Note:

1. “Absolute Maximum Ratings” are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the device should be operated at these limits.

5. Store and Reflow

AP8064 is a moisture sensitive component. The moisture sensitivity classification is **Class 3**.

It's important that the parts are handled under precaution and a proper manner.

The handling, baking and out-of-pack storage conditions of the moisture sensitive components are described in IPC/JEDC S-STD-033A.

The Technologies recommends utilizing the standard precautions listed below.

1. Calculated shelf life in Sealed Bag: 12 months at $<40^{\circ}\text{C}$ and $<90\%$ relative humidity(RH)
2. Peak Package Body Temperature: 250°C
3. After bag is opened, devices that will be subjected to reflow solder of other high temperature process must be:
 - a. Mounted within 168 hours of factory condition $\leq 30^{\circ}\text{C}$ / 60% RH
 - b. Stored at $<10\%$ RH if not used
4. Devices require baking, before mounting if:
 - a. Humidity indicator card is $>10\%$ when read at $23\pm 5^{\circ}\text{C}$ immediately after moisture barrier bag is opened
 - b. Items 3a or 3b is not met
5. If baking is required, please refer to J-STD-033 standard for low temperature (40°C) baking requirement in Tape/Reel form.
