RECORD OF REVISION

Revision Date	Page	Contents	Editor
2012/6/14		New Release	Rober
2012/06/22	4	Corrected the testing condition of Luminance	Emil
2012/8/9	4	Corrected the testing condition of Luminance	Rober
	6	Corrected the Back-light forward	

1. FEATURES

- (1) Construction : a-Si TFT-LCD with driving system, White LED Backlight
- (2) LCD type : Transmissive , Normally White
- (3) Number of the Colors : 16.7M colors (R,G,B 8bit digital each)
- (4) RGB Interface 45 pin.
- (5) LCD Power Supply Voltage : 3.3V single power input, built-in power supply circuit.
- (6) ROHS compliant.

2. PHYSICAL SPECIFICATIONS

Item	Specifications	unit
Display size (diagonal)	5.0	inch
Resolution	800 (W) x RGB x 480 (H)	dot
Display area	110.6 (W) x67.4 (H)	mm
Pixel pitch	0.135 (W) x 0.135 (H)	mm
Overall dimension	119.0(W) x 135.0(H) x4.4(D)	mm
Color configuration	R.G.B Vertical stripe	
Surface treatment	Antiglare(T.B.D)	
View Direction (Gray Inversion)	6 o'clock	

3. ABSOLUTE MAXIMUM RATINGS

Item	Symbol	Min.	Max.	Unit	Note
Power Supply for logic	VCC	-0.5	5.0	V	
Input Signal Voltage	VI	-0.5	VCC + 0.5	V	(1)
Operating Temperature	Тор	-20	70	°C	(2)
Storage Temperature	Tstg	-30	80	°C	(2)

Note 1: Hsync, Vsync, DEN, DCLK, R0~R7, G0~G7, B0~B7

Note 2: Background color changes slightly depending on ambient temperature. This phenomenon is reversible.

Item		Symbol	Condition	Min.	Тур.	Max.	Unit	Note	
	Front	θf			70				
Viewing Angle	Back	θb	CD > 10		50			(4)(0)(0)	
	Left	θΙ	CR≧10		70		deg.	(1)(2)(3)	
	Right	θr			70				
Contrast ratio		CR	Θ=Φ=0°	150	250			(1)(3)	
Deenenee Time	Tr	Θ=Φ=0°		15	30	ms	(1)(4)		
Response Time	e	T _f	Θ=Φ=0		35	50	ms	(1)(4)	
	Red	Rx		0.585	0.615	0.645		(1)	
	Reu	Ry		0.314	0.344	0.374	- - 		
	Croon	Gx		0.277	0.307	0.337			
Color	Green	Gy	Θ=Φ=0°	0.532	0.562	0.592			
chromaticity	Blue	Bx	Θ=Φ=0	0.103	0.133	0.163			
	Diue	Ву		0.120	0.150	0.180			
		Wx		0.279	0.309	0.339			
	White	Wy		0.320	0.350	0.380			
Luminance (ILED=200mA)		L	Θ=Φ=0°	700	800		cd/m²	(1)(5)	
Luminance Uni	iformity	ΔL	Θ=Φ=0°	70	-	-	%	(1)(5)(6)	

4. OPTICAL CHARACTERISTICS

Note 1: Ta=25°C. To be measured on the center area of panel after 10 minutes operation.

Note 2: Definition of Viewing Angle

Note 3: Definition of contrast ratio:

Contrast ratio is calculated with the following formula.

```
Contrast ratio(CR)= 

Photo detector output when LCD is at "White" state

Photo detector Output when LCD is at "Black" state
```

Note 4: Definition of response time:

The output signals of photo detector are measured when the input signals are changed from "black" to "white"(falling time) and from "white" to "black" (rising time) respectively. The response time is defined as the time interval between the 10% and 90% of amplitudes. Refer to figure as below.

Note 5 : Luminance is measured at point 5 of the display.

Note 6 : Definition of Luminance Uniformity

 ΔL = [L(min.) of 9 points / L(max.) of 9 points] X 100%

5. ELECTRICAL CHARACTERISTICS

5.1 LCD driving

Item		Symbol	Min.	Тур.	Max.	Unit	Note
Power supply voltage		VCC	3.0	3.3	3.6	V	
Input voltage for	H Level	V _{IH}	0.7 VCC		VCC	V	(1)
logic	L Level	VIL	0		0.3 VCC	V	(1)
Power Supply current		IDD		170	220	mA	(2)
LED life tim			30,000		Hrs	(3)	

Note 1: Hsync, Vsync, DEN, DCLK, R0~R7, G0~G7, B0~B7

Note 2: fV =60Hz , Ta=25°C , Display pattern : All Black

*:Will be reference only

Note 3:Brightness to be decreased to 50% of the initial value.

