

AN2526NFH

Automotive LCD TV signal processor IC

■ Overview

The AN2526NFH is a video signal processing IC with an LCD's 5 V-source driving power supply for TFT color LCD (normally white type), and it supports NTSC and PAL systems. The main circuitry of this IC includes video-signal processing circuit, color signal processing circuit, interface circuit, synchronizing circuit and many color quality adjusting circuits. This IC converts the composite video signal or separated Y/C signal or RGB signals into RGB signals available for TFT color LCD.

■ Features

- Supply voltage: 5 V/7.5 V
- Built-in LCD's 5 V-source driving power supply
- Low consumption power (typ. 260 mW)
- Supporting NTSC and PAL
- Supporting composite, component and color differential signal input
- Video signal analog RGB (2 systems)
One is for OSD (analog/digital).
- Each mode setting is possible with 3-wire or I²C Bus control.
- Electronic volume (D/A converter) built in
- Contrast/Brightness/ γ correction circuit built in
- Horizontal and vertical display position adjustment are possible by serial control.
- Package: QFP-64HP10L (10 × 10 × 1.95 mm)
- Difference from the AN2526FH

Compared to the AN2526FH, the sync. system gain is increased in no signal input. This may cause the picture on the screen to be swaying horizontally. So we cannot recommend this IC to be used in the set with no-signal input mode.

■ Applications

- 4 inches to 7 inches middle size TFT LCD equipment of normally white, of such as in-car TV, an LCD monitor for car navigation system.

Note) The package of this product will be changed to lead-free type (QFP064-P-1010A). See the new package dimensions section later of this datasheet.

Application Circuit Examples

1. Composite signal input

Application Circuit Examples (continued)

