Power Control IC for ASSPs AN30213A

■ Overview

The AN30213A IC has three channels of PWM-based DC-DC converter control outputs.

Able to operate on a minimum operating voltage as low as 1.7V, the IC can be powered from two batteries. A time-sharing system does not require a transformer in the CCD power supply circuit. A built-in switched capacitor type phase compensation filter and error amp controlled soft-start system allow fewer externally connected components, minimizing the mounting area.

■ Feature

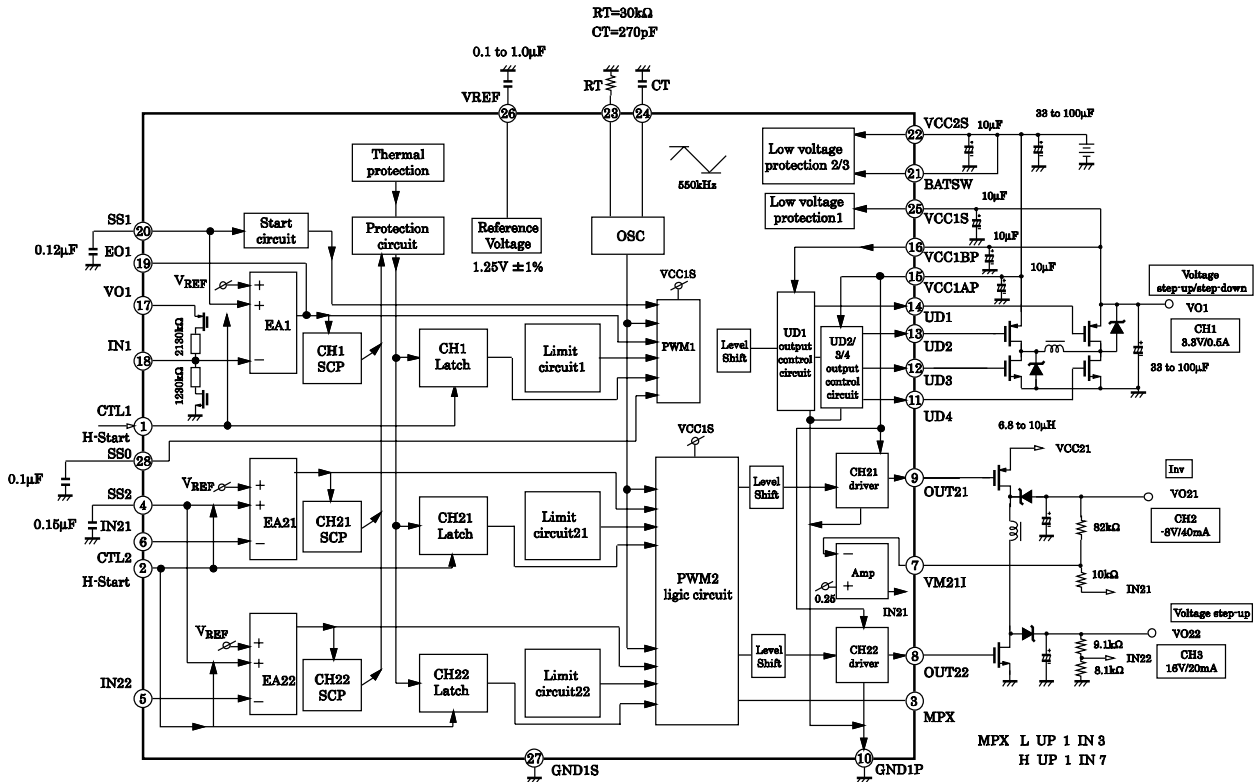

- Can be powered from two "AA" batteries (1.7V to 3.2V) or one lithium battery cell (2.6V to 5.5V)
- 3-channel power outputs
3.3V power supply for synchronous rectifier voltage rise/fall control
16V/-8V power supply for time-sharing control
- Independent control for all channels
- Built-in low-input voltage malfunction prevention function (2 "AA" batteries: 1.51V, 1 lithium cell: 2.52V)
- Built-in timer latch type protection against short-circuits
- External setting for soft start
- Built-in phase compensation filter
- Time-sharing proportion: voltage rise 1/inversion 3 or voltage rise 1/inversion 7; selectable with setting terminal
- Ultra-small, slim package

■ Applications

CCD cameras (digital still cameras, cellular phone cameras, etc.)

