 V_F : Forward Voltage drop of the output rectifier V_{sat} : Saturation voltage of the output switch.**The following power supply characteristics must be chosen:** V_{in} - Nominal input voltage V_{out} - Desired output voltage, $?V_{out} = 1.25(1 + R1/R2)$ I_{out} - Desired output current. f_{min} - Minimum desired output switching frequency at the selected values of V_{in} and I_O $V_{ripple(pp)}$ - Desired peak-to-peak output ripple voltage.**Application concerns:**To get the best regulation performance, Low ESR capacitors at V_{out} are suggested.