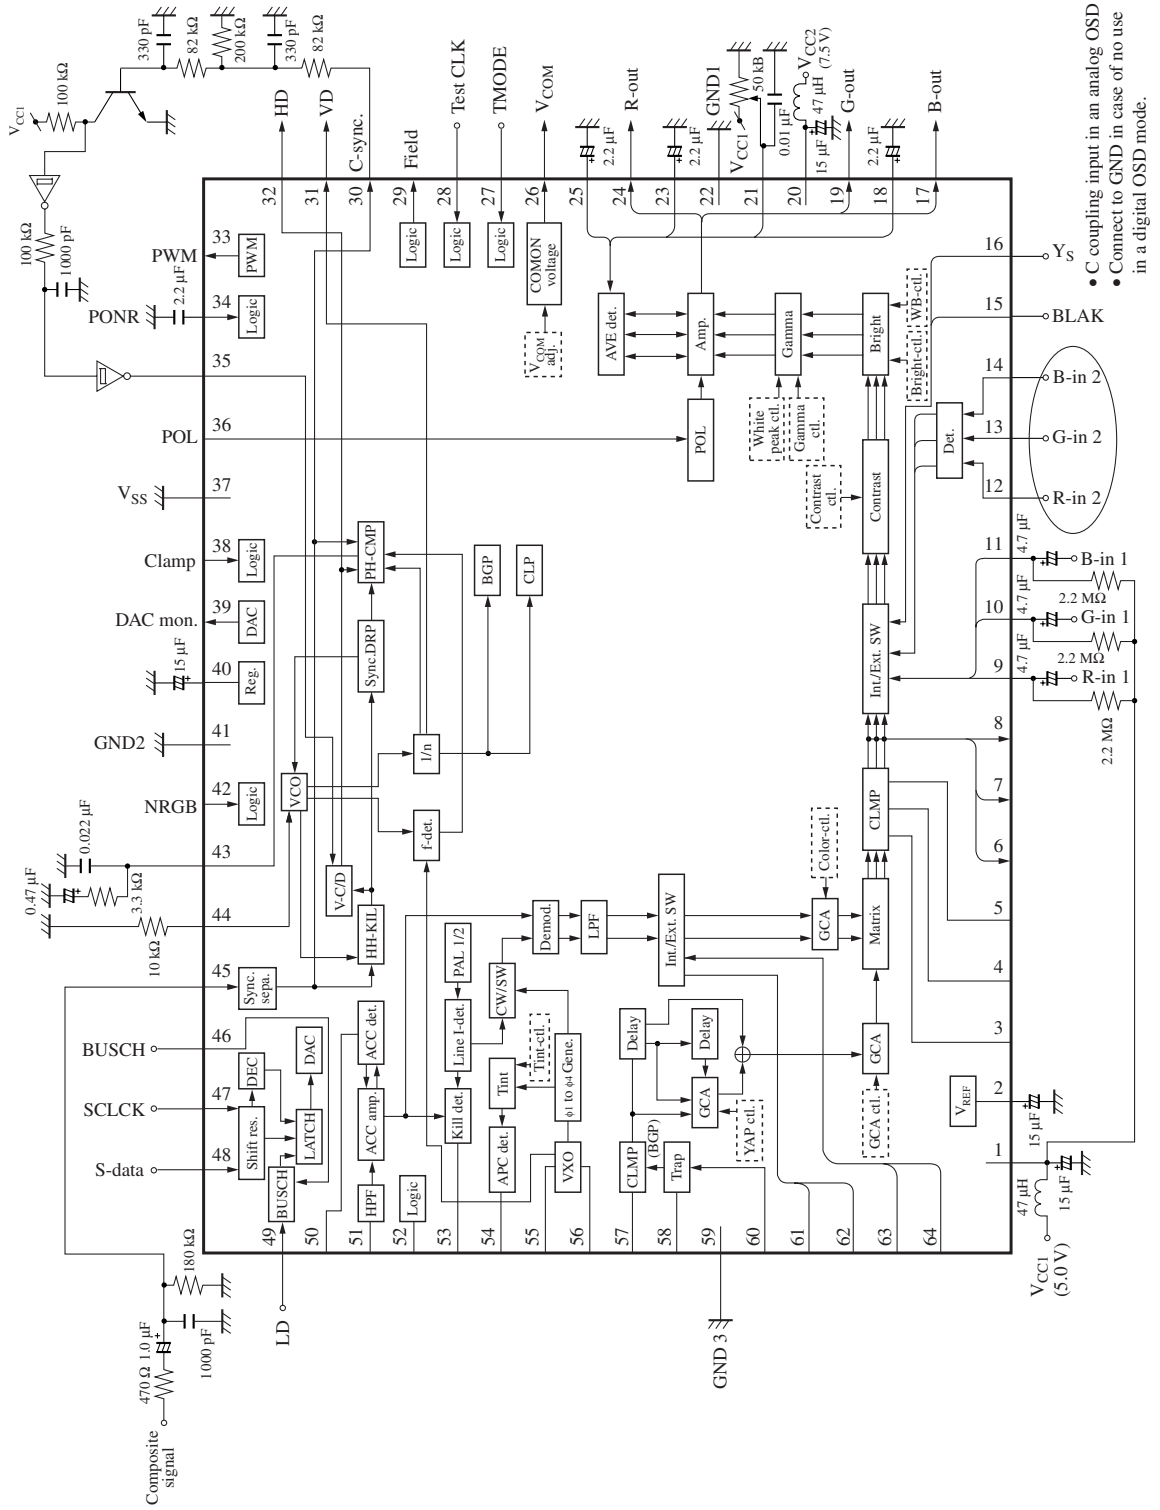

2. Component signal input

- C coupling input in an analog OSD mode.
- Connect to GND in case of no use in a digital OSD mode.

Application Circuit Examples (continued)

