

ATO28XXT SERIES

28V Input, Triple Output

HYBRID-HIGH RELIABILITY DC/DC CONVERTER

Description

The ATO28XXT Series of DC/DC converters feature high power density and an extended temperature range for use in military and industrial applications. Designed to the nominal input requirements of MIL-STD-704D, these devices have nominal 28VDC inputs with +5V and $\pm 12V$ or +5V and $\pm 15V$ triple outputs to satisfy a wide range of requirements. The circuit design incorporates a pulse width modulated push-pull topology operating in the feed-forward mode at a nominal switching frequency of 250KHz. Input to output isolation is achieved through the use of transformers in the forward and feedback circuits.

The advanced feedback design provides fast loop response for superior line and load transient characteristics and offers greater reliability and radiation tolerance than devices incorporating optical feedback circuits.

Three standard temperature grades are offered. Refer to Part Numbering section. They are provided in a standard plug-in package for PC mounting or in a flanged package for more severe environments.

Manufactured in a facility fully qualified to MIL-PRF-38534, these converters are fabricated utilizing DSCC qualified processes. For available screening options, refer to device screening table in the data sheet. Variations in electrical, mechanical and screening can be accommodated. Extensive computer simulation using complex modeling enables modest design modifications to be accommodated. Contact IR Santa Clara with specific requirements.

Features

- 16V to 40VDC Input Range (28VDC Nominal)
- 5V, $\pm 12V$ or 5V, $\pm 15V$ Outputs Available
- Indefinite Short Circuit and Overload Protection
- 15W Output Power
- Fast Loop Response for Superior Transient Characteristics
- Operating Temperature Range from -55°C to $+125^{\circ}\text{C}$ Available
- Popular Industry Standard Pin-out
- Resistance Seam Welded Case for Superior Long Term Hermeticity
- Efficiencies up to 81%
- Shutdown from External Signal
- 200,000 Hour MTBF at 85°C
- Standard Microcircuit Drawings Available

Notes to Specifications

1. Tested at each output.
2. Parameter guaranteed by line and load regulation tests.
3. At least 20 percent of the total output power should be taken from the (+5V) main output.
4. Bandwidth guaranteed by design. Tested for 20KHz to 2.0MHz.
5. An overload is that condition with a load in excess of the rated load but less than that necessary to trigger the short circuit protection and is the condition of maximum power dissipation.
6. Above 85°C case temperature, derate output power linearly to 0 at 115°C case.

$T_{CASE} = -55^{\circ}\text{C}$ to $+105^{\circ}\text{C}$, $V_{IN} = +28\text{V} \pm 5\%$ unless otherwise specified
