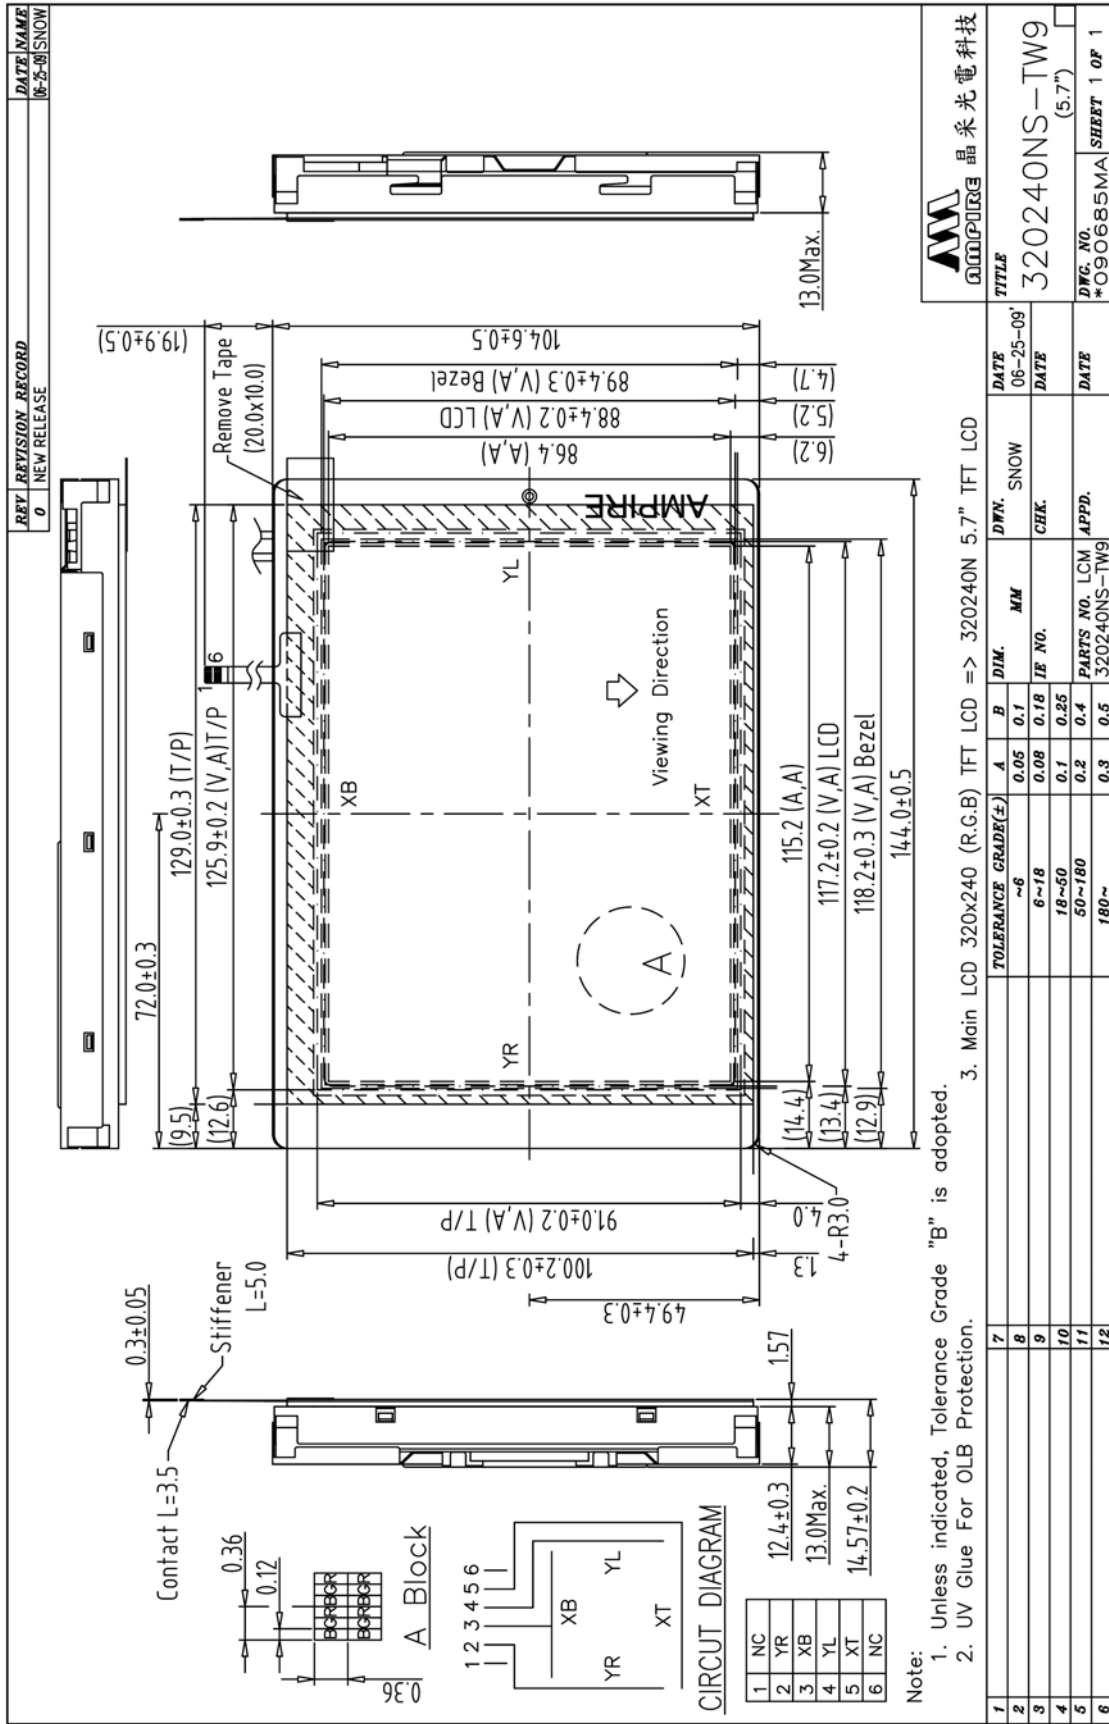

- 1) Do not boost the applied drive voltage abnormally. Failure to do so may break ICs. When applying power voltage, check the electrical features beforehand and be careful. Always turn off the power to the LC module controller before removing or inserting the LC module input connector. If the input connector is removed or inserted while the power is turned on, the LC module internal circuit may break.
- 2) The display response may be late if the operating temperature is under the normal standard, and the display may be out of order if it is above the normal standard. But this is not a failure; this will be restored if it is within the normal standard.
- 3) The LCD contrast varies depending on the visual angle, ambient temperature, power voltage etc. Obtain the optimum contrast by adjusting the LC drive voltage.
- 4) When carrying out the test, do not take the module out of the low-temperature space suddenly. Failure to do so will cause the module condensing, leading to malfunctions.
- 5) Make certain that each signal noise level is within the standard (L level: $0.2V_{dd}$ or less and H level: $0.8V_{dd}$ or more) even if the module has functioned properly. If it is beyond the standard, the module may often malfunction. In addition, always connect the module when making noise level measurements.
- 6) The CMOS ICs are incorporated in the module and the pull-up and pull-down function is not adopted for the input so avoid putting the input signal open while the power is ON.
- 7) The characteristic of the semiconductor element changes when it is exposed to light emissions, therefore ICs on the LCD may malfunction if they receive light emissions. To prevent these malfunctions, design and assemble ICs so that they are shielded from light emissions.
- 8) Crosstalk occurs because of characteristics of the LCD. In general, crosstalk occurs when the regularized display is maintained. Also, crosstalk is affected by the LC drive voltage. Design the contents of the display, considering crosstalk.

12.6 Other

- 1) Do not disassemble or take the LC module into pieces. The LC modules once disassembled or taken into pieces are not the guarantee articles.
- 2) The residual image may exist if the same display pattern is shown for hours. This residual image, however, disappears when another display pattern is shown or the drive is interrupted and left for a while. But this is not a problem on reliability.
- 3) AMIPRE will provide one year warrantee for all products and three months warrantee for all repairing products.
