

Triode Type B 142

HF AMPLIFIER, OSCILLATOR AND MODULATOR

General. The valve type B 142 is a transmitting triode fitted with a thoriated tungsten filament. It is designed for use as high-frequency amplifier, oscillator, and Class B modulator.

Cooling. Requirements are indicated under Maximum Ratings for each class of service. Natural cooling means that adequate free circulation of air around the valve is necessary. When forced-air cooling is required, an air flow of 40 cu. ft. per minute from a 2-in. diameter nozzle directed vertically downwards on the anode seal is necessary. With forced-air cooling, bulb temperature in the vicinity of the anode seal must not exceed 145°C.

Mounting. Vertical. Filament posts up or down. Horizontal operation is permissible with the plane of electrodes vertical.

APPROXIMATE DATA

V_f	10	V
I_f	10	A
μ	35	
$f_{(max)}$ (at full ratings; natural cooling)	30	Mc/s
$f_{(max)}$ (at full ratings; forced cooling)	20	Mc/s
$f_{(max)}$ (at reduced rating, natural or forced cooling)	75	Mc/s
C_{a-g1}	5.6	pF
C_{a-k}	8.8	pF
C_{g1-k}	14	pF
