

## Direct PWM Variable Speed Fan Motor Driver

### Features

- **Single Phase Full Wave Fan Driver**
- **Low Supply Current**
- **Built-In Variable Speed Function**
- **Include Hall Bias Circuit**
- **Built-In Lock Protection and Auto Restart Function**
- **FG Output and RD Output Signal available**
- **Built-In Current Limit Circuit**
- **Built-In Thermal Protection Circuit**
- **FG pin HBM/MM ESD can sustain up to 4kV/400V**
- **SSOP-16 Package**
- **Lead Free and Green Devices Available (RoHS Compliant)**

### General Description

The APX9262P is a high efficient direct PWM drive IC with single phase and CMOS drive. Such IC design is suitable for variable speed control FAN of personal computer's power supply radiation and CPU cooler. The device is built-in lock protection. When fan is locked, the device will enter the lockup protection mode. It is also with rotation detection output and thermal shutdown function. In normal operation, supply current is 3mA. The APX9262P is available in SSOP-16 package.

### Applications

- **CPU Cooler**
- **Variable Speed Control Fan**

## Ordering and Marking Information

APX9262P  	Package Code N : SSOP-16 Operating Ambient Temperature Range I : -40 to 90 °C Handling Code TR : Tape & Reel Assembly Material G : Halogen and Lead Free Device
APX9262P N :  APX9262P XXXXX	XXXXX - Date Code

Note: ANPEC lead-free products contain molding compounds/die attach materials and 100% matte tin plate termination finish; which are fully compliant with RoHS. ANPEC lead-free products meet or exceed the lead-free requirements of IPC/JEDEC J-STD-020D for MSL classification at lead-free peak reflow temperature. ANPEC defines "Green" to mean lead-free (RoHS compliant) and halogen free (Br or Cl does not exceed 900ppm by weight in homogeneous material and total of Br and Cl does not exceed 1500ppm by weight).

## Application Information

### Input Protection Diode & Capacitor

The IC should be added a protection diode (D1) to prevent the damage from the power reverse connection. However, the protection diode will cause a voltage drop on the supply voltage. The current rating of the diode must be greater than the maximum output current. For the noise reduction purpose, a capacitor (C1) must connect between VCC and GND. It is the suggestion that C1 should be placed as close as possible to the device VCC pin

### HB Pin & Hall Input

1.3V voltage reference is for hall element bias. Wiring needs to be shortened to prevent carrying of the noise. Hall input amplifier has 20mV hysteresis. Then, we recommend the hall input level to be 60mV or over.

### CT Capacitor

The capacitor that is connected from CT pin to GND determines the shutdown time and restart time.

$$\text{Locked Detection Time} = \frac{C_{CT} \times (V_{CTH} - 0.2V)}{I_{CT1}}$$

$$\text{Restart Time} = \frac{C_{CT} \times (V_{CTH} - V_{CTL})}{I_{CT1}}$$

$$\text{Shutdown Time} = \frac{C_{CT} \times (V_{CTH} - V_{CTL})}{I_{CT2}}$$

where:

$$C_{CT} = \text{CT pin capacitor}$$

For example:

$$\begin{aligned} V_{CC} &= 12V, C_{CT} = 1\mu F \\ \text{Locked Detection Time} &= 1.7s \\ \text{Restart Time} &= 1.1s \\ \text{Shutdown Time} &= 11s \end{aligned}$$

The value of charge capacitor is recommended from 0.47μF to 1μF.

### FG/RD Resistor

The value of the FG/RD resistor could be decided by the following equation:

$$R_{FG} = \frac{V_{DC} - V_{FG}}{I_{FG}}$$

For example:

$$V_{DC} = 6V, I_{FG} = 5mA, V_{FG} = 0.2V, R_{FG} = 1.16k\Omega$$

The value of resistor in the range of 1kΩ to 10kΩ is recommended.
