

Dual operational amplifier

BA4558 / BA4558F / BA4558N

The BA4558, BA4558F, and BA4558N are monolithic ICs with two operational amplifiers featuring low power consumption and internal phase compensation mounted on a single silicon chip. These products offer high speed, a wide band width, and low noise.

Outstanding thermal characteristics and voltage gain band width make these ICs ideal for use in a wide variety of electronic circuits. The BA4558 comes in an 8-pin DIP package and is compatible with the 4558 operational amplifier. The BA4558F comes in an 8-pin SOP package, and the BA4558N in an 8-pin SIP package.

●Applications

- Active filters
- Audio amplifiers
- VCOs
- Other electronic circuits

●Features

- 1) Low power dissipation of approximately 50mW (typ.).
- 2) Built-in output short-circuit protection circuit.
- 3) Internal phase compensation.
- 4) No latch-up.
- 5) Wide range of common mode and differential voltage.
- 6) High gain and low noise.

●Operation notes

(1) Unused circuit connections

If there are any circuits which are not being used, we recommend making connections as shown in Figure 9, with the non-inverted input pin connected to the potential within the in-phase input voltage range (V_{ICM}).