5.2 Electrical characteristic of LED Back-light

Paramenter	Symbol	Min.	Тур.	Max.	Unit	Condiction				
LED voltage	V _{ak}		9.9	10.8	V	I _{LED} =200mA,Ta=25°C				
LED forward current	I _{LED}		200		mA	Ta=25°C				

■ The constant current source is needed for white LED back-light driving.

When LCM is operated over 60°C ambient temperature, the ILED back-light

should be adjusted to 150mA max

6. BLOCK DIAGRAM

7. INTERFACE PIN ASSIGNMENT

Pin No	Symbol	Function
1	GND	Power Ground
2	GND	Power Ground
3	VCC	3.3V Power Supply for LCD
4	VCC	3.3V Power Supply for LCD
5	R0	Red Data 0 (LSB)
6	R1	Red Data 1
7	R2	Red Data 2
8	R3	Red Data 3
9	R4	Red Data 4
10	R5	Red Data 5
11	R6	Red Data 6
12	R7	Red Data 7 (MSB)
13	G0	Green Data 0 (LSB)
14	G1	Green Data 1
15	G2	Green Data 2
16	G3	Green Data 3
17	G4	Green Data 4
18	G5	Green Data 5
19	G6	Green Data 6
20	G7	Green Data 7 (MSB)
21	B 0	Blue Data 0 (LSB)
22	B1	Blue Data 1
23	B2	Blue Data 2
24	B3	Blue Data 3
25	B4	Blue Data 4
26	B5	Blue Data 5
27	B6	Blue Data 6
28	B7	Blue Data 7(MSB)
29	GND	Power Ground
30	DCLK	Clock Signals
31	DISP	Display on/off (High: on, Low :off)
32	HSYNC	Horizontal SYNC signal.
33	VSYNC	Vertical SYNC signal
34	DENA	Data Enable signal (to settle the viewing area)
35	NC	No Connect
36	NC	No Connect
37	NC	No Connect
38	NC	No Connect
39	SC	Scan direction control (Low= Reverse, High= Normal)
40	GND	Power Ground
41	GND	Power Ground

42	LED C1	LED cathode 1
43	LED A1	LED anode 1
44	LED C2	LED cathode 2
45	LED A2	LED anode 2

Remark:

- 1. GND Pin must ground contact, can not be floating.
- 2. SC are controlled function

(L/R)	(U/D)	Function
1	0	Normally display
0	1	Left and Right opposite, Up and Down opposite

8. INTERFACE TIMING

Signal	Parameter	Symbol	Min.	Тур.	Max.	Unit.
DCLK	Frequency	FCPH	27.32	30.06	33.41	MHz
	DCLK period	ТСРН	29.93	33.26	36.59	ns
	Pulse duty	Тсwн	40	50	60	%
RGB			6	-	-	ns
DATA	Data hold time	TDHD	6	-	-	ns
HSYNC	SYNC HSYNC period		950	1056	1600	ТСРН
	HSYNC pulse width	Тwн	1	128	THS-2	ТСРН
	HSYNC Active time	ТНА	-	800	-	ТСРН
VSYNC	VSYNC period	Τv	490	525	625	Тн
	VSYNC pulse width	Twv	1	2	T∨s	Тн
	VSYNC Actuve time	ΤνΑ		480		Тн

Remark : If DEN is fixed to low, the SYNC mode is used. Otherwise DE mode is used. When SYNC mode is used, 1st data start from 68th CLK after HSYNC falling

10.Reliability Test

Test Item	Test Conditions	Note
High Temperature Operation	70±3°C, t=240 hrs	
Low Temperature Operation	-20±3°C, t=240 hrs	
High Temperature Storage	80±3°C, t=240 hrs	1,2
Low Temperature Storage	-30±3°C, t=240 hrs	1,2
Storage at High Temperature and Humidity	60°C, 90% RH , 240 hrs	1,2
Thermal Shock Test	-20°C (30min) ~ 70°C (30min) 100 cycles	1,2
Vibration Test (Packing)	Sweep frequency : 10 ~ 55 ~ 10 Hz/1min Amplitude : 0.75mm Test direction : X.Y.Z/3 axis Duration : 30min/each axis	2

Note 1 : Condensation of water is not permitted on the module.

