

## PWM Control 3.5A Step-Down Converter

### ❖ GENERAL DESCRIPTION

AX4103 consists of step-down switching regulator with PWM control. These devise include a reference voltage source, oscillation circuit, error amplifier, internal PMOS and etc.

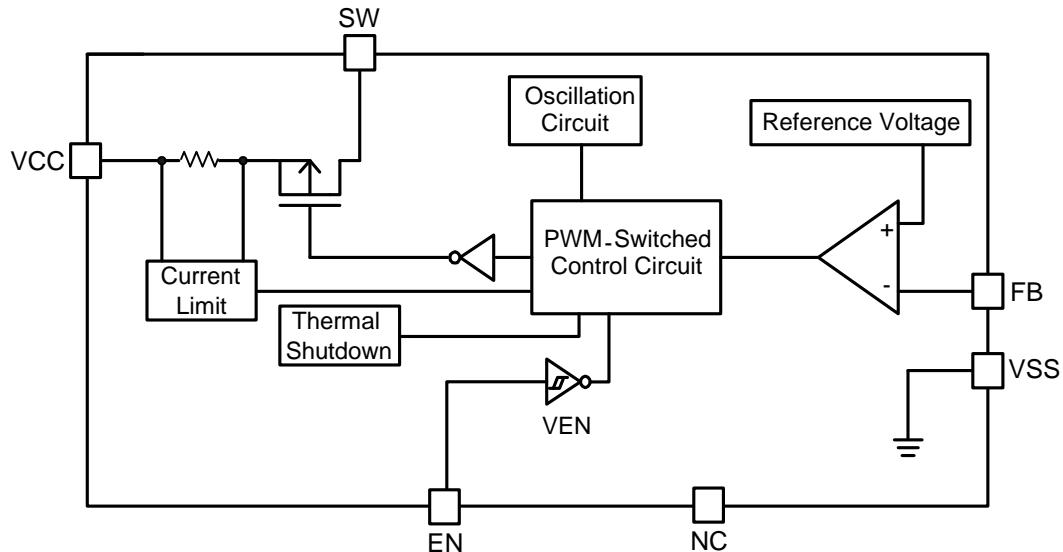

AX4103 provides low-ripple power, high efficiency, and excellent transient characteristics. The PWM control circuit is able to the duty ratio linearly form 0 up to 100%. An enable function, an over current protect function and short circuit protect function are built inside, and when OCP or SCP happens, the operation frequency will be reduced. Also, an internal compensation block is built in to minimum external component count.

With the addition of an internal P-channel Power MOS, a coil, capacitors, and a diode connected externally, these ICs can function as step-down switching regulators. They serve as ideal power supply units for portable devices when coupled with the SOP-8L package, providing such outstanding features as low current consumption.

### ❖ FEATURES

- Input voltage : 4.5V to 23V
- Output voltage : 0.8V to V<sub>CC</sub>
- Duty ratio : 0% to 100% PWM control
- Oscillation frequency : 330KHz typ.
- Current Limit (CL), Enable function.
- Thermal Shutdown function.
- Short Circuit Protect (SCP).
- Built-in internal SW P-channel MOS.
- SOP-8L Pb-Free package.

❖ PIN ASSIGNMENT

The package of AX4103 is SOP-8L; the pin assignment is given by:

Name	Description
FB	Feedback pin
EN	Power-off pin H : normal operation(Step-down) L : Step-down operation stopped (All circuits deactivated)
NC	No Connect pin
VCC	IC power supply pin
SW	Switch pin. Connect external inductor and diode here.
Vss	GND pin

### ❖ APPLICATION CIRCUIT

### ❖ FUNCTION DESCRIPTIONS

#### PWM Control

The AX4103 consists of DC/DC converters that employ a pulse-width modulation (PWM) system. In converters of the AX4103, the pulse width varies in a range from 0 to 100%, according to the load current. The ripple voltage produced by the switching can easily be removed through a filter because the switching frequency remains constant. Therefore, these converters provide a low-ripple power over broad ranges of input voltage and load current.