3. Analog RGB signal input

■ Pin Descriptions

Pin No.	Description	Pin No.	Description
1	V _{CC1} (5.0 V)	33	PWM output pin
2	Reference voltage pin	34	Power-on reset detection pin
3	R-ch. clamp detection pin	35	Vertical synchronous signal input pin
4	G-ch. clamp detection pin	36	1H reverse signal input pin
5	B-ch. clamp detection pin	37	Clock-system GND (V _{SS})
6	R-ch. decoder output pin	38	Clamp pulse input pin
7	G-ch. decoder output pin	39	DAC monitor pin
8	B-ch. decoder output pin	40	Clock-system power supply (3.0 V)
9	R-ch. analog signal input pin	41	GND 2
10	G-ch. analog signal input pin	42	Analog imposing control signal input pin
11	B-ch. analog signal input pin	43	AFC loop filter connecting pin
12	R-ch. analog/character signal input pin	44	VCO frequency adjustment pin
13	G-ch. analog/character signal input pin	45	Synchronous signal input pin
14	B-ch. analog/character signal input pin	46	Serial/I ² C Bus switching pin
15	Black level indication control signal input pin	47	Serial data shift clock input pin
16	Character picking up pulse input pin	48	Serial data input pin
17	B-ch. output pin	49	Serial data write pulse input pin
18	B-ch. output DC feedback detection pin	50	ACC detection pin
19	G-ch. output pin	51	ACC input pin
20	V _{CC2} (7.5 V)	52	Horizontal clock detection pin
21	Drive output reference potential input pin	53	Chroma killer detection pin
22	GND 1	54	APC detection pin
23	G-ch. output DC feedback detection pin	55	VXO input pin
24	R-ch. output pin	56	VXO output pin
25	R-ch. output DC feedback detection pin	57	Y-system clamp detection pin
26	Common reverse signal output pin	58	Chroma trap filter connection pin
27	Testing pulse input pin	59	GND 3
28	Testing clock input pin	60	Luminance signal input pin
29	Field identification signal output pin	61	R-Y output pin
30	Composite synchronous signal output pin	62	B-Y output pin
31	Vertical synchronous signal output pin	63	R-Y input pin
32	Horizontal synchronous signal output pin	64	B-Y input pin

■ Absolute Maximum Ratings

Parameter	Symbol	Rating	Unit
Supply voltage	V _{CC1}	5.5	V
	V _{CC2}	8.5	
Supply current	I _{CC}	—	mA
Power dissipation *2	P _D	423	mW
Operating ambient temperature *1	T _{opr}	-30 to +85	°C
Storage temperature *1	T _{stg}	-55 to +150	°C

Note) *1: Except for the operating ambient temperature and storage temperature, all ratings are for T_a = 25°C.

*2: The power dissipation shown is the value in free air for T_{opr} = 85°C.

■ Recommended Operating Range

Parameter	Symbol	Range	Unit
Supply voltage	V _{CC1}	4.7 to 5.3	V
	V _{CC2}	7.0 to 8.0	

■ Electrical Characteristics at T_a = 25°C

Parameter	Symbol	Conditions	Min	Typ	Max	Unit
DC						
V _{CC1} -system current consumption	I _{TOTAL1}	—	29	—	43	mA
V _{CC2} -system current consumption	I _{TOTAL2}	—	6.0	—	14.0	mA
Pin 2 voltage	V ₂	—	1.8	—	2.2	V
Pin 40 voltage	V ₄₀	—	2.7	—	3.3	V
Chroma system						
R-Y standard gain	G _{RY}	SG3 (Y _y = -17 dB, Y _s = 0 V[p-p], NTSC), ch.1 = "C0"	9.5	—	14.5	dB
R-Y/G-Y relative gain	G _{RYGY}	SG3 (Y _y = -17 dB, Y _s = 0 V[p-p], NTSC), ch.1 = "C0"	-8.0	—	-4.0	dB
B-Y standard gain	G _{BY}	SG3 (Y _y = -17 dB, Y _s = 0 V[p-p], NTSC), ch.1 = "C0"	9.5	—	14.5	dB
B-Y/G-Y relative gain	G _{BYGY}	SG3 (Y _y = -17 dB, Y _s = 0 V[p-p], NTSC), ch.1 = "C0"	-20.5	—	-12.5	dB
High-level APC pull-in	AP _H	SG5 (4.43 MHz + 520 Hz, PAL)	500	—	540	Hz
Low-level APC pull-in	AP _L	SG5 (4.43 MHz - 520 Hz, PAL)	-540	—	-500	Hz
ACC output characteristic 1	G _{ACC1}	SG5 (0 dB, 6 dB, NTSC), ch.1 = "80"	-1.0	—	1.0	dB
ACC output characteristic 2	G _{ACC2}	SG5 (0 dB, 6 dB, NTSC), ch.1 = "80"	-1.0	—	1.0	dB
Chroma killer characteristic 1	V _{KILL1}	SG5 (-30 dB, NTSC) ch.1 = "80", ch.2 = "80", ch.5 = "FF"	400	—	—	mV[p-p]
Chroma killer characteristic 2	V _{KILL2}	SG5 (-50 dB, NTSC) ch.1 = "80", ch.2 = "80", ch.5 = "FF"	—	—	600	mV[p-p]

■ Electrical Characteristics at $T_a = 25^\circ\text{C}$ (continued)

Parameter	Symbol	Conditions	Min	Typ	Max	Unit

■ Usage Notes

- You are required to study adequately before using it in PAL.
- If the duty of PWM output is set to other than 0% to 100%, the jitter of the HD out put increases. So, confirm the horizontal jitter amount on the screen of the set you introduce the PWM function into.

