

## General Description

The AOT11S65 & AOB11S65 & AOTF11S65 have been fabricated using the advanced  $\alpha$ MOS™ high voltage process that is designed to deliver high levels of performance and robustness in switching applications. By providing low  $R_{DS(on)}$ ,  $Q_g$  and  $E_{oss}$  along with guaranteed avalanche capability these parts can be adopted quickly into new and existing offline power supply designs.

## Features

|                        |                |
|------------------------|----------------|
| $V_{DS}$ @ $T_{j,max}$ | 750V           |
| $I_{DM}$               | 45A            |
| $R_{DS(ON),max}$       | 0.399 $\Omega$ |
| $Q_{g,tp}$             | 13.2nC         |
| $E_{oss}$ @ 400V       | 2.9 $\mu$ J    |

### Absolute Maximum Ratings $T_A=25^\circ\text{C}$ unless otherwise noted

A. The value of R<sub>θJA</sub> is measured with the device in a still air environment with T<sub>A</sub>=25°C.

B. The power dissipation P<sub>D</sub> is based on T<sub>J(MAX)</sub>=150°C, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

C. Repetitive rating, pulse width limited by junction temperature T<sub>J(MAX)</sub>=150°C. Ratings are based on low frequency and duty cycles to keep initial T<sub>J</sub>=25°C.

D. The R<sub>θJA</sub> is the sum of the thermal impedance from junction to case R<sub>θJC</sub> and case to ambient.

E. The static characteristics in Figures 1 to 6 are obtained using <300 μs pulses, duty cycle 0.5% max.

F. These curves are based on the junction-to-case thermal impedance which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of T<sub>J(MAX)</sub>=150°C. The SOA curve provides a single pulse rating.

G. L=60mH, I<sub>AS</sub>=2A, V<sub>DD</sub>=150V, Starting T<sub>J</sub>=25°C

H. C<sub>o(er)</sub> is a fixed capacitance that gives the same stored energy as C<sub>OSS</sub> while V<sub>DS</sub> is rising from 0 to 80% V<sub>(BR)DSS</sub>.

I. C<sub>o(tr)</sub> is a fixed capacitance that gives the same charging time as C<sub>OSS</sub> while V<sub>DS</sub> is rising from 0 to 80% V<sub>(BR)DSS</sub>.

J. Wavering only allowed at leads.