■ Pin Description

Pin No.	Symbol	Description	Pin No.	Symbol	Description
1	CTL1	Ch.1 ON-OFF start-up input pin	15	VCC1AP	Ch.1(UD2/3/4) and Ch.21/22 driver Vcc
2	CTL2	Ch.21/22 ON-OFF start-up input pin	16	VCC1BP	Ch.1,UD1 driver Vcc
3	MPX	Time-sharing setting pin	17	VO1	Ch.1 detection resistance pin
4	SS2	Ch.21/22 soft-start setting pin	18	IN1	Ch.1 error amp inverting input pin
5	IN22	Ch.22 error amp inverting input pin	19	EO1	Ch.1 error amp inverting input pin
6	IN21	Ch.21 error amp inverting input pin	20	SS1	Ch.1 soft-start setting pin
7	VM21	Ch.2 error amp inverting input pin	21	BATSW	Low voltage protection switching pin for battery
8	OUT22	Ch.22 driver output pin	22	VCC2S	Battery voltage application pin
9	OUT21	Ch.21 driver output pin	23	RT	Oscillator frequency setup resistor connection pin
10	GND1P	Ground pin for Ch.1/21/22 driver	24	CT	Oscillator frequency setup capacitor connection pin
11	UD4	Ch.1 step-up/down output gate pin 4	25	VCC1S	Signal Vcc
12	UD3	Ch.1 step-up/down output gate pin 3	26	VREF	Reference voltage output
13	UD2	Ch.1 step-up/down output gate pin 2	27	GND1S	Signal GND
14	UD1	Ch.1 step-up/down output gate pin 1	28	SS0	Ch.1 PWM soft-start setting pin

■ Absolute Maximum Ratings

Parameter	Symbol	Rating	Unit	Note
Power supply voltage	V_{CC1S}	6.9	V	1
	V_{CC2S}	6.9	V	
Supply current	I_{CC}	–	A	
Power dissipation	P_d	112	mW	2
Operating ambient temperature	T_{opr}	–20 to 85	°C	3
Storage temperature	T_{stg}	–55 to 125	°C	3
V_{CC1AP}/V_{CC1BP} terminal	V_{CC1AP}/V_{CC1BP}	6.9	V	4
CTL1/2 terminal	VCTL1/2	–0.2 to ($V_{CC2S}+0.1$)	V	4
MPX terminal	VMPX	–0.2 to ($V_{CC2S}+0.1$)	V	
IN1/21/22 terminal	VIN1/2	–0.2 to ($V_{CC1S}+0.1$)	V	4

Note 1: The values under the condition not exceeding the above absolute maximum ratings and the power dissipation.

Note 2: The power dissipation shown is the value at $T_a=85^{\circ}\text{C}$ for the independent (unmounted) IC package without a heat sink.

Note 3: Except for the power dissipation, operating ambient temperature, and storage temperature, all ratings are for $T_a=25^{\circ}\text{C}$.

Note 4: Do not put any current or electric pressure to pins not specified.

■ Operating supply voltage range

Operating supply voltage range	V_{CC1S}	3.0V to 3.6V	*
	V_{CC2S}	1.7V to 5.5V	

* The values under the condition not exceeding the above absolute maximum ratings and the power dissipation.

- (4) The products described in this material are intended to be used for standard applications or general electronic equipment (such as office equipment, communications equipment, measuring instruments and household appliances).
Consult our sales staff in advance for information on the following applications:
 - Special applications (such as for airplanes, aerospace, automobiles, traffic control equipment, combustion equipment, life support systems and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.
 - Any applications other than the standard applications intended.
- (5) The products and product specifications described in this material are subject to change without notice for modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.
- (6) When designing your equipment, comply with the guaranteed values, in particular those of maximum rating, the range of operating power supply voltage, and heat radiation characteristics. Otherwise, we will not be liable for any defect which may arise later in your equipment.
Even when the products are used within the guaranteed values, take into the consideration of incidence of break down and failure mode, possible to occur to semiconductor products. Measures on the systems such as redundant design, arresting the spread of fire or preventing glitch are recommended in order to prevent physical injury, fire, social damages, for example, by using the products.
- (7) When using products for which damp-proof packing is required, observe the conditions (including shelf life and amount of time let standing of unsealed items) agreed upon when specification sheets are individually exchanged.
