## DESCRIPTION

The following specifications are applied to the following IPS-TFT module.

Note : Inverter for back light unit is built in this module.

**Product Name : AX094B001F**

### General Specifications

Effective Display Area	: (H)819.60 × (V)460.80	(mm)
Number of Pixels	: (H)1,366 × (V)768	(pixels)
Pixel Pitch	: (H)0.600 × (V)0.600	(mm)
Color Pixel Arrangement	: R+G+B Vertical Stripe	
Display Mode	: Transmissive Mode Normally Black Mode	
Top Polarizer Type	: Anti-Glare	
Number of Colors	: 16,777,216	(colors)
Viewing Angle Range	: Super Wide Version (Horizontal & Vertical : 170°, CR ≥ 10)	
Input Signal	: 1-channel LVDS (LVDS:Low Voltage Differential Signaling)	
Back Light	: External Electrode Fluorescent Lamp	
External Dimensions	: (H)877.0 × (V)516.8 × (t)55.5	(mm)
Weight	: 9,500g Typ.	

# 1. ABSOLUTE MAXIMUM RATINGS

## 1.1 Environmental Absolute Maximum Ratings

ITEM	Operating		Storage		Unit	Note
	Min.	Max.	Min.	Max.		
Temperature	0	50	-20	60	°C	1),5)
Humidity	2)		2)		%RH	1)
Vibration	-	4.9(0.5G)	-	9.8(1.0G)	m/s <sup>2</sup>	3)
Shock	-	29.4(3G)	-	294(30G)	m/s <sup>2</sup>	4)
Corrosive Gas	Not Acceptable		Not Acceptable		-	
Illumination at LCD Surface	-	50,000	-	50,000	lx	

Note 1) Temperature and Humidity should be applied to the glass surface of a IPS-TFT module, not to the system installed with a module.

The temperature at the center of rear surface should be less than 70°C on the condition of operating. The brightness of a lamp tends to drop at low temperature. Besides, the life-time becomes shorter at low temperature.

2)  $T_a \leq 40^\circ\text{C}$  ······Relative humidity should be less than 85%RH max. Dew is prohibited.

$T_a > 40^\circ\text{C}$  ······Relative humidity should be lower than the moisture of the 85%RH at 40°C.

3) Frequency of the vibration is between 15Hz and 100Hz. (Remove the resonance point)

4) Pulse width of the shock is 10 ms. All mounting holes should be fixed.

5) Long operation under low temperature may cause some portion of display area to be reddish for several minutes after turning on the product.

However, it does not affect the characteristics and reliability of the product.

## 1.2 Electrical Absolute Maximum Ratings

### (1) IPS-TFT Module

V<sub>SS</sub> = 0 V

ITEM	SYMBOL	Min.	Max.	Unit	Note
Power Supply Voltage	V <sub>DD</sub>	0	13.2	V	
Input Voltage for logic	V <sub>I</sub>	-0.3	3.6	V	1)
Electrostatic Durability	V <sub>ESD0</sub>	±100		V	2),3)
	V <sub>ESD1</sub>	±8		kV	2),4)

Note 1) It is applied to pixel data signal and clock signal.

2) Discharge Coefficient : 200pF-250Ω, Environmental : 25°C-70%RH

3) It is applied to I/F connector pins.

4) It is applied to the surface of a metallic bezel and a LCD panel.

### (2) Back-light Inverter

V<sub>SS</sub> = 0 V

ITEM	SYMBOL	Min.	Max.	Unit	Note
Input Voltage	V <sub>in</sub>	0	28.0	V	
ON/OFF Control Input Voltage	ON/OFF	-0.3	5.5	V	
PWM signal Voltage	V <sub>pwm</sub>	-0.3	5.5	V	

## 2. OPTICAL CHARACTERISTICS

The following optical characteristics are measured under stable conditions. It takes about 30 minutes to reach stable conditions. The measuring point is the center of display area unless otherwise noted.

The optical characteristics should be measured in a dark room or equivalent state.