■ Technical Data

Serial data control

In addition to its serial control by the conventional three-wire method, the AN2526NFH can be controlled by the I²C Bus. The transmission method is selected by the voltage to be applied to Pin 46.

Three-wire control mode: Pin 46 = Low-level (connect to GND)

I²C Bus mode: Pin 46 = High-level (Pin 41: connect to V_{DD})

It is recommended that the serial data is transferred during a vertical blanking period.

1. Three-wire control mode

A serial data is of three-line system transmitting three kinds of signals of data, shift clock and load pulse independently. The data to be transmitted is made up by 12 bits in total of address (4 bits) and data (8 bits). The DAC is composed of four blocks of serial-parallel conversion, address decoder, data latch and ladder resistors, enabling to control 16 channels in total. Further, the mode setting such as the input signal switching is done by a serial data to reduce the pin count.

0	1	1	1	14	Gamma-2 Knee level	8
1	1	1	1	15	RGB contrast	7

A variety of mode-settings for the channel for 8 bits or less is made by using the data stored in the data block.

The contents of each mode setting are shown next.

■ Technical Data (continued)

1. Three-wire control mode (continued)

4) Mode setup channel bit-map.

- ch.0: Vertical sync. output position adjustment

D11	D10	D9	D8	D7 EXCHF	D6 FIXHD	D5 BOSC	D4 to D3		D2	D1	D0
							Hor. PLL start position adjustment				
0	0	0	0	—	—	0	Automatic switching				
				—	—	1	263H/313H fixed (NTSC/PAL)				
				—	0	HD/VD output timing is serially variable					
				—	1	HD/VD output timing fixed					
				0	Odd number field: Advanced phase						
				1	Even number field: Advanced phase						

- Vertical sync. output timing adjusting range

The pin 31 timing is synchronous with the pin 35 input timing.
The above timing chart is just for your reference.

■ Technical Data (continued)

1. Three-wire control mode (continued)

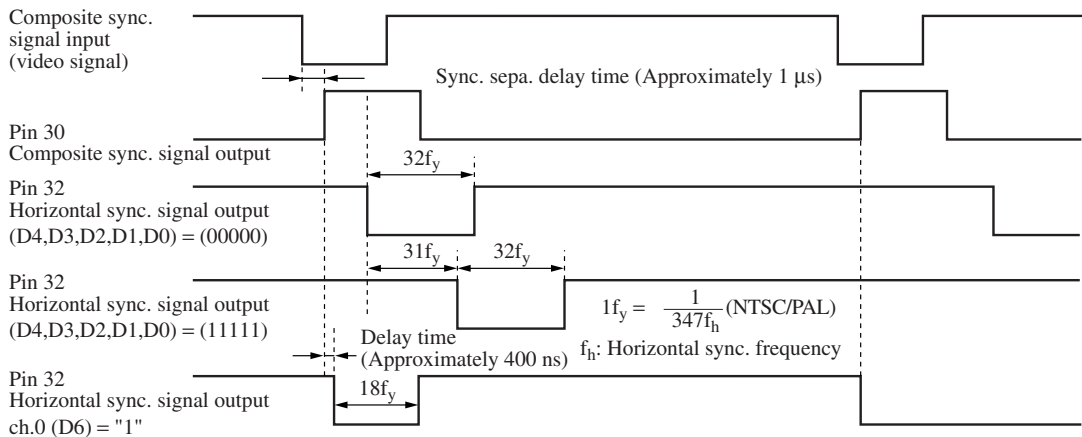

4) Mode setup channel bit-map. (continued)

