

# Ultra-miniature, Low Power, 32.768kHz MEMS Oscillator

ASTMKH

ESD Sensitive

RoHS/RoHS II compliant

2.0 x 1.2 x 0.6mm

## Moisture Sensitivity Level (MSL) – 1

### FEATURES:

- Ultra-miniature size: 2.0 x 1.2 x 0.6mm
- Supply Voltage: 1.2V to 3.63V (-10 ~ +70°C); 1.5V to 3.63V (-40 ~ +85°C)
- Ultra-Low Current Consumption: 1.4μA max. (core current, no load)
- Frequency Stabilities include:
  - ±75ppm over -10 to +70°C
  - ±100ppm over -40 to +85°C
- Internal power supply filtering eliminates external bypass capacitor for Vdd port.
- Proprietary NanoDrive™ Technology by SiTime enables programmable output swing for lower power

### APPLICATIONS:

- Timekeeping
- Battery Management
- Mobile devices
- RTC reference clock
- Wireless accessories
- Fitness/Medical monitoring sensors
- Sport video cams

### STANDARD SPECIFICATIONS:

| Parameters                                                                                             |                 | Min                 | Typ          | Max                 | Unit               | Notes                                                                                                                                                                                                                                                            |

| DC-biased Programmable Output Voltage Low Range ( $V_{OL}$ )  |        | 0.35 to 0.80  |        | V    | $V_{dd}$ : 1.5-3.63V. $I_{OL}$ = 0.2 $\mu$ A. 10pF load. See Part Identification section for available $V_{OH}$ / $V_{OL}$ levels.  |
| Programmable Output Voltage Swing Tolerance                   | -0.055 |               | +0.055 | V    | $T_A$ = -40°C to +85°C, $V_{dd}$ : 1.5-3.63V                                                                                        |

Note:

1. Measured peak-to-peak. Tested with Agilent 53132A frequency counter. Due to the low operating frequency, the gate time must be  $\geq 100$ ms to ensure an accurate frequency measurement.
2. Stability is specified for two operating voltage ranges. Stability progressively degrades with supply voltage below 1.5V. Measured peak-to-peak. Inclusive of initial tolerance at +25°C, and variations over operating temperature, rated power supply voltage and load.
3. Core operating current does not include output driver operating current or load current. To derive total operating current (no load), add core operating current + output driver operating current, where output driver operating current =  $C_{driver} * V_{out} * F_{out}$ .
4. Measured from the time  $V_{dd}$  reaches 1.5V.
5. NanoDrive™ is a SiTime trademark.

## Absolute Maximum Ratings

Attempted operation outside the absolute maximum ratings may cause permanent damage to the part. Actual performance of the IC is only guaranteed within the operational specifications, not at absolute maximum ratings.

| Pin | Name            | I/O                 | Functionality                                                                                                                                                                                                                                                                                                                |
|-----|-----------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1   | NC              | No Connect          | No connection. Will not respond to any input signal.                                                                                                                                                                                                                                                                         |
| 2   | GND             | Power Supply Ground | Connect to ground. All GND pins must be connected to power supply ground.                                                                                                                                                                                                                                                    |
| 3   | CLK Out         | OUT                 | Oscillator clock output.                                                                                                                                                                                                                                                                                                     |
| 4   | V <sub>dd</sub> | Power Supply        | Connect to power supply 1.5V≤V <sub>dd</sub> ≤3.63V for operation over -40°C to +85°C temperature range. Under normal operating conditions, V <sub>dd</sub> doesn't require external bypass/decoupling capacitor(s). Internal power supply filtering will reject more than ±150mVpp with frequency components through 10MHz. |

REFLOW PROFILE:

| Item                                                | Conditions       |
|-----------------------------------------------------|------------------|
| T <sub>S</sub> MAX to T <sub>L</sub> (Ramp-up Rate) | 3°C/second max   |
| Preheat                                             |                  |
| Temperature Minimum (T <sub>S</sub> MIN)            | 150°C            |
| Temperature Typical (T <sub>S</sub> TYP)            | 175°C            |
| Temperature Maximum (T <sub>S</sub> MAX)            | 200°C            |
| Time (t <sub>s</sub> )                              | 60 – 180 seconds |
| Ramp-up Rate (T <sub>L</sub> to T <sub>P</sub> )    | 3°C/second max   |
| Time Maintained Above Temperature (T <sub>L</sub> ) | 217°C            |
| Time (t <sub>L</sub> )                              | 60 – 150 seconds |
| Peak Temperature (T <sub>P</sub> )                  | 260°C max        |
| Target Peak Temperature (T <sub>P</sub> Target)     | 255°C            |
| Time within 5°C of actual peak (t <sub>P</sub> )    | 20 – 40 seconds  |
| Max. Number of Reflow Cycles                        | 3                |
| Ramp-down Rate                                      | 6°C/second max   |
| Time 25°C to Peak Temperature (t)                   | 8 minutes max    |

Ultra-miniature, Low Power, 32.768kHz MEMS Oscillator

ASTMKH

Pb RoHS/RoHS II compliant