Measuring equipment : CS-1000A, or equivalent

Temperature =25°C, VDD=12.0V, f V=60Hz, Vin=24V,

BRT =High (PWM Duty:100%)

		$\Delta y$		-	-	0.04		
Contrast Ratio at 85°		CR85°	10	-	-	-	-	

Note 1) Definition of Viewing Angle

2) Definition of Contrast Ratio (CR)

$$CR = \frac{\text{(Luminance at displaying WHITE)}}{\text{(Luminance at displaying BLACK)}}$$

3) Definition of Response Time

4) Definition of Brightness Uniformity

Display pattern is white (255 level). The brightness uniformity is defined as the following equation. Brightness at each point is measured, and average, maximum and minimum brightness is calculated.

$$Buni = \frac{|B_{max} \text{ or } B_{min} - B_{ave}|}{B_{ave}} \times 100$$

where,  $B_{max}$  = Maximum brightness

$B_{min}$  = Minimum brightness

$$B_{ave} = \text{Average brightness} = \frac{\sum_{k=1}^9 (B(k))}{9}$$

5) Variation of color position on CIE is defined as difference between colors at  $\theta = 0^\circ$  and at  $\theta = 50^\circ$  &  $\phi = 0^\circ, 90^\circ, 180^\circ, 270^\circ$ .

### 3. ELECTRICAL CHARACTERISTICS

#### 3.1 TFT-LCD Module

## 8. DESIGNATION OF LOT MARK

### 8.1 LOT MARK

#### Notes

1)

Year	Mark
2006	06
2007	07
2008	08

2)

Month	Mark	Month	Mark
1	01	7	07
2	02	8	08
3	03	9	09
4	04	10	10
5	05	11	11

29~31	5

4) It is the mark that was opened up by production person to take correspondence with production number.

### 8.2 Revision (REV.) control

REV. is the column for manufacturing convenience. A-Z except I and O may be written on this column.

### 8.3 Location of lot mark

Lot mark is printed on a label. The label is on the metallic bezel as shown in 7. External Dimensional. The style of character will be changed without notice.

## 9. PRECAUTION

Please pay attention to the followings when a IPS-TFT module with a back-light unit is used, handled and mounted.

### 9.1 Precaution to handling and mounting

- (1) Applying strong force to a part of the module may cause partial deformation of frame or mold, and cause damage to the display.
- (2) The module should gently and firmly be held by both hands. Never hold by just one hand in order to avoid any internal damage. Never drop or hit the module.
- (3) The module should be installed with mounting holes of a module.
- (4) Uneven force such as twisted stress should not be applied to a module when a module is mounted on the cover case. The cover case must have sufficient strength so that external force can not be transmitted directly to a module.
- (5) It is recommended to leave a space between a module and a holding board of a module so that partial force is not applied to a module.

Fig.1 Cross sectional view of a monitor set

- (6) The edge of a cover case should be located inside more than 1mm from the edge of a module front frame.
- (7) A transparent protective plate should be added on the display area of a module in order to protect a polarizer and IPS-TFT cell. The transparent protective plate should have sufficient strength so that the plate can not touch a module by external force.
- (8) Materials included acetic acid and choline should not be used for a cover case as well as other parts and boards near a module. Acetic acid attacks a polarizer. Choline attacks electric circuits due to electro-chemical reaction.
- (9) The polarizer on a TFT cell should carefully be handled due to its softness, and should not be touched, pushed or rubbed with glass, tweezers or anything harder than HB pencil lead. The surface of a polarizer should not be touched and rubbed with bare hand, greasy clothes or dusty clothes.
- (10) The surface of a polarizer should be gently wiped with absorbent cotton, chamois or other soft materials slightly contained petroleum benzene when the surface becomes dirty. Normal-hexane as cleaning chemicals is recommended in order to clean adhesives which fix front/rear polarizers on a IPS-TFT cell. Other cleaning chemicals such as acetone, toluen and alcohol should not be used to clean adhesives because they cause chemical damage to a polarizer.
- (11) Saliva or water drops should be immediately wiped off. Otherwise, the portion of a polarizer may be deformed and its color may be faded.
- (12) The module should not be opened or modified. It may cause not to operate properly.

- (13) Metallic bezel of a module should not be handled with bare hand or dirty gloves. Otherwise, color of a metallic frame may become dirty during its storage. It is recommended to use clean soft gloves and clean finger stalls when a module is handled at incoming inspection process and production (assembly) process.
- (14) Lamp(EEFL) cables should not be pulled and held.