Note 2 : The module should be inspected after 1 hour storage in normal conditions (15-35°C , 45-65%RH).

11.USE PRECAUTIONS

11.1 Handling precautions

- 1) The polarizing plate may break easily so be careful when handling it. Do not touch, press or rub it with a hard-material tool like tweezers.
- 2) Do not touch the polarizing plate surface with bare hands so as not to make it dirty. If the surface or other related part of the polarizing plate is dirty, soak a soft cotton cloth or chamois leather in benzene and wipe off with it. Do not use chemical liquids such as acetone, toluene and isopropyl alcohol. Failure to do so may bring chemical reaction phenomena and deteriorations.
- 3) Remove any spit or water immediately. If it is left for hours, the suffered part may deform or decolorize.
- 4) If the LCD element breaks and any LC stuff leaks, do not suck or lick it. Also if LC stuff is stuck on your skin or clothing, wash thoroughly with soap and water immediately.

11.2 Installing precautions

- 1) The PCB has many ICs that may be damaged easily by static electricity. To prevent breaking by static electricity from the human body and clothing, earth the human body properly using the high resistance and discharge static electricity during the operation. In this case, however, the resistance value should be approx. $1M\Omega$ and the resistance should be placed near the human body rather than the ground surface. When the indoor space is dry, static electricity may occur easily so be careful. We recommend the indoor space should be kept with humidity of 60% or more. When a soldering iron or other similar tool is used for assembly, be sure to earth it.
- 2) When installing the module and ICs, do not bend or twist them. Failure to do so may crack LC element and cause circuit failure.
- 3) To protect LC element, especially polarizing plate, use a transparent protective plate (e.g., acrylic plate, glass etc) for the product case.
- 4) Do not use an adhesive like a both-side adhesive tape to make LCD surface (polarizing plate) and product case stick together. Failure to do so may cause the polarizing plate to peel off.

11.3Storage precautions

- Avoid a high temperature and humidity area. Keep the temperature between 0°C and 35°C and also the humidity under 60%.
- 2) Choose the dark spaces where the product is not exposed to direct sunlight or fluorescent light.
- 3) Store the products as they are put in the boxes provided from us or in the same conditions as we recommend.

11.4 Operating precautions

- 1) Do not boost the applied drive voltage abnormally. Failure to do so may break ICs. When applying power voltage, check the electrical features beforehand and be careful. Always turn off the power to the LC module controller before removing or inserting the LC module input connector. If the input connector is removed or inserted while the power is turned on, the LC module internal circuit may break.
- 2) The display response may be late if the operating temperature is under the normal standard, and the display may be out of order if it is above the normal standard. But this is not a failure; this will be restored if it is within the normal standard.
- 3) The LCD contrast varies depending on the visual angle, ambient temperature, power voltage etc. Obtain the optimum contrast by adjusting the LC dive voltage.
- 4) When carrying out the test, do not take the module out of the low-temperature space suddenly. Failure to do so will cause the module condensing, leading to malfunctions.
- 5) Make certain that each signal noise level is within the standard (L level: 0.2VCC or less and H level: 0.8VCC or more) even if the module has functioned properly. If it is beyond the standard, the module may often malfunction. In addition, always connect the module when making noise level measurements.
- 6) The CMOS ICs are incorporated in the module and the pull-up and pull-down function is not adopted for the input so avoid putting the input signal open while the power is ON.
- The characteristic of the semiconductor element changes when it is exposed to light emissions, therefore ICs on the LCD may malfunction if they receive light emissions. To prevent these malfunctions, design and assemble ICs so that they are shielded from light emissions.
- 8) Crosstalk occurs because of characteristics of the LCD. In general, crosstalk occurs when the regularized display is maintained. Also, crosstalk is affected by the LC drive voltage. Design the contents of the display, considering crosstalk.

11.50ther

- 1) Do not disassemble or take the LC module into pieces. The LC modules once disassembled or taken into pieces are not the guarantee articles.
- 2) The residual image may exist if the same display pattern is shown for hours. This residual image, however, disappears when another display pattern is shown or the drive is interrupted and left for a while. But this is not a problem on reliability.
- 3) AMIPRE will provide one year warranty for all products and three months warrantee for all repairing products.

12. OUTLINE DIMENSION

Date : 2012/8/9

Date : 2012/8/9
