- Ultra-High Qs
- DC to 50 GHz
- .06 pF to 4700 pF
- Capacitor Arrays
- Custom sizes, values, shapes, tolerances and higher voltages
- Low Cost
- Broadband Applications
- Not Static Sensitive
- High Reliability Testing

**ATC 111 SERIES MICROCAP®** capacitors have beveled edges to minimize the potential for crack propagation due to mechanical or thermal shock by eliminating abrupt metal-to-ceramic interfaces. Longer arc-over paths help reduce shorting during epoxy die attachment.

**ATC 116 SERIES MICROCAP®** capacitors have a conventional straight-sided design which allows the user the ability to match stripline widths or design a custom capacitor for limited circuit dimensions.

**ATC 112 SERIES BI-TRIM®** capacitors are Binary capacitors in 1:2:2:4 or 1:2:4:8 configurations. This arrangement permits adjustment (trimming) of the capacity value to a desired value by connecting sections in parallel. This is a highly stable variable capacitor with none of the drawbacks of mechanically variable capacitors such as contact resistance, shock and vibration sensitivity.

**ATC 113 SERIES TWIN/CAP®** capacitors are two capacitors on one substrate that are useful in microstrip lines to minimize lead inductance in coupling applications for frequencies as high as 50 GHz. The coupling without appreciable inductance is achieved by utilizing the two capacitors in series. The unique configuration, low-profile and low inductance TWIN/CAPS® provide low insertion loss and extremely high resonant frequencies.

Let ATC assist in designing your custom component.

# ATC Single Layer Capacitors: General Specifications

## ELECTRICAL CHARACTERISTICS

**OPERATING FREQUENCY:** Up to 50 GHz.

**RESONANT FREQUENCY:** See curve below.

**STANDARD MEASUREMENT FREQUENCY:**

1 MHz for .06 to 100 pF; 1 KHz for values greater than 100 pF.

**INSULATION RESISTANCE:**

$10^{11}$  ohms min. at +25°C and rated voltage.

**VOLTAGE RATING:** 100 WVDC.

Consult factory for higher ratings.

**DIELECTRIC TEST VOLTAGE:** 250% of voltage rating for 5 seconds. Impervious to static discharge failures.

## ENVIRONMENTAL CHARACTERISTICS, cont.

These include the following Hi-Rel tests in accordance with MIL-STD-202:

- Immersion (method 104, MIL-STD-202)
- Resistance to soldering heat (method 210, MIL-STD-202)
- Low voltage humidity (MIL-C-49464)
- Moisture resistance (method 106)
- Life test at +125°C and 2X rated voltage (method 108, test cond. F)
- Solderability (method 208)
- Voltage conditioning at +125°C and 2X rated voltage (method 108, test cond. A)

## QUALITY PROGRAM

Stringent process procedures and exacting material requirements ensure that only the highest quality parts are shipped.

ATC's manufacturing and Quality Testing facilities comply with the following specifications:

- ISO 10012-1 Quality Assurance for Measuring Equipment
- ANSI / NCSL Z540-1-1994 Calibration Laboratories and Measuring and Test Equipment - General Requirements

[www.DataSheet4U.com](http://www.DataSheet4U.com)

## MECHANICAL CHARACTERISTICS

**HERMETICITY:** The dielectric is virtually unaffected by moisture and commonly used cleaning solvents.

**RUGGED CONSTRUCTION** to minimize bonding problems and circuit assembly problems.

**BOND STRENGTH:** All terminations meet or exceed MIL-STD-883 Method 2019 for Die shear strength. Wire bondability meets or exceeds MIL-C-49464 Paragraph 3.12 as well as MIL-STD-883 Method 2011.

## ENVIRONMENTAL CHARACTERISTICS

**OPERATING TEMPERATURE:**

-55°C to +125°C. (No derating of working voltage)

ATC parallel plate capacitors are designed and manufactured to meet or exceed the requirements of MIL-C-49464.

Use the Standard Capacitance Value chart on pages 6 and 7 to select a code which is within the capacity range given for a specific case size/dielectric combination.

Select a capacitance tolerance from the available tolerances listed in the Selection Chart.

The above part number describes a 100 volt, TT termination (thin film), 111 series (beveled edge) capacitor, case size S (0.018" square nominal), CA dielectric (0 ±30 ppm/°C). This size/dielectric combination has a capacitance range of 0.4 to 0.9 pF and available tolerances of B, C or D. 0R5 defines a capacitance value of 0.5 pF. B tolerance (±0.1 pF) was selected.

ATC accepts orders for our parts using designations *with* or *without* the "ATC" prefix. Both methods of defining the part number are equivalent, i.e., part numbers referenced with the "ATC" prefix are interchangeable to parts referenced without the "ATC" prefix. Customers are free to use either in specifying or procuring parts from American Technical Ceramics.

## Design Your Own Single Layer Capacitor

ATC gives you the ability to create custom values and dimensions. When circuit board area is tight or you need to match your stripline width, you can optimize the size and shape of required SLCs. This same technique can be used to build special values that fall outside of the standard offerings.

### Custom Values and Sizes

Optimize the best combination of length, width, thickness and dielectric material for your circuit/stripline capacitor requirements.

### Design Guidelines

C = Capacitance (pF)	$C = (.225 K \times L \times W) / (1000 T)$
L = Length	10 to 100 mils, may not exceed 20 x T or 2.5 x W
W = Width	10 to 100 mils, may not exceed 20 x T
T = Thickness	4 to 12 mils, less than or equal to L/2 or W/2