#### Setting the Output Voltage

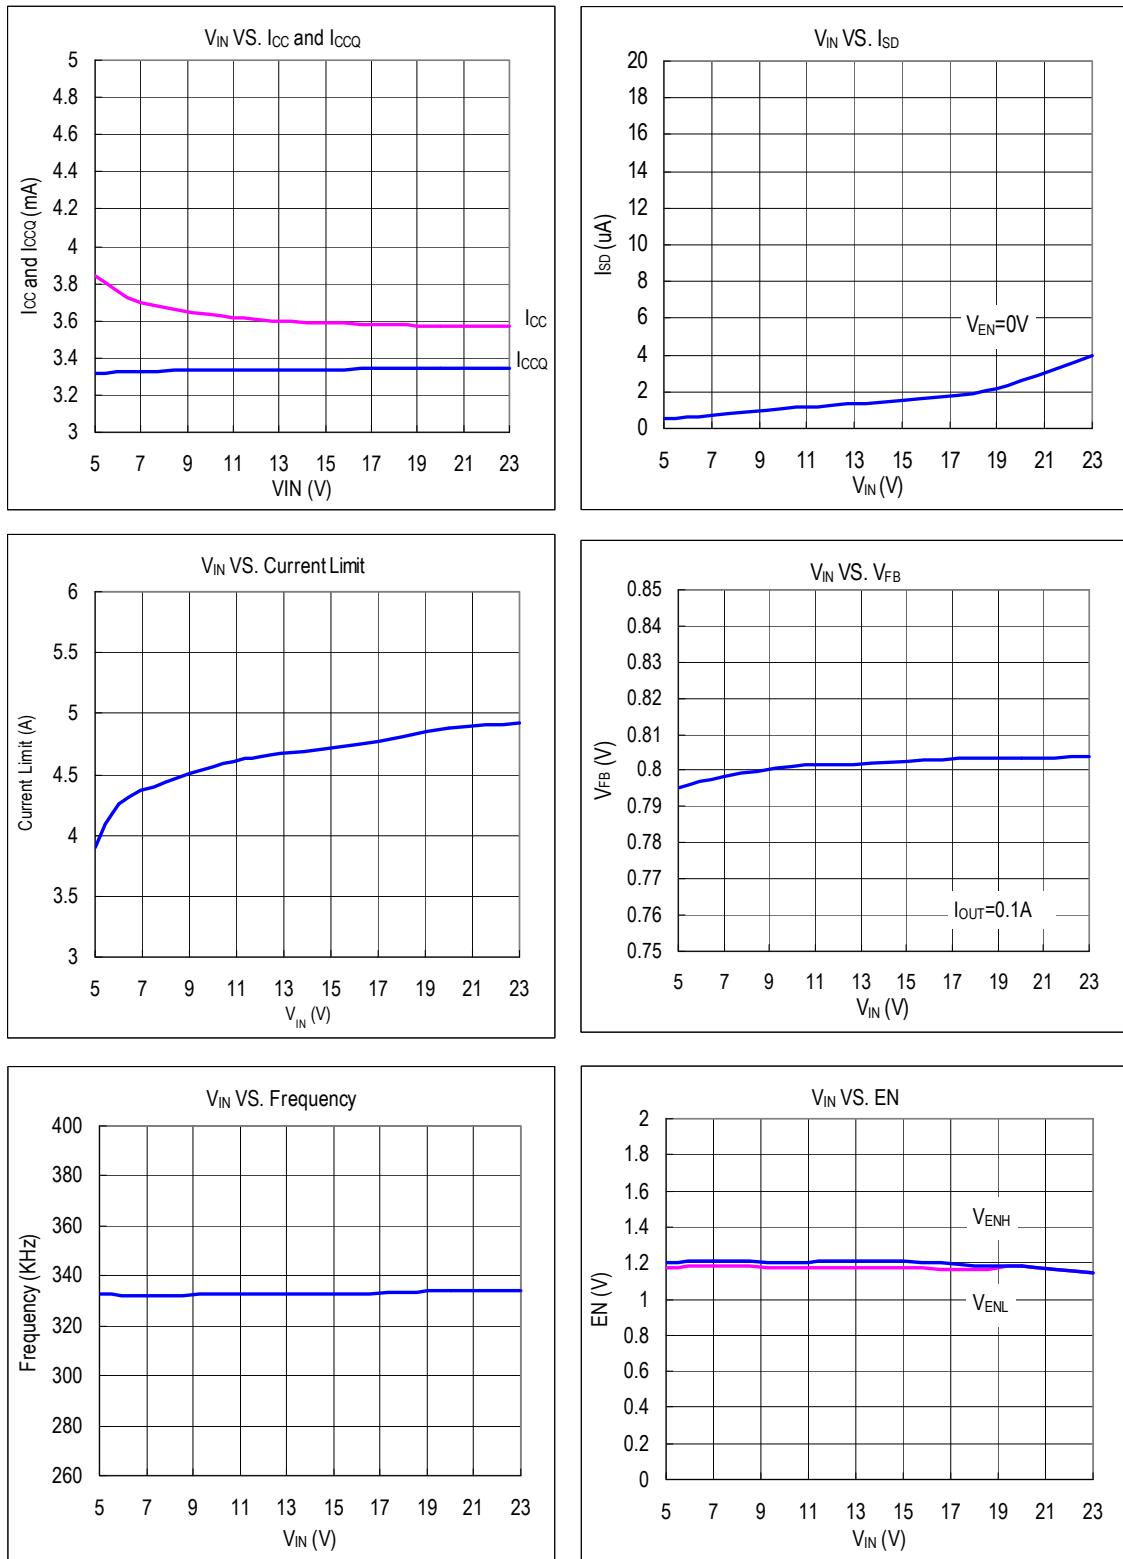

Application circuit item shows the basic application circuit with adjustable output version. The external resistor sets the output voltage according to the following equation:

$$V_{OUT} = 0.8V \times \left(1 + \frac{R_1}{R_2}\right)$$

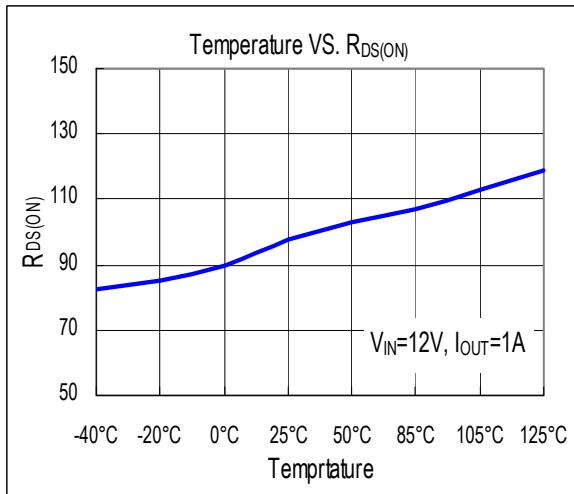

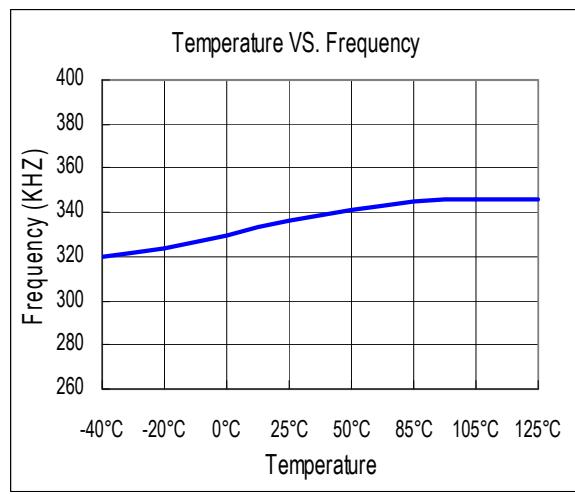

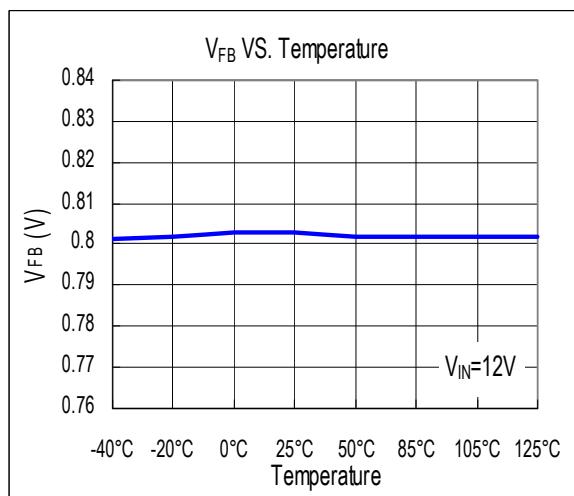

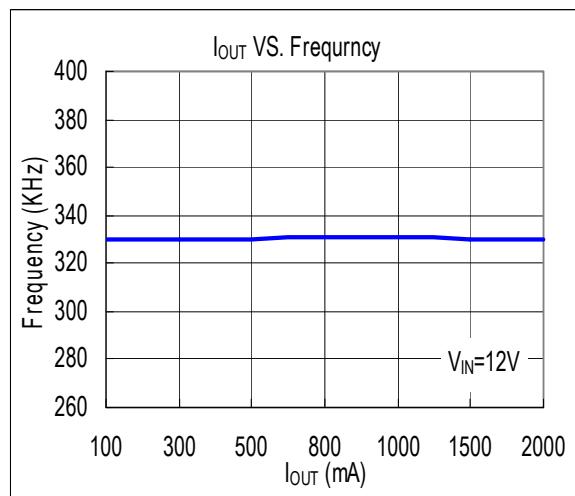

