# Secure Microcontroller for Smart Cards

# AT90SC 9618RCT Summary

# Description

The AT90SC9618RCT is a low-power, high-performance, 8/16-bit microcontroller with ROM program memory, EEPROM data memory and a crypto-accelerator, based on the secureAVR enhanced RISC architecture. By executing powerful instructions in a single clock cycle, the AT90SC9618RCT achieves throughputs close to 1 MIPS per MHz. Its Harvard architecture includes 32 general purpose working registers directly connected to the ALU, allowing two independent registers to be accessed in one single instruction executed in one clock cycle.

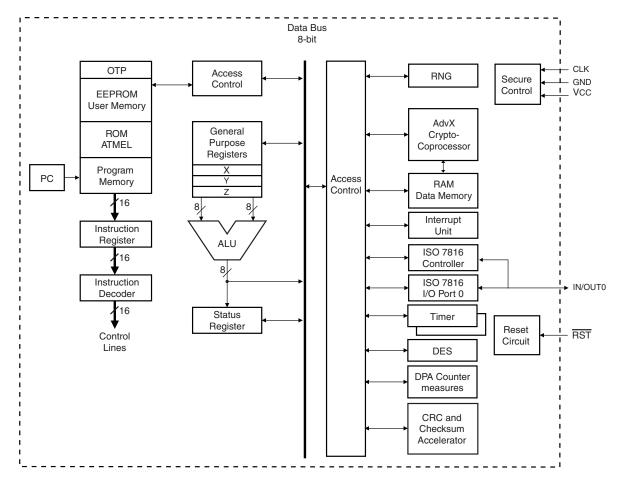

The AT90SC9618RCT uses the secureAVR that allows the linear addressing of up to 8M bytes of code and up to 16M bytes of data as well as a number of new functional and security features.

The AT90SC9618RCT includes 18K bytes of Atmel's high density, non volatile memory. The crypto engine featured in the AT90SC series is the AdvX, a 32-bit accelerator dedicated to perform fast encryption or authentication functions.

Additional security features include power and frequency protection logic, logical scrambling on program data and addresses, Power Analysis countermeasures and memory accesses controlled by a supervisor mode.

Figure 1 shows the AT90SC9618RCT secureAVR Enhanced RISC Architecture.
