

### General Description

- Trench Power MV MOSFET technology
- Low  $R_{DS(ON)}$
- Low Gate Charge
- Optimized for fast-switching applications

### Applications

- Synchronous Rectification in DC/DC and AC/DC Converters
- Industrial and Motor Drive applications

### Product Summary

|                                 |                                    |
|---------------------------------|------------------------------------|
| $V_{DS}$                        | 150V                               |
| $I_D$ (at $V_{GS}=10V$ )        | 106A                               |
| $R_{DS(ON)}$ (at $V_{GS}=10V$ ) | < 11m $\Omega$ (10.7m $\Omega^*$ ) |

100% UIS Tested  
100% Rg Tested

| Orderable Part Number | Package Type | Form        | Minimum Order Quantity |
|-----------------------|--------------|-------------|------------------------|
| AOT2502L              | TO-220       | Tube        | 1000                   |
| AOB2502L              | TO-263       | Tape & Reel | 800                    |

### Absolute Maximum Ratings $T_A=25^\circ\text{C}$ unless otherwise noted

| Parameter                                      | Symbol         | Maximum    | Units            |
|------------------------------------------------|----------------|------------|------------------|
| Drain-Source Voltage                           | $V_{DS}$       | 150        | V                |
| Gate-Source Voltage                            | $V_{GS}$       | $\pm 20$   | V                |
| Continuous Drain Current                       | $I_D$          | 106        | A                |
| $T_C=25^\circ\text{C}$                         |                | 67         |                  |
| $T_C=100^\circ\text{C}$                        |                |            |                  |

A. The value of  $R_{\theta JA}$  is measured with the device mounted on 1 in<sup>2</sup> FR-4 board with 2oz. Copper, in a still air environment with  $T_A=25^{\circ}\text{C}$ . The Power dissipation  $P_{DSM}$  is based on  $R_{\theta JA} \leq 10\text{s}$  and the maximum allowed junction temperature of  $150^{\circ}\text{C}$ . The value in any given application depends on the user's specific board design, and the maximum temperature of  $150^{\circ}\text{C}$  may be used if the PCB allows it.

B. The power dissipation  $P_D$  is based on  $T_{J(MAX)}=150^{\circ}\text{C}$ , using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

C. Single pulse width limited by junction temperature  $T_{J(MAX)}=150^{\circ}\text{C}$ .

D. The  $R_{\theta JA}$  is the sum of the thermal impedance from junction to case  $R_{\theta JC}$  and case to ambient.

E. The static characteristics in Figures 1 to 6 are obtained using  $<300\mu\text{s}$  pulses, duty cycle 0.5% max.

F. These curves are based on the junction-to-case thermal impedance which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of  $T_{J(MAX)}=150^{\circ}\text{C}$ . The SOA curve provides a single pulse rating.

G. The maximum current rating is package limited.

H. These tests are performed with the device mounted on 1 in<sup>2</sup> FR-4 board with 2oz. Copper, in a still air environment with  $T_A=25^{\circ}\text{C}$ .

THIS PRODUCT HAS BEEN DESIGNED AND QUALIFIED FOR THE CONSUMER MARKET. APPLICATIONS OR USES AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS ARE NOT AUTHORIZED.
