## 3-pin Negative Output Voltage Regulators (1A Type)

### Overview

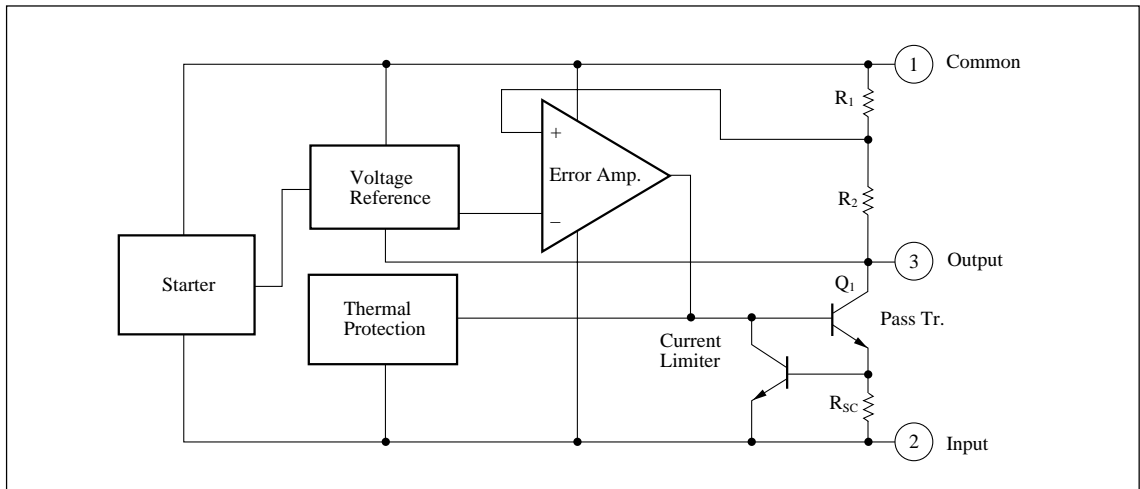

The AN7900T/AN7900F series is 3-pin fixed negative output type monolithic voltage regulators. A stabilized fixed negative output voltage is obtained from an unstable DC input voltage without using any external parts. Eleven types of fixed output voltage are available from  $-5V$  through  $-10V$ ,  $-12V$ ,  $-15V$ ,  $-18V$ ,  $-20V$ , and  $-24V$ . They can be used widely as power circuits with a current capacitance of up to 1A.