## **9.2 Precaution to operation**

- (1) The ambient temperature near the operated module should be satisfied with the absolute maximum ratings. Unless it meets the specifications, sufficient cooling system should be adopted to system.
- (2) The spike noise causes the mis-operation of a module. The level of spike noise should be as follows:  
 $-200\text{mV} \leq \text{over- and under- shoot of VDD} \leq +200\text{mV}$   
 VDD including over- and under- shoot should be satisfied with the absolute maximum ratings.
- (3) Optical response time, luminance and chromaticity depend on the temperature of a IPS-TFT module. Response time and saturation time of EEFL luminance become longer at lower temperature operation.
- (4) Sudden temperature change may cause dew on and/or in the a module. Dew males damage to a polarizer and/or electrical contacting portion. Dew causes fading of displayed quality.
- (5) Fixed patterns displayed on a module for a long time may cause after-image. It will be recovered soon.
- (6) A module has high frequency circuits. Sufficient suppression to electromagnetic interference should be done by system manufacturers. Grounding and shielding methods may be effective to minimize the interference.
- (7) Noise may be heard when a back-light is operated. If necessary, sufficient suppression should be done by system manufacturers.
- (8) The module should not be connected or removed while a main system works.
- (9) Inserting or pulling I/F connectors causes any trouble when power supply and signal dates are on-state. I/F connectors should be inserted and pulled after power supply and signal dates are turned off.

## **9.3 Electrostatic discharge control**

- (1) Since a module consists of a IPS-TFT cell and electronic circuits with CMOS-ICs, which are very weak to electrostatic discharge, persons who are handling a module should be grounded through adequate methods such as a list band. I/F connector pins should not be touched directly with bare hands.
- (2) Protection film for a polarizer on a module should be slowly peeled off so that the electrostatic charge can be minimized.

## **9.4 Precaution to strong light exposure**

- (1) A module should not be exposed under strong light. Otherwise, characteristics of a polarizer and color filter in a module may be degraded.

## **9.5 Precaution to storage**

When modules for replacement are stored for a long time, following precautions should be taken care of:

- (1) Modules should be stored in a dark place. It is prohibited to apply sunlight or fluorescent light during storage. Modules should be stored at 0 to 35°C at normal humidity (60%RH or less).
- (2) The surface of polarizers should not come in contact with any other object. It is recommended that modules should be stored in the Hitachi's shipping box.

## **9.6 Precaution to handling protection film**

- (1) The protection film for polarizers should be peeled off slowly and carefully by persons who are electrically grounded with adequate methods such as a wrist band. Besides, ionized air should be blown over during peeling action. Dusts on a polarizer should be blown off by an ionized nitrogen gun and so on.
- (2) The protection film should be peeling off without rubbing it to the polarizer. Because, if the film is rubbed together with the polarizer, since the film is attached to the polarizer with a small amount of adhesive, the adhesive may remain on a polarizer.
- (3) The module with protection film should be stored on the conditions explained in 10.5 (1). However, in case that the storage time is too long, adhesive may remain on a polarizer even after a protection film is peeled off. Besides, in case that a module is stored at higher temperature and/or higher humidity, adhesive may remain on a polarizer. The remained adhesive may cause non-uniformity of display image.
- (4) The adhesive can be removed easily with Normal-Hexane. The remained adhesive or its vestige on the polarizer should be wiped off with absorbent cotton or other soft materials such as chamois slightly contained Normal-Hexane.

## **9.7 Safety**

- (1) Since a IPS-TFT cell and lamps are made of glass, handling to the broken module should be taken care sufficiently in order not to be injured. Hands touched liquid crystal from a broken cell should be washed sufficiently.
- (2) The module should not be taken apart during operation so that back-light drives by high voltage.

## **9.8 Environmental protection**

- (1) The IPS-TFT module contains cold cathode fluorescent lamps. Please follow local ordinance or regulations for its disposal.
- (2) Flexible printed circuits and printed circuits board used in a module contain small amount of lead. Please follow local ordinance or regulations for its disposal.

## **9.9 Use restrictions and limitations**

- (1) This product is not authorized for use in life support devices or systems, military applications or other applications which pose a significant risk of personal injury.
- (2) In no event shall IPS Alpha Technology, Ltd., be liable for any incidental, indirect or consequential damages in connection with the installation or use of this product, even if informed of the possibility thereof in advance. These limitations apply to all causes of action in the aggregate, including without limitation breach of contract, breach of warranty, negligence, strict liability, misrepresentation and other torts.

## **9.10 Others**

Electrical components which may not affect electrical performance are subjective to change without notice because of their availability.