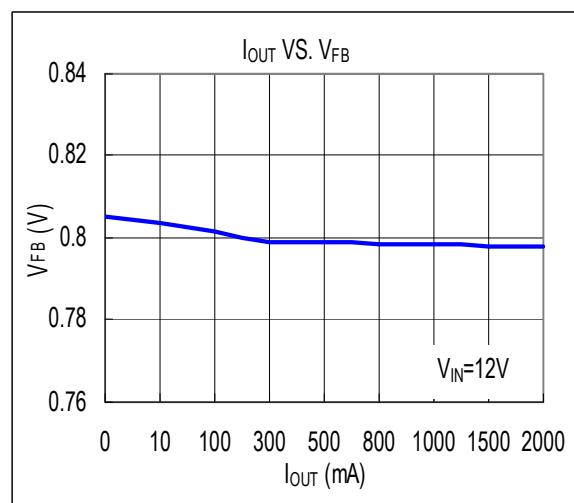

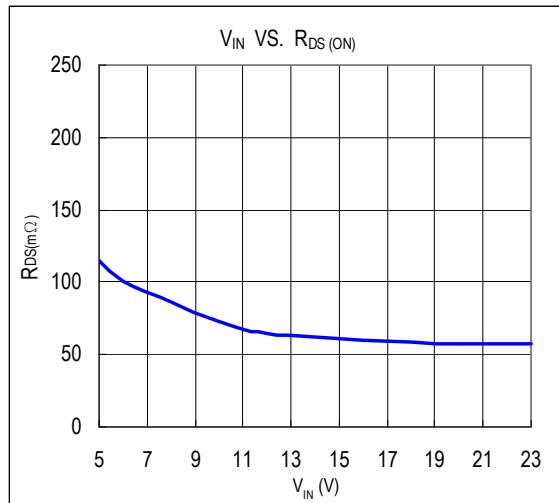

Table 1 Resistor select for output voltage setting

$V_{OUT}$	R2	R1
5V	1.3K	6.8K
3.3V	1.5K	4.7K
2.5V	2.2K	4.7K
1.8V	2K	2.5K
1.5V	2.2K	2.0K
1.2V	3K	1.5K
1.0V	3K	0.75K
