Junction Temperature Calculation: T _J = T _A + (P _D x θ _{JA}), Po = D _F x (T _J - T _A) The θ _{JA} numbers are guidelines for the thermal performance of the device/PC-board system. All of the above assume no ambient airflow. 2. θ _{JT} : Thermal Resistance-Junction to Ambient, T _C : case(Tab) temperature, T _J = T _C + (P _D x θ _{JT}) For SK package, θ _{JT} = 15.0°C/W. APPLICATION INFORMATION

Adjustable Regulator

$$V_{OUT} = 1.25V \left(1 + \frac{R2}{R1} \right)$$

5V Regulator with Shutdown

Fixed Voltage Regulator

Application Note:

Maximum Power Calculation:

$$P_{D(MAX)} = \frac{T_{J(MAX)} - T_{A(MAX)}}{\theta_{JA}}$$

$T_J(^{\circ}C)$: Maximum recommended junction temperature

$T_A(^{\circ}C)$: Ambient temperature of the application

$\theta_{JA}(^{\circ}C/W)$: Junction-to-junction temperature thermal resistance of the package, and other heat dissipating materials.

The maximum power dissipation of a single-output regulator :

$$P_{D(MAX)} = [(V_{IN(MAX)} - V_{OUT(NOM)}) \times I_{OUT(NOM)} + V_{IN(MAX)} \times I_Q]$$

Where: $V_{OUT(NOM)}$ = the nominal output voltage

$I_{OUT(NOM)}$ = the nominal output current, and

I_Q = the quiescent current the regulator consumes at $I_{OUT(MAX)}$

$V_{IN(MAX)}$ = the maximum input voltage

Then $\theta_{JA} = (150^{\circ}C - T_A) / P_D$

Thermal consideration:

When power consumption is over about 404 mW (for SOT-223 package, 687mW for TO-252 package, at $T_A=70^{\circ}C$), additional heat sink is required to control the junction temperature below $125^{\circ}C$.

The junction temperature is: $T_J = P_D (\theta_{JT} + \theta_{CS} + \theta_{SA}) + T_A$

$P_D \equiv$ Dissipated power.

$\theta_{JT} \equiv$ Thermal resistance from the junction to the mounting tab of the package.

$\theta_{CS} \equiv$ Thermal resistance through the interface between the IC and the surface on which it is mounted.
 (typically, $\theta_{CS} < 1.0^{\circ}C/W$)

$\theta_{SA} \equiv$ Thermal resistance from the mounting surface to ambient (thermal resistance of the heat sink).

If PC Board copper is going to be used as a heat sink, below table can be used to determine the appropriate size of copper foil required. For multi-layered PCB, these layers can also be used as a heat sink. They can be connected with several through hole vias.

PCB $\theta_{SA} (^{\circ}C/W)$	59	45	38	33	27	24	21
PCB heat sink size (mm ²)	500	1000	1500	2000	3000	4000	5000