- Horizontal PLL start position adjustment range

- ch.1: Horizontal sync. output position adjustment

D11	D10	D9	D8	D7 V Mode	D6 YUV	D5 RGB	D4	D3	D2	D1	D0
1	0	0	0	—	—	0	Video signal input display mode				
				—	—	1	Analog RGB input display mode				
				—	0	Chroma signal input mode					
				—	1	Color-difference signal input mode					
				0	PAL						
				1	NTSC						

The delay time of pin 30 output to video signal is likely to vary according to an external constant connected to pin 45. For an external constant, you are required to evaluate adequately the characteristics in weak electric field. Though the horizontal sync signal output adjustment range is designed by referring to the center of pin 30 output pulse, there would be some error according to VCO free-run frequency.

2. I²C control mode

A serial data is capable of transferring 9-bit unit of 8-bit transfer data and 1-bit answering data using two kinds of signal lines of data and shift clock.

When a slave address after setting a start condition matches the address on the IC side, you can receive the data to be transmitted from then. Once the stop condition is set up, the next transmitting data will be ignored until the start condition is set up.

There are two kinds of transfer mode: an auto-increment mode which does not transmit sub-address, and data upgrade mode which transmits sub-address + data by 2 bites.

The typical models of transmitting sequence are shown below:

1) Start condition

When the S data changes from high-level to low-level at SCLK = high-level, a data receiving mode becomes available.

2) Slave address transfer

The slave address of the AN2526NFH is 88h at pin 49 = high-level and 8Ah at pin 49 = low-level.

3) Sub address transfer

When a data transfer mode bit is 0, all the serial data columns transferred until a stop condition is set is regarded as the data block.

■ Technical Data (continued)

2. I²C control mode (continued)

4) Data transfer

5) Stop condition

When S-data changes from low-level to high-level at SCLK = high-level, data reception is halted.

6) Pulse timing

Timing chart expanded diagram

Parameter	Symbol	Min	Typ	Max	Unit
SCLK clock frequency	t_{SCL}	0	—	400	kHz

Request for your special attention and precautions in using the technical information and semiconductors described in this material

- (1) An export permit needs to be obtained from the competent authorities of the Japanese Government if any of the products or technologies described in this material and controlled under the "Foreign Exchange and Foreign Trade Law" is to be exported or taken out of Japan.
- (2) The technical information described in this material is limited to showing representative characteristics and applied circuit examples of the products. It does not constitute the warranting of industrial property, the granting of relative rights, or the granting of any license.
- (3) The products described in this material are intended to be used for standard applications or general electronic equipment (such as office equipment, communications equipment, measuring instruments and household appliances).
Consult our sales staff in advance for information on the following applications:
 - Special applications (such as for airplanes, aerospace, automobiles, traffic control equipment, combustion equipment, life support systems and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.
 - Any applications other than the standard applications intended.
- (4) The products and product specifications described in this material are subject to change without notice for reasons of modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.
- (5) When designing your equipment, comply with the guaranteed values, in particular those of maximum rating, the range of operating power supply voltage and heat radiation characteristics. Otherwise, we will not be liable for any defect which may arise later in your equipment.
Even when the products are used within the guaranteed values, redundant design is recommended, so that such equipment may not violate relevant laws or regulations because of the function of our products.
- (6) When using products for which dry packing is required, observe the conditions (including shelf life and after-unpacking standby time) agreed upon when specification sheets are individually exchanged.
- (7) No part of this material may be reprinted or reproduced by any means without written permission from our company.

Please read the following notes before using the datasheets

- A. These materials are intended as a reference to assist customers with the selection of Panasonic semiconductor products best suited to their applications.
Due to modification or other reasons, any information contained in this material, such as available product types, technical data, and so on, is subject to change without notice.
Customers are advised to contact our semiconductor sales office and obtain the latest information before starting precise technical research and/or purchasing activities.
- B. Panasonic is endeavoring to continually improve the quality and reliability of these materials but there is always the possibility that further rectifications will be required in the future. Therefore, Panasonic will not assume any liability for any damages arising from any errors etc. that may appear in this material.
- C. These materials are solely intended for a customer's individual use.
Therefore, without the prior written approval of Panasonic, any other use such as reproducing, selling, or distributing this material to a third party, via the Internet or in any other way, is prohibited.
